The choir is paved with marble of four different colours, lozenge-wise, appearing cubical to the eye. Over the altar is a large and magnificent wooden arch curiously engraven, standing upon eight fluted columns of the Corinthian order. The east window is of painted glass, collected out of the several windows about the church; but so artfully joined, that they make throughout one regular and intire figure. The screen between the choir and the nef has been lately rebuilt of Roch-abbey stone, in the Gothic stile, and is deservedly esteemed one of the chief ornaments of the church. The body of the church is paved with the said stone, intermixed with black marble. The pulpit, reading-desk, and cover of the font, are all new, and of excellent workmanship: the galleries also are new, and beautifully finished, supported by columns of the Doric order. But not the least surprising thing in this pile, is the north end wall of the great cross isle, which hung over four feet; but was screwed up to its proper perpendicular by the ingenious contrivance of Mr. Thornton of York, joiner, made practicable by a gentleman of Beverley, now living, and approved of by Mr. Hawksmore. The admirable machine for this purpose was engraved by M. Fourdrinier, and printed for the benefit of his widow in the year 1739.

On the 13th of September, Anno 1664, upon opening a grave, they met with a vault of square free-stone fifteen feet long, and two feet broad: within it was a sheet of lead four feet long, and in that the ashes, and six beads (whereof three crumbled to dust with a touch; of the three remaining, two were supposed to be Cornelian) with three great brass pins, and four large iron nails. Upon the sheet lay a leaden plate, with this inscription, in capital letters:

Anno ab Incarnatione Domini MCLXXXVIII. combusta fuit hæc Ecclesia in mense Septembri, in sequenti nocte post festum Sancti Matthæi apostoli. Et in anno MCXCVII. sexto idus Martii, facta fuit inquisitio reliquiarum Beati Joannis in hoc loco: et inventa sunt hæc ossa in orientali parte sepulcri, et hic recondita; et pulvis cemento mixtus ibidem inventus est, et reconditus.

Thus translated:

In the year of our Lord's Incarnation 1188, in September, the night after the festival of St. Matthew the apostle, this church was consumed by fire; and in the year 1197, on the 10th of March, search was made for the reliques of St. John in this place; and these bones were found in the eastern part of the Sepulchre, and here again deposited; a mixture of dust and mortar was also found in the same place, and again deposited.

Over this lay a box of lead about seven inches long, six broad, and five deep, wherein were several pieces of bones mixed with a little dust, and yielding a sweet smell. All these things were carefully re-interred in the middle isle of the body of the Minster, with this inscription added, in capital letters:

Reliquæ eædem effossæ, et ibidem compostæ, fornice lateritio dignabantur XXVI. die mensis Martii Anno Domini MDCCXXVI. quando, v. tessellatum Ecclesie hujus pavementum primo fuit instauratum.

Thus Englished:

The same reliques which were dug up, and re-placed, were adorned with an arch of brick-work, on the twenty-sixth day of March 1726, viz. when the tessellated pavement of this church was first repaired.

Over it, directly upon the roof, is an inscription, to shew where the reliques are interred.

In this church are several monuments of the Piercies, earls of Northumberland, who have added a little chapel to the choir. On the right side of the altar-place stands the freed-stool, mentioned above, made of one intire stone, and said to have been removed from Dunbar, in Scotland, with a well of water behind it. At the upper end of the body of the church, next the choir, hangs an antient table with the picture of St. John the Evangelist (from whom the church is named), and of king Athelstan, the founder of it, and between them this distich:

Als free make I thee,
As heart can wish, or egh can see.

In the body of the church stands an antient monument, which they call the Virgins Tomb; because two Virgin Sisters lay buried there, who gave the town a piece of land, into which any freeman may put three milch kine from Lady-day to Michaelmas. At the lower end of the body of the church, stands a fair large font of aget-stone.

The mayor and aldermen being trustees for the revenues granted for the support of the fabric by king Edward VI. and queen Elizabeth, the greatest part of them was applied towards defraying the expences of the parish, and of the corporation; so that not a fourth part of the income was laid out in the repair of the Minster; which occasioned its running to decay. This misapplication Mr. Moyser put a stop to; and now the whole revenue, raised by him from one hundred and fifty pounds, to two hundred pounds *per annum*, is applied solely to the repair of the fabric.

Here was formerly a cloth manufacture; but at present the principal manufactures of this town are malt, tanned leather, and bone-lace, in which it more particularly carries on a considerable trade; and by which the poor people chiefly support themselves. This manufacture has of late met with considerable encouragement,

O o and

and the children of the charity school are all taught to work at it.

John, Archbishop of York, afterwards called St. John of Beverly, is said to have founded a convent of monks in the choir of St. John's church, in this town, which he dedicated to St. John the Baptist; likewise a college of seven secular canons, with seven clerks, in the nave of the church which he dedicated to St. John the Evangelist; and in a chapel dedicated to St. Martin, adjoining to this church he founded a society of religious virgins, or nuns; but about one hundred and sixty years afterwards, the religious here were murdered, and the church, and building plundered and burnt by the Danes. The church, however, was afterwards repaired, and endowed with revenues by king Athelstan, for seven canons, and was a flourishing collegiate society at the time of the dissolution.

Here was an hospital, founded, as is that, before the Conquest by one Wulfe, and dedicated to St. Giles. The income of this hospital was valued, upon the dissolution, at eight pounds *per annum*.

Sibylla de Valoniis, in the year 1201, founded here a preceptory of the order of the Knights Hospitalers of St. John of Jerusalem; and endowed it, at the suppression, with one hundred and sixty-four pounds, ten shillings *per annum*.

In this town was likewise an hospital of Black friars, before the year 1286. It was dedicated to St. Nicholas, and had yearly revenues at the suppression valued only at five pounds, fourteen shillings and six-pence.

Before the year 1300, here was a house of Franciscan friars; and likewise a house of Black friars, as early as the year 1311.

Here were two or three more hospitals, concerning which there are few particulars upon record.

Beverly sends two members to parliament, has two weekly markets held Wednesday and Saturday, and four annual fairs, viz. Thursday before Valentine, February the fourteenth, Holy Thursday, July the fifth, and November the fifth, for horses sheep and beasts.

At Watton, north of this town, there was a nunnery, about the year 686. Afterwards, about the year 1150, Eustace, the son of John Eustace, founded here a house of nuns of the order of St. Sempringham, dedicated to the Virgin Mary, and rated, upon the suppression, at three hundred and sixty pounds, sixteen shillings and ten-pence *per annum*.

At Meaux, near Beverly, William le Gros, earl of Albemarle, in the year 1150, founded a Cistercian abbey dedicated to the Virgin Mary, in which were fifty monks, at the time of the general suppression, and endowed with annual revenues to the amount of two hundred and ninety-nine pounds, six shillings and four pence *per annum*.

At Killingwald-grove, near Beverly, was an hospital chiefly for women, before the year 1169. It was dedicated to St. Mary Magdalen, and valued, upon the dissolution, at thirteen pounds, eleven shillings and two pence *per annum*.

About a mile east of Beverly is a spaw, which is said to be of great service in the cure of scorbutic and other cutaneous disorders.

Headon, the next town we visited, is likewise called Hedon, or Heydon. It is a small borough town, well built, and pleasantly situated on a small stream near the Humber, one hundred and seventy-two miles from London; and governed by a mayor, a recorder, nine aldermen, and two bailiffs, who have the power of sheriffs, and justices of the peace. Here is a prison, and formerly there were three churches; but they are now reduced to one. This town was once of considerable note for its merchants and shipping; but its harbour has been many years choaked up by the æstuary of the Humber.

In the church are the pictures of a king and a bishop, with an inscription little differing from that at Beverly.

Alls free make I thee,

As heart may think, or eigh see.

About the beginning of the reign of king John, Alan the son of Oubern, founded an hospital here,

dedicated to the Holy Sepulchre, for a master, and several brethren or sisters, lepers; which was valued, upon the suppression, at thirteen pounds, fifteen shillings and ten pence *per annum*.

This town sends two members to parliament, has a weekly market on Saturday, and fairs every fortnight, besides the four following, which are held annually, viz. February the fourteenth, August the second, September the twenty-fifth, and November the seventeenth, for pewter, tin, leathern wares and millinary goods.

At Swine, north of Headon, Robert de Verli, before the end of the reign of king Stephen, founded a religious house, consisting of a prioress, and fourteen or fifteen nuns, of the Cistercian order. It was dedicated to the Virgin Mary, and endowed, upon the dissolution, with eighty-two pounds, three shillings and nine-pence, *per annum*.

From Headon we proceeded to Patrington, a very ancient corporate town, in a very pleasant situation, near the mouth of the Humber, one hundred and seventy-one miles from London. It was the Prætorium of Antoninus, and here the Roman way from the Picts wall terminates. It has nothing at present, except a weekly market on Saturday, and two annual fairs, viz. March the twenty-eighth, and July the eighteenth, for toys.

A little to the south of this town, is Spurnhead, a famous promontary, called by Ptolemy, Promontorium Ocellum. The western side of this head-land is full of villages, but the other has nothing remarkable.

At Burstalgarth, south-east of Patrington, Stephen, earl of Albemarle, founded in the year 1115, a priory of Benedictine monks, which was a cell to the monastery of Alceio, near Albermarle, in Normandy.

At Newton, near Patrington, William Gros, earl of Albermarle, who died in 1199, founded an hospital, and dedicated it to St. Mary Magdalen. At the suppression its annual revenues amounted to forty pounds.

At Withernsey, north-east of Patrington, was a priory subordinate to the abbey of Albemarle, in France, so early as the reign of king John.

Leaving Patrington we continued our tour to Hornsey, a small town almost surrounded by a small arm of the German ocean. Here is a church with a high steeple, which is a common and useful sea mark; and not many years ago, a street, called Hornsey-bec, was entirely washed away by the sea, except two or three houses. It has a weekly market on Saturday, and two annual fairs, viz. August the twelfth, and December the seventeenth, for horses and black cattle.

At Nunckling, near Hornsey, Agnes de Arches, founded, in the time of king Stephen, a priory for Benedictine nuns, and dedicated it to St. Mary Magdalen, and St. Helen. It continued till the dissolution, when it was valued at thirty-five pounds, fifteen shillings and five-pence *per annum*.

From Hornsey we crossed the county to Wighton, supposed to have been the Delgovitia of the Romans. It stands near the river Foulness, one hundred and eighty miles from London; but has now nothing remarkable, except a weekly market on Wednesday, and two annual fairs, viz. May the fourteenth, and September the twenty-fifth, for horses and sheep.

Pocklington, the next town we visited, is situated on a small stream, which, a little below the town, falls into the Derwent, one hundred and eighty-three miles from London. It has nothing remarkable except a weekly market on Saturday, and seven annual fairs, viz. February the twenty-fourth, April the twenty-fifth, July the twenty-fourth, and October the twenty-eighth, for cattle, cheese, cloth, and leathern ware; in seven days before St. Matthias, December the seventh, and seven days before Christmas day, for horses, &c.

At Tockwith, near Pocklington, Jeffrey Fitz-Pain, about the year 1114, founded a priory subordinate to the monastery of Nofhell. It continued till the general suppression of religious houses, when it was valued at eight pounds *per annum*.

At Wilberfoss, on the west of Pocklington, was a Benedictine

nedictine nunnery, said to have been founded by Alan de Cotton, before the year 1153. It was dedicated to the Virgin Mary, and about the time of the dissolution had a prioress and 12 nuns, whose yearly revenues amounted to twenty-one pounds sixteen shillings and ten-pence.

At Burnholm, east of Pocklington, was a Benedictine nunnery, in which not long before the dissolution, were eight religious, whose yearly income was valued at eight pounds one shilling and eleven pence.

From Pocklington we passed to Kilham, situated in the York moulds, one hundred and ninety-eight miles from London. It is about four furlongs in length, and is situated in a country very fertile in corn. Here is a weekly market on Thursday, and two annual fairs, viz. August twenty-first, and November twelfth for horses and black cattle.

At Lowthorp, near Kilham, was a collegiate body, or large charity, consisting of a rector, six chaplains, and three clerks, founded in the church of this place in the beginning of the reign of Edward III.

Bridlington, or Burlington, the next place we visited, is situated on a bay or creek of the German ocean, reckoned a safe harbour in storms at north-west and north-east, two hundred and five miles from London. Bridlington is about five furlongs in length, and has a great trade, and a key, which lies near two miles from the town, and is chiefly inhabited by sea-faring people.

Bridlington bay was the Eulimenora Gabrantovicorum, mentioned by Ptolemy, which signifies the good port or harbour of the Gabrantovici, an ancient tribe of Britons, who inhabited these parts.

William de Grant, in the reign of king Henry I. founded here a priory of Black canons, dedicated to the Virgin Mary, and endowed at the dissolution, with yearly revenues amounting to five thousand four hundred and seven pounds six shillings and eleven pence.

This town has a weekly market on Saturday, and two annual fairs, viz. Monday before Whitsuntide, and October the twenty-first, for linen cloth and toys.

At Boynton, not far from Bridlington, Sir George Strickland has established a woollen manufacture. In this part of the country, the poor have no other employment than what results from a most imperfect agriculture; consequently three-fourths of the women and children were without employment. It was this induced Sir George to found a building large enough to contain on one side a row of looms of different sorts, and on the other a large space for women and children to spin. The undertaking was once carried so far as to employ one hundred and fifty hands, who made very sufficient earnings for their maintenance; but the decay of the woollen exportation reduced them so much, that now those employed, are under a dozen.

The NORTH-RIDING.

This riding is the northern boundary of the other two; and the air here is colder and purer than in either of them: the eastern part of this Riding, towards the ocean, is called Blackmoor, and consists of a hilly, rocky, woody country; and the north-west part, called Richmondshire, from Richmond a borough town, the capital of the district, consists of one continued eminence, or ridge of rocks, and vast mountains, the sides of which yield good grass, and the vallies at the bottom are very fruitful; the hills feed deer of a very large size, and likewise goats; and contains mines of lead, copper, alum stone and coal, but the coal and alum mines only are wrought. Swale-dale abounds with fine pasture; and Wentefdale, watered by the Ure, is a rich fruitful valley, abounding with wood, and stocked with vast herds of cattle. Towards the sea coast are found great quantities of jet; and at Egglestone, north-west of Richmond, there is a fine quarry of marble. The sea near this coast swarms with herring, in the herring season; and large turbot and great variety of other fish are caught here; the rivers abound with all sorts of fresh-water fish, and the Ure is remarkable for cray fish.

Remarks on the HUSBANDRY of the NORTH-RIDING.

The husbandry, like the soil of this Riding is very different in different districts.

About Nunnington the soil is chiefly limestone land; the open fields let at, from two shillings and six-pence to four shillings, and the inclosures from seven to ten shillings. Farms are from thirty to ninety pounds a year. Their course is,

1. Fallow
2. Wheat
3. Barley
4. Fallow
5. Rye
6. Oats.

They plough four times for wheat, sow ten pecks, and reap, on an average, sixteen bushels. For barley after a fallow, they plough four times; but when an after-crop but twice, sow ten pecks; the mean crop, three quarters. They give but one stirring for oats, sow four bushels, and gain about thirty. They sow but few beans, their method is to plough once, sow five or six bushels broad-cast, never hoe them, the crop three quarters; use them for hogs and horses. For pease they plough but once, sow ten pecks, never hoe: the average produces fifteen or sixteen bushels. They give four ploughings for rye, sow six or seven pecks, and reap about three and a half quarters. As to turnips they cultivate so few, that no general account can be given of them. Clover they sow with barley, and mow the first crop; of which they get about two tons of hay: Wheat succeeds it.

Their manuring consists chiefly of the dung arising from their farm-yard, but they never litter it with chopt stubble, holding it like their neighbours of Newton, better to leave on the land than convert into manure. They carry their dung directly from the yard on to the land without laying in heaps. Of lime, they use large quantities, lay three chaldrons (at seven shillings each) per acre on their fallows, in June or July, every third year. It does much good on limestone land, but more on clay.

Good grass lets at ten shillings an acre; they use it chiefly for dairying and breeding; a cow requires two acres for her summer food, and yields about five pound *per annum* product. In the height of the season a good one will give as high as eight gallons a day, but four or five in the common quantity. Three, do not more than maintain one hog. Their winter food is straw and hay. Their calves they suffer to suck but a week, if to be reared; but six weeks to fat. They reckon that a woman and a girl can take care of a dairy of twenty cows. If the cows are tied up in the house all winter, they eat three loads of hay; but abroad two loads will serve them. The wintering price is from thirty, to thirty-five shillings; that of summer, the same.

The size of their flocks of sheep is from twenty to eighty; the profit from seven shillings, to ten shillings, a head. The winter keeping, two shillings and two shillings and threepence. They would be ready to give ninepence a week *per head*, through the month of April. The average weight of wool *per sheep*, five pounds weight.

In their tillage, they reckon six horses necessary to fifty acres of arable land: They use four horses and two oxen in a plough, and do an acre a day. The former they calculate, cost them four pound five shillings *per annum* each at an average. The joint in summer is from twenty-five shillings, to thirty shillings. In winter, one shilling a week. Their oxen they keep in winter on straw and work them on it, but if hard, give them hay. Horses they reckon do the work best, but it is cheapest done with oxen. The price *per acre* of ploughing is, four shillings and sixpence.

They reckon that four years rent is necessary to hire a farm of half grass and half arable..

Price of LABOUR.

- In harvest, 1s. a day and board.
- In hay time, ditto.
- In winter, 6d. and ditto.

Mowing

Mowing grafs, 2 s.

Thraffing wheat, 1 s. or 1 s. 2 d. a quarter.

Head-man's wages, 11 l. to 14 l.

A ploughman's 5 l. 10 s.

A boy of 10 or 12 years of age, 3 l. or 4 l.

A dairy maid, 4 l. or 5 l.

Other maids, 3 l. or 4 l.

Women *per day*, in harvest, 9 d.

In hay-time, 6 d.

In winter, 2 d. and board.

About Gisborough, land lets from eleven to fifteen shillings, *per acre*; farms are from twenty, to sixty pounds; but such as Mr. Turner has regulated, from eighty, to one hundred and twenty pounds. Their courses are,

1. Fallow

2. Wheat

3. Oats.

Another,

1. Fallow

2. Wheat

3. Peafe or beans.

Or,

1. Fallow

2. Barley

3. Oats.

They plough five times for wheat, sow two bushels, and reap upon an average twenty-five. For barley they stir six or seven times, sow two bushels or ten pecks, and gain five quarters. They give but one ploughing for oats, sow four bushels, and gain on an average five quarters. For peafe and beans, they stir but once, sow from four to five bushels, broad-cast, never hoe; the crop about thirty bushels. Use them only for horses. They cultivate very few turnips, plough three or four times, never hoe. The value from two, to four pounds; they are fed off with sheep. They sow a little rape, plough but once after paring and burning; sow about half a peck, and gain about half a last. They then lime the rape stubble, and sow wheat. They know nothing of clover.

As to manure, their ideas are but imperfect: all they know of farm-yard dung, consists in the feeding their cattle with straw; for their hay, they stack about the fields, and never chop their stubbles. They lime every fallow, with about a chaldron and a half *per acre*; cost and leading twelve shillings a chaldron.

Their method of breaking up grafs lands, is by paring and burning; the paring costs twelve shillings, and the burning eight shillings.

They have tried sea sand in small quantities upon clay: it answers well, but is expensive.

Sea-weed they sometimes use; they either lay it on the land as they collect it; or make heaps of it till rotten; but in general they reckon it best fresh.

Very good grafs lets for twenty-five shillings an acre; apply it chiefly to dairying, and reckon that one acre is sufficient to carry a cow through summer, but of the common grafs at twelve shillings an acre, two are necessary. In feeding, they reckon five sheep equal to a cow. Their yard dung they are generally obliged to lay on to their grafs lands. A milch cow, they reckon requires more grafs than a beast of the same weight.

The product of their cows is five pounds *per head*; they give in the prime of the season ten, eleven, or twelve quarts of milk at a meal, or about five gallons a day. In fattings, they reckon a beast of fifty stone, will yield five pounds profit, and by breeding cattle, from two to three pounds *per head*. In winter they feed their cows on straw while dry, but afterwards on hay. Their calves never suck at all. The joist of a cow in summer is from one pound, five shillings, to one pound fifteen shillings; and in winter, three pounds. The wintering a fat ox, they reckon worth five pounds.

The size of their flocks of sheep is from twenty to sixty; the breed the large Teefwater; fat wethers have been sold at fifty-five pounds a score. The profit *per head*, they reckon from nine to thirteen shillings.

The keeping through April, they value at one shilling a head *per week*. The weight of wool, from six to ten pounds weight.

In the management of their tillage, they reckon ten horses necessary for the cultivation of one hundred acres of arable land. They use two or three in a plough, two double, but three at length; a driver in the first case, but none in the second; and generally plough an acre a day. The expence *per horse per annum*, eight pounds. The joist in summer, two pounds. The price of ploughing *per acre*, five shillings. They know nothing of chopt straw for chaff.

In general, they reckon from two to four rents necessary for stocking of farms.

Land sells, old rents, up to sixty years purchase, others at thirty-five. Tythes are in general gathered, but if compounded, wheat pays five shillings, spring corn three-shillings, and grafs from one shilling to three. Poor rates run, from six-pence to two shillings and six-pence in the pound, real rents, no variation between real and supposed.

Price of LABOUR.

As to the price of labour, the variation between the times of peace and war amounts to one hundred *per cent.* for the press for sailors makes all the boys in the country be cleared off for apprentices, and the whole by that means drained; insomuch that the work sometimes can scarcely be done. Pressing is carried to so infamous a height, that many landmen have been taken out of their beds in the middle of the night.

In harvest, from 1 s. to 2 s. 6 d. *per day*.

In hay time, 1 s. 6 d.

In winter 10 d.

Reaping wheat *per acre*, 5 s.

— spring corn, 4 s.

Mowing grafs, 1 s. 8 d.

Repairing hedges and ditches, 2 d. to 8 d. a rood.

Threshing wheat 3 d. a bushel.

— barley, 1 d. ½.

— oats, 1 d.

— beans, 2 d.

Headman's wages, 12 l. or 13 l.

Second ditto, 10 l.

Boy of ten or twelve, 3 l.

Dairy maids, 5 l.

Other maids, 4 l.

Women *per day* in harvest, from 10 d. to 2 s.

— in hay time, 8 d.

— in winter, 4 d.

The chief manufactures of this Riding are cloths, stockings, and alum.

Malton, the first town we visited on entering this Riding, is divided into two parts by the river Derwent, which are called old and new Malton. The old is the Camalodumum of the Romans, and was burnt by Thurstan, archbishop of York, in King Stephen's cause, against Eustace the lord of it, who had betrayed parts of this country into the hands of the Scots; but Eustace being afterwards received into favour, rebuilt it; since which time it has always bore the name of New Malton; It is distant from London one hundred ninety-nine miles; and is a borough by prescription, governed by a bailiff. The two towns have a communication by means of a good stone bridge over the river; they measure together about four furlongs in length and have three handsome parish churches. Malton is a populous place, and being situated in the road between York, Whitby and Scarborough is well provided with good inns.

Eustace Fitz-John, in 1150, built and endowed a priory of Gibbertre cannons at Old Malton dedicated to the Virgin Mary, and endowed upon the suppression, with one hundred and ninety-seven pounds nineteen shillings and two pence *per annum*.

Malton sends two members to parliament; has two weekly markets, held Tuesday and Saturday; and four annual fairs, viz. Saturday before Palm-Sunday, for horses and horned cattle; the day before Whit-Sunday,

for

cliff nearest the Spaw stood as before, but were rent and broken in many places, and forced forward to the sea. The ground, when sunk, lay upon a level; and the cattle next morning were still feeding on it, the main land being as a wall on the west, and some part of the side of the cliff as a wall to the east; but the whole, to view, gave such a confused prospect, as could hardly be described.

The rent of the top of the cliff aforesaid, from the main land, was two hundred and twenty-four yards. The rent continued from each end, down the side of the cliff to the sands, was measured on the sands from one end to the other, one hundred and sixty-eight yards; viz. one hundred and forty-three south of the Staith and Spaw wells, and one hundred to the north of the Spaw.

As the ground sunk, the earth, or sand, on which the people used to walk under the cliff, rose upwards out of its natural position, for above one hundred yards in length, on each side of the Staith, north and south; and was in some places six, and in others seven yards above its former level. The Spaw wells rose with it; but as soon as it began to rise, the water at the Spaw well ceased running, and was gone.

The ground thus risen was twenty-six yards broad; the Staith, which was computed at two thousand four hundred and sixty-three tons, rose entire and whole, twelve feet higher than its former position (but rent a little in the front), and was forced forwards towards the sea, twenty yards.

The most reasonable account then given for this phenomenon, and the occasion of the destruction of the Staith, and Spaw house, and the loss for some time of the Spaw spring, is as follows:

When this Staith, or wharf, was lately rebuilt (it being thrown down by the violence of the sea), the engineer for the building of the new pier at Scarborough, was desired to rebuild this Staith at the Spaw; and, digging a trench to lay the foundation thereof, with great difficulty clear'd it of water; and when he had done it, could, at several parts thereof, very easily thrust his stick or cane up to the handle; from whence it is concluded, that all the earth under the Staith was of a porous, spongy, swampy nature, and was much the same below the foundation of the Spaw house, and under the sides of the cliff, adjoining, as well north as south.

The solid earth, sinking on the top of the cliff, which was so vast a weight, as by computation to amount to two hundred sixty-one thousand three hundred and sixty tons; which pressing gradually upon, and into the swampy, boggy earth beneath it, of course raised the earth and sands, and by this means effected the mischief.

Very fortunately however for the town, after diligent search, and clearing away the ruins, the Spaw was again recovered, and the water upon trial seemed to be more efficacious than before.

Hugh de Balemere, in the time of Henry II. founded an hospital here dedicated to St. Thomas the Martyr; and much about the same time, here was another hospital founded by the burgesses of this town, and dedicated to St. Nicholas.

Before the fourth year of king John, here was a cell of monks belonging to the abbot and convent of Cistercium in France.

About the year 1240, here was a house of Greyfriars; and a house of Black friars, before the year 1285.

King Edward II. in the year 1319, founded here an house of Carmelite friars.

Scarborough sends two members to parliament; has two weekly markets on Thursday and Saturday, and two annual fairs, viz. Holy-Thursday, and November the twenty-second, for toys.

At Flixton, south of this town, there was an hospital erected in the time of king Athelstan, by one Archorn, a knight, for an alderman and fourteen brothers and sisters. It was dedicated to the Virgin Mary and St. Andrew.

We came next to Pickering, a pretty large town, situated on a hill among the wild mountains of Black-moor, two hundred and twenty-six miles from London,

It belongs to the duchy of Lancaster, and has a jurisdiction over several neighbouring villages, with a court for all actions under forty shillings; arising within the manor of Pickering.

It was formerly fortified by a castle, the ruins of which are still to be seen. Here was also once an hospital, dedicated to St. Nicholas.

This town has a weekly market on Monday, and two annual fairs, viz. Holy Rood-day, and September the fourteenth, for horned cattle, horses and sheep.

At Wickham, east of Pickering, Pain Fitz-Osbert, or de Wickham, about the year 1153, built and endowed a priory of Cistercian nuns, dedicated to the Virgin Mary. At the time of the dissolution here were nine religious, endowed with yearly revenues valued at twenty-five pounds, seventeen shillings and six-pence.

At Little Maries, south-east of Pickering, Roger de Clare, before the year 1163, founded a small nunnery for eight or nine nuns of the Benedictine order dedicated to the Virgin Mary, and endowed on the general dissolution, with twenty-one pounds, sixteen shillings and six-pence *per annum*.

From Pickering we proceeded to Kirkby-Morefield, originally called only Kirkby, the epithet Morefield, having been annexed to it, from its situation on the side of Black-moor, in the North-Riding of this county, and to distinguish it from many other towns in the north of England, called Kirkby. It is one hundred and ninety-eight miles from London, and is an obscure place, containing nothing worthy of notice, except a weekly market on Wednesday, and two annual fairs, viz. Whitfun-Wednesday, for black cattle and horses; and December the eighteenth, for sheep, linen, and woollen cloth.

At Keldam, near Kirkby-Morefield, Robert Stuteville, in the time of Henry I. founded a Cistercian abbey, dedicated to the Virgin Mary, and endowed, upon the dissolution, with yearly revenues to the amount of twenty-nine pounds, six shillings and one penny.

From hence we continued our journey to Helmesley, a small inconsiderable town, of no note, one hundred and ninety-seven miles from London. The houses however are tolerably well built, and covered with slate. Here is a weekly market on Saturday, and four annual fairs, viz. May the nineteenth, July the sixteenth, October the second, and November the sixth, for horses, black cattle, sheep, linnen and woollen-cloth.

At Eastness, a village near Helmesley, was found a stone tomb full of bones, and on the top stone was the following inscription: TITIA' PINTA' VIXIT' ANN' XXXVIII.' ET VAL. ADVTORY' VIXIT' ANN. XX.' ET VERIALO' VIXIT' ANN.' XV.' VAL' VINDICIANVS CONIUGIE' T' FILIS' F. C.

At River, near Helmesley, Walter Espec, in the year 1131, founded an abbey of the Cistercian order, dedicated to the Virgin Mary, and endowed at the dissolution with two hundred and seventy-eight pounds, ten shillings and two-pence *per annum*.

In the neighbourhood of Helmesley lies Duncombe-park, the seat of ——— Duncombe, Esq. the place in this country by far the most worthy the attention of the curious traveller. The house is a very good one, the collection of pictures truly capital, and the ornamented ground some of the most beautiful in England. First then to begin with the house.

The hall is a well proportioned room of sixty feet by forty, surrounded by fourteen large Corinthian pillars of Ionic, and ornamented by several statues, &c. among which are,

Jupiter.
Mercury.
Minerva.
Mars.
Venus.
Diana.

The saloon of eighty-seven feet by twenty-five, is a handsome room, thrown into three divisions by some pillars. Here are four statues, brought lately from Italy.

Apollo.

P. Panini. Three of architecture, fine.

Holbein. Queen Mary.

The chimney-piece is of modern and antique mosaic. The slabs are of antique porphyry; and the cabinet very beautiful, of the finest pebbles, &c. &c.

In other rooms;

Canaletti. View of Venice.

P. Panini. Ruins.

Snyders. Game and garden-stuff.

Stag-hunting; fine.

Holbein. Harry VIII.

Thomas duke of Norfolk.

Rembrandt. Venetian nobleman, very fine.

Rubens. A head. Also Thomas, earl of Arundel. Very fine expression.

Vanderveldt. Shipping.

An *Ecce Homo*, exceeding fine.

Vandyke. Tenth earl of Northumberland.

Paul Veronese. A Roman courtesan.

Vandyke. King Charles.

Sigismunda; the Venetian school.

The mausoleum in the park is a circular building, finishing in a dome, surrounded by a colonnade of Tuscan pillars. Over the vault is an elegant circular dome-room, called a chapel, thirty feet diameter, by sixty-nine high. Eight Corinthian pillars support the cornice over which the dome rises, mosaic'd in squares, with a rose in each. The ornaments in carving of the whole room light and pleasing. The floor is in different compartments, inlaid with marble, and *a la Grec'd* with brass. There is a very fine table of antique mosaic.

The Ionic temple in another part of the park has four porticos. It is a handsome room, fitted up chiefly with marble. The cornices of the door-cases are supported by Ionic pillars of black and gold marble; and in the corners of the room are pilasters of the same. In niches over the doors are busts of

Vespasian,
Faustina,
Trajan, and
Sabina.

The room finishes in a dome, which is ornamented in white and gold; the floor in compartments of different marbles, antiques, &c. very elegant; but the windows are trifling and mean.

Besides these, there are several other ornamental buildings about the park, &c. but all in so heavy and clumsy a stile, as to be perfectly disgusting. Even the mausoleum is far enough from being free from these objections. It is not very light in itself, but the steps up to the chapel, and the walls that surround it in the fortification stile, are detestable. The Ionic temple is a cluster of porticoes; the bridge is heavy, and even ugly; and the rest of them, except a small dome temple, with a statue of Venus in it, all terminate in triangular pyramidal forms, much in the stile of being hewn out of a real rock. We should not, however, forget to remark, that the inn, although deficient enough in beauty, is an excellent one; the rooms and all the offices large and convenient.

After viewing this beautiful seat, we continued our journey, and arrived next at Scarborough, which, by the Saxons was called Scarburg, from its situation, a borough on a rock.

It is a very ancient borough, two hundred and four miles from London; and governed by two bailiffs, a recorder, common-council men, and other officers.

This town is situated on a high steep rock, surrounded by the sea, except on the west side, where it is connected with the continent by a narrow slip of land. The houses are strong and well built, opposed in form of a half moon to the main ocean, and extending irregularly on the declining side of the rock. This town, the situation of which is romantic, was formerly defended by a strong castle, founded by William le Gros, in the time of king Stephen, and repaired and enlarged afterwards by king Henry II. but demolished in the late civil wars. The summit of this hill contains no less than eighteen or twenty acres of meadow ground. Here is a commodious key, and the best har-

bour between Newcastle and the Humber, for receiving ships in stress of weather; on which account the pier here is maintained at the public charge, by a duty upon coals from Newcastle and Sunderland. The mariners of this town have erected an hospital for the widows of poor seamen; which is maintained by a rate on the vessels of this port, and by deductions out of the seamen's wages.

This place has a good trade; and a great number of ships, chiefly employed in carrying coals from Newcastle to London. Herrings are caught here in great plenty, from the middle of August to November, with which this town supplies the city of York; as it does also with cod, mackarel, turbot, and a variety of other fish.

But the state of this town must be, in a great measure, ascribed to the vast number of people of all ranks; that flock hither in the hot months to drink the waters of a medicinal spring, which rises at the foot of an exceeding high cliff, about a quarter of a mile south of the town. It is in a sandy soil, near the level of the spring tides, by which it is often overflowed. The water of this spring is very transparent, and of a sky-colour; it has a pleasant acid taste, an inky smell, and is found to be impregnated with iron, vitriol, alum, nitre, and salt. It is purgative and diuretic, and is recommended for removing obstructions, and for disorders that proceed from too slow a motion of the blood; it attenuates gross, fizy, and mucous humours; and it sheaths, sweetens, and hastens the expulsion of all acrid, and other sharp humours: it is therefore found beneficial in the jaundice, in inflammations, or a schirrus, in the spleen, in hysterical cases, in a cachexy, in an incipient dropy, in preventing apoplexies, palsies, and lethargies; in arthritic and rheumatic disorders; in head-achs, asthma, catarrhs, habitual costiveness, and many other complaints.

At the season of drinking the waters, here are assemblies and balls, in the same manner as at Bath and Tunbridge.

The unfortunate and extraordinary affair that happened in December 1737, whereby this famous spaw had like to have been lost, deserves particular mention.

The situation of the spaw, as we have before observed, lays south from the town, on the sands, and fronting the sea to the east, under an high cliff on the back of it, west; the top of the cliff being above the high-water level, fifty-four yards; and all about a quarter of a mile from the town.

The staith or wharf adjoining to the spaw-house, was a large body of stone, bound by timbers, and was a fence against the sea, for the security of the house; it was seventy-six feet long, and fourteen feet high, and in weight, by computation, two thousand four hundred and sixty-three tons. The house and buildings were upon a level with the staith; at the north end of which, and near adjoining to it, upon a small rise above the level sands, and at the foot of the stairs that lead up to the top of the said staith, and to the house, were the Spaw wells.

On Wednesday, December the twenty-eight, in the morning, a great crack was heard from the cellar of the Spaw house; and, upon search, the cellar was found rent; but, at the time, no farther notice was taken of it.

The night following, another crack was heard; and in the morning the inhabitants were surpris'd to see the strange posture it stood in, and got several gentlemen to view it, who, being of opinion the house could not stand long, advis'd them to get out their goods; but they still continued in it.

On Thursday following, between two and three in the afternoon, another crack was heard, and the top of the cliff behind it rent two hundred and twenty-four yards in length, and thirty-six in breadth, and was all in motion, slowly descending; and so continued till dark. The ground thus rent contained about an acre of pasture-land, and had cattle then feeding upon it, and was on a level with the main land, but sunk near seventeen yards perpendicular. The sides of the cliff

A crucifix in ivory, very finely worked.
 The pictures are,
Rubens. Three heads.
Raphael. A Cartoon, in blue and white. The attitudes and expression finely varied.
Wouvermans. Horsemen.
Stone. (After *Raphael*) Holy Family.
Ph. Laura. Venus and Europa. Middling.
Brughe. Two landscapes.
Nief. Four of architecture.
Old Frank. Hand-writing on the wall.
Bassan. Two pieces. A rock with light behind it; fine: and an old woman's head; ditto.
Vandervelt. Other sea-pieces.
Vanlynt. Daphne and Apollo. Under it two landscapes, fine. Master unknown.
Bassan. Dead Christ.
Polemburgh. Landscape. Good.
Ricci. A water-fall; the tree well done.
 A Galatea in an antique Mosaic.
Mumper. Rocks.
Tenias. Two pieces; good.
Heemskirk. A groupe of figures.
Bugden. Grapes, flowers, &c.
Rembrandt. A grotto.
Mumper. Cupid and Psyche. Rocks and falls of water.
Griffier. Two pieces; skating. Good. A landscape. Trees, boats, and figures; excellent.
Artois. Landscape; fine.
Bugden. Fruit and flowers; good. The butterfly, fine.
Bassan. David and Goliath.
 Companion to ditto.
Griffier. Two sea-pieces.
 To the right of the saloon are the following rooms.
 The drawing-room, twenty eight by twenty four. Over the chimney.
Carlo Marrat. Portrait of Cardinal Howard, exceedingly fine.
 Two busts;
 Justinian, and
 Severus.
 Two very curious slabs of flowered alabaster; one of red porphery; two pillars of green porphery. Upon the chimney the following antique bronzes:
 Apis.
 An owl.
 The head of a Roman standard:
 The tapestry is from the designs of *Rubens*, and fine.
 In another drawing, thirty by twenty-four, are,
 Busts;
 Julia, elegant.
 Poppæa.
 Agrippina; drapery fine.
 Bronzes.
 Hercules and Anteus.
 Centaur and Dejanira; and
 A Pallas of oriental alabaster.
 Geta.
 Nero.
 One unknown.
 The pictures are,
Ricci. A shipwreck.
 Landscape; a snow piece; good.
Lely. Queen Catherine.
 Here likewise is a very curious cabinet of precious stones; two slabs of verd antique; and one of antique black and white.
 The state bed-chamber, twenty-eight by twenty-four. The chimney-piece in this room is very elegant; the cornice of white marble. In the center of the frieze, pigeons in white marble, polished. The supporters, Corinthian pillars, the shafts Siena marble; the capitals and bases of white: upon it stands Jupiter Serapis. In the ornaments above, the marriage of the sea, by *Canaletti*; in which the water is by no means equal to the representation of it in many of his works. The room is hung with excellent Brussels tapestry, done after the designs of *Teniers*.

Dressing-room, thirty by twenty-four. Here are two very fine slabs of blood jasper; another exceedingly elegant; an oval of agate surrounded by modern Mosaic. Upon the chimney-piece, which is an elegant one of white marble, are the following:
 Bronzes.
 Venus.
 Mercury.
 A horse.
 The cabinet of Amboyna wood is very elegant.
 Two landscapes; that are pretty, and two pieces by *Canaletti*.
 In the rooms of the Attic story are the following pictures, &c.
 In the crimson figured room;
Titian. Holy Family. The colours gone, but the attitude fine.
Vandyke. (copied from him) Charles I. and Queen.
Lely. Joceline Piercy.
 His daughter.
Holbein. A head.
 In the green damask-room;
Griffier. Water-fowl.
 In the Billiard-room. Busts:
Faustina. Fine.
 Galba, in porphery. Excellent.
 Antoninus Pius.
 Commodus.
 Lepidus. His countenance expressive of the mean soul, the dupe of his colleagues.
 Vitellius. Fine.
 The younger Aurelius.
 Tully. Fine.
 Marcellus; antique Parian.
 Silenus.
 Two unknown.
 Here are tables of the yellow antique; and two vast slabs of Egyptian granate. Upon the walls of the room is painted the history of the Trojan war, by *Pelegino*.
 In the yellow bed-chamber;
Griffier. Two pieces of fowls.
 Cupid and Psyche.—The table of verd antique.
 In the second yellow bed-chamber;
Dubame. Still life.
John Vanharp. Rape of Helen. A strange group.
 Three others.
Vanderbec. *Sic transit gloria mundi*.
 Cupid's Decoy.
Vanlynt. Six, by him and *Vanharp*.
Bassan. Dead Christ.
Leonardo da Vinci. St. Catherine; good.
Dubame. *Memento mori*.
 St. Sebastian; fine.
Rembrandt. Abraham and Isaac.
Borgognone. Battle.
Stone. Algernon, tenth earl of Northumberland; copy from *Vandyke*.
Cooper. Oliver Cooper.
 In other parts of the house are:
 In the late lord's dressing-room,
Rosa de Tivoli. Two cattle pieces; very fine.
Reynolds. Portrait of the present Lord. The dog's head very fine.
 In the bed-chamber;
Zuccarelli. Two landscapes, brilliant. The groups and attitudes fine.
Old Frank. Four scripture-pieces. The offering of the wise men; exceeding fine finishing.
 David and Goliath, very fine.
 David viewing Bersheba, exquisite.
Borgognone. Two battles.
Guido. Lucretia, very fine.
Lely. Joceline, last earl of Northumberland. Dog's head, exquisite.
 James II.
 General Monk.
 In the dressing-room;
Canaletti. Eleven views of Venice, &c. very fine, glowing and brilliant.
Mariafchi. Two views ditto.

for sheep, brass and pewter; October the tenth, for hardware, pots and small ware; and October the eleventh, for sheep.

At Kirkham; upon the river Derwent, south-west of Malton, Walter Espec; and Adeline, his wife, in the year 1121, founded a priory of canons of the order of St. Austin, dedicated to the Trinity, and valued, upon the dissolution, two hundred and sixty-nine pounds, five shillings and nine-pence *per annum*.

At Broughton; near Malton, was an hospital, founded in the reign of king Stephen, by the above-mentioned Eustace Fitz John.

At Norton, near Malton, Roger de Flamville; in the beginning of the reign of king Henry II. founded an hospital dedicated to St. Nicholas.

In the neighbourhood of this town is Castle Howard, the seat of the earl of Carlisle, built by Vanbrugh; is much visited by travellers, on account of the great collection of antique busts, statues, and marbles it contains; and also for the beauty of the woods that surround it almost on every side. These are truly magnificent; they are extensive, very well designed, and as they in general hang on the sides of the hills; have a noble effect from whatever point they are viewed. The house loses the grandeur as well as the beauty that ought to attend so large and expensive a building, in the want of a unity of its parts, which have as little beauty in themselves as connection with each other. The front, however, of the new wing, will be light and elegant; an advantage which serves for little else but rendering the rest of the building the more displeasing.

The hall is thirty-three feet square by sixty high, terminating in a dome at top, it is ornamented with pillars of stone; but these are so large, and the height of the room so out of all proportion, that the area has quite a diminutive appearance. The walls are painted by Pellegrino, the history of Phaeton. Here are several antique busts and statues.

Marcus Aurelius.

Bucchus.

Ceres.

Epaphroditus; Nero's secretary.

Hygea.

Adrian. Fine.

Bacchus. The attitude fine.

Paris.

Augustus.

Ceres. Fine.

Lucius Verus.

Vitellius.

Diodumenus, successor of Caracalla. Drapery admirable.

Marc Antony.

Scipio Africanus.

Tyberinus.

Sabina in the character of Plenty. The attitude and drapery fine.

In the saloon, thirty-four by twenty-four, are busts.

Drusus.

Jupiter Serapis. Fine.

Adrian.

M. Aurelius. Fine.

Cupid. Admirably fine; the attitude and expression great; but the modern parts by no means equal to the antique.

Apollo. The head, modern.

Two groupes; lions and buffaloes.

Didius Julian.

The paintings are,

Ricci. Four pieces; the arches good.

Titian. Pope Gregory. Very fine.

Mars and Venus. The design in Venus's figure very fine.

Holy family.

Albert Durer. Vulcan.

Corn. Schout. An Automalia.

Rembrandt. Bohemian shepherds.

A head.

On the left of the saloon, is the following suite.

The dining-room, twenty-eight by twenty-one. Ele-

gantly furnished with pictures, busts, slabs, &c. The chimney-piece is very handsome, the cornice of Siena and white marble; in the middle, grapes of polished white; it is supported by fluted pillars of Siena. The slabs of Sicilian jasper, and an urn of the finest green granate.

Busts, Marcus Aurelius.

A Bacchanal.

The pictures are,

Zuccarelli. Landscape, a waterfall. The trees, figures, and water, excellently done.

Ditto. Cattle on a bridge. The groupe, the water, and the cattle, very fine.

P. Panini. Ruins. Fine.

Tintoretto. Cupid and Psyche. Fine expression.

Spagnolett. The Prodigal Son. Amazing expression.

Paul Veronese. Christ at Emaus.

Upon the chimney-piece, three bronzes,

Brutus.

Cassius.

Laocoon.

The drawing-room, twenty-one square: the slab very antique, and the Roman pavement antique Mosaic: and an urn of Porphyry. The pictures are,

P. Pannini. Two pieces of architecture; very fine.

Canaletti. Nineteen views of Venice, &c. A capital collection, which displays the beautiful glow and brilliancy of this master's colouring in a very high manner.

Ricci. A landscape; fine.

A waterfall.

Baptist. Fruit and flowers; very fine.

Zuccarelli. Two landscapes; very pleasing; the figures, attitudes, &c. fine.

Albert Durer. Adam and Eve.

Abraham and Isaac. Exquisite finishing in that stile of painting.

Correggio. A boy with a dwarf.

St. Catherine and St. Cecilia; unknown.

Upon the chimney, bronzes.

St. Sebastian. Very fine.

Venus.

Apis.

Antinous. Fine.

In the bed-chamber twenty-one square, are slabs of antique Mosaic; bronzes.

Paris.

Laocoon.

Apis.

Medusa; fine; and a Vespasian. A sea-piece and a landscape by *Ricci*.

In the dressing-room.

A very fine slab of antique oriental jasper in a border of flowered alabaster; and another of alabaster of Volterra. Two landscapes by *Ricci*; indifferent.

In the closet.

Two most curious cabinets formed of precious stones; and a slab of antique Mosaic.

Canaletti. Four views of Venice.

Ricci. Two landscapes.

Vandervelt. Sea-piece.

Corn, Johnson. Portrait of lord William Howard. Ditto of his wife. Excellent.

In the antique gallery are,

Many slabs of all the most rare and curious antique marbles. Some inlaid with numerous kinds of marbles and precious stones. Urns, vases, &c. &c.

Busts.

Cato.

M. Junius Brutus.

Caius Cæsar.

Geta.

Virgil.

Homer.

Hercules.

A basso relievo of victory. The attitude and drapery excellent.

Cupid on a goat. A duck, with a bell about its neck.

A satyr holding a goat; fine.

Apollo.
Bacchus.
Mars.
Mercury.

And two busts, one of Tully, the other unknown.

The ceilings are very elegant, bas-reliefs in stucco, and exceedingly well executed. In the center, Flora, incircled with festoons, very delicate and pleasing, small figures in the side and corner divisions; at one end Peace, and at the other Plenty. The chimney-pieces are handsome, their cornices supported by double Ionic pillars; the ornaments inclose two landscapes. The tables are of Sinea marble, and fine.

In the dining-room, thirty-three by twenty-five, are the following pictures:

Hogarth. Garrick in the character of Richard III.

Titian. Venus and Adonis. Most capital. The colours admirably fine, delicate and expressive; the plaits and folds of Venus's naked body, exquisitely done. The whole piece inimitably pleasing. So few of this master's works in his fine brilliant glowing manner, are to be met with in England, that this piece is particularly curious. Most I have seen of them are of weak faded colouring, with none of that happy delicacy and pleasing expression, for which he is so famous; but both are united in this picture.

Madona delle Coniglia. The colouring of this piece also is very fine. The boy is excellently painted; but the draperies are not pleasing.

Julio Romano. Holy family. The colouring of this picture also is very fine. The attitudes of the figures, excellent; and the manner in which they are grouped judicious. The draperies are excellent; but the design of the boy's body appears to me faulty, for the bend in his back is remarkably sharp.

Weston. Three landscapes; good. That with the statue of Hercules, very fine; that in which is a bridge, pleasing. The keeping fine.

The ceiling of this room, like that of the hall, is bas-reliefs in stucco very delicately executed. Jupiter, &c. in the center; and Cupid, &c. in the corners. In the drawing-room, twenty-five by twenty-two, are, Adoration of the shepherds: a noble picture. The attitudes of the Virgin, the principal shepherd and the boy, excellent. The boy is most happily painted; but the lights seem unnaturally diffused they flow from no plain source.

Guido. Daughter of Herodias. Very fine.

Eliza Sirani. Head of Ceres.

A small statue of Antoninus; fine.

In the yellow bed-chamber of the same dimensions, are,

Old Palma. Scourging of Christ. It was painted in competition with *Titian*, and crowned. Prodigious fine expression, and admirable colours; but the diffusion of light unnatural.

Carlo Dolci. Martyrdom of St. Andrew; middling. Not in that artist's glowing and capital manner.

Leonardo da Vinci. Head of St. Paul. Incomparably the finest work of this great painter I have seen. The expression is great; the colours fine, and the minutiae inimitable. The air of the head is great as Raphael; the finishing delicate as Vanderwerf.

Le Brun. Salutation of the Virgin. The attitudes fine, and colouring good.

Dominichino. St. Catherine. Expression incomparably fine; attitude inimitable. A noble picture.

Guido. Bacchus coming to offer marriage to Ariadne. Bacchus is the figure of an Hercules; but Ariadne delicate and elegant. Sweet drapery.

Baroche. Christ supported by an angel. Very fine.

Guido. Christ visiting St. John. The figures and drapery very fine.

Dominichino. Conversion of St. Paul. Legs, arms, and lights!

Claude Lorraine. Morning, a landscape. The light wonderfully fine; the trees nobly done; the keeping and expression exceedingly great.

Ditto. Summer evening. Clear obscure, and brilliant glow, inimitable. The trees finely done.

Albano. Venus and Adonis. The colours are brilliant; but Adonis is a clumsy figure, and Venus disguised by drefs.

Nicolo Poussin. A land storm; gloriously done.

Pietro Cortona. Flora.

Guido. Artemisia.

In the dressing-room,

Carlo Maratt. Assumption of the Virgin: [Fine.

Borgognone. Battle-piece; clear and fine.

Giuseppe Chiari. Christ carrying the cross.

Seb. Bourdon. Repose in Egypt.

Guido. St. Peter penitent. Expression, colours, and finishing, astonishingly fine.

Coreggio. Virgin and Child. The attitude and pleasing expression, fine; but the colouring dead.

Parmegiano. Female faint, prodigiously fine.

Aug. Carrache. Pan overcome by Cupid.

Rubens. Nymphs in this master's stile; not tempting ones.

Correggio. Virgin and Child, a sketch for his famous *Notte*. The attitude elegant, and the colours fine.

Paffara. Clorinda wounded by Tancred; from Taffo: Great expression, but the teints as rough as Bassan's.

Bartolomeo. Io changed into a heifer; the figures by *Polemburg*.

Rubens. Day of judgment. An odious subject for painting; but highly finished in varnish. The better such works are done, the more they disgust.

Salvator Rosa. Two landscapes: Not in his usual manner.

Carlo Cignani. Madona and Child; fine:

On the other side; an anti-room, twenty-four by twenty: blue damask bed-chamber, twenty-five by twenty.

In the closet,

Rembrandt. A Dutch merchant; fine.

Bassan. Mechanicks.

Upon the whole, this collection, though not very numerous, is extremely capital; the indifferent pictures are few, the fine ones admirable; some of them sufficiently great to awaken in the beholder the most rapturous delight: *Titian*, *Leonardo da Vinci*, *Old Palma*, *Guido*, *Julio Romano*, *Dominichino*, *Parmegiano*, *Poussin*, and *Claud Lorraine*, may be studied in the small collection of their works exhibited here, much better than in many more numerous ones:

Mr. Duncomb's ornamented grounds are, in their stile, as curious as his paintings; and cannot be viewed without yielding a most exquisite enjoyment:

The garden adjoining the house backs a terrace, from which the landscapes are much easier imagined from a few touches, than described in many words: At one end of it, is an Ionic temple, commanding a noble variety of prospect and landscape: the former is seen to the left picturesquely, broken by large trees near the temple itself: a little to the right of that a vast extent of country; then you look down upon a valley, winding at the bottom of a noble amphitheatre of hanging woods, over one of them, and at the other end of the terrace, a Tuscan collonnade temple: The opposite woods which spread over a fine extent of hill, fringe the very shore of a beautiful river, which winds through the valley, and forms, almost in the center of it, a considerable cascade: Nothing can be more truly beautiful than the bird's eye assemblage of objects, which are seen from hence. The valley is intersected by hedges, which form beautiful inclosures of grass; the meanders of the river are bold and well broken by scattered trees; the cascade almost over-hung with the pendant wood which spreads so nobly to the view; the Tuscan temple crowning a bank of wood, form together a distinct landscape, in which every object is such as the warmest fancy would wish for, or the correctest taste approve:

This view is beheld with a moving variation as you walk along the terrace, towards the Tuscan temple, with fresh objects breaking upon the eye as you advance: that building being situated at the point of what one

may call a promontory of high land, projecting into a winding valley, and planted, the views from it are doubled; another terrace then appearing, the temple commands such various scenes of the sublime and beautiful as to form a theatre worthy the magnificent pencil of nature.

To the left you look upon the valley already described, with infinite advantage; for the hanging woods on the opposite side are seen in a much greater bending extent than from the former point of view, and have an effect really glorious. The valley, the river, and the cascade, are seen beneath you at a depth that presents a full view of every inclosure; the bank of wood against the garden makes a curve, which has a very fine appearance, bounded at the top by the Ionic temple; in front, between the hills, an extensive woody valley opens beautifully variegated. An old tower, Helmsley church, and the town scattered with clumps of trees, are seen in the midst of it at those points of taste which make one almost think them the effects of design. Turning from this noble picture to the right, a fresh one is beheld, differing somewhat from the former, but yet in unison with it in the emotions which it raises. The valley continues to wind within a noble hollow of surrounding hills, that throw an awful sublimity over the whole scene; they are covered with hanging woods, the brownness of which sets off the beauty of the river in a striking manner. It is here seen in a greater breadth, and as you look upon the line of its course, the sun-beams playing on its current throw a lustre on this sequestered scene surprizingly elegant. A cascade in view adds the beauties of motion and sound to those numerous ones already mentioned.

The views therefore from this temple consist principally of two valleys, one to the right, the other to the left; neither of them are to be seen from the other, but both commanded by the point of the projecting hill, upon which the temple is situated. The opposite woods which form of each vale so beautiful an amphitheatre, are divided in front of this temple by a noble swelling hill, scattered over with fern and other rubbish; the effect is good; the object magnificent in itself, different from all the surrounding ones, and presents to the eye a contrast of a striking nature.

This temple is a circular room finishing in a dome, the ornaments white and gold in Mosaics; and four statues as large as life in niches.

But those ornamented grounds are not the only ones boasted of by Duncombe-Park; at the distance of about two miles, is another called Rivers' Abbey, from the ruins of an antient one. It is a most bewitching spot, worthy the pencil of the greatest landscape painters; far short of the original, therefore, must any attempts to describe it prove.

This ground consists of a noble winding terrace, upon the edge of an extended hill; along one side at a striking depth is a valley; on the other a thick plantation, bordered by shrubs. At one end is a circular temple with a Tuscan colonnade; at the other end another temple, with an Ionic portico. This is the outline; the following particulars must serve instead of colouring. From the Tuscan temple, the end view is exceeding fine; at your feet winds an irriguous valley, almost lost in scattered trees. In front, vast hanging woods are spread over the opposite hills, and form a noble variety of steeps, dells, and hollows. Here and there the range of wood is broke in a most beautiful manner, by cultivated inclosures; at the bottom of these hanging forests, upon the edge of the valley, an humble cottage is seen in a situation elegant in itself, and truly picturesque in the whole view. The distant hills which are seen above, are waste grounds, with fern, whins, &c. which seem to bound the little paradise in view, and add, to the enjoyment of beholding it, that which results from contrast and unexpected pleasure.

Inclining a little to the right, you look down upon a prodigious fine winding valley; on one side project boldly noble hanging woods, which fringe a continued hill from its very summit, to the bottom. Nothing can

be more elegant than this valley, which consists of a vast number of beautiful grass inclosures, intersected with thorn hedges; the scattered trees that rise in them give different shades of green, and the light being seen through their branches, has the real effect of a brilliant clear obscure, so difficult to be imitated in painting. This beautiful valley is lost among projecting hills, some covered with pendent woods, others waste, and some cultivated.

More to the right towards the terrace, the view is exquisite. The waving plantation of trees and shrubs bound the terrace on one side; leading to the Ionic temple, which is beautifully situated, on the other side, the valley winds in a lower region, and presents a scene elegantly romantic. It consists of grass inclosures, finely scattered with trees; a village of straggling houses, keeping their heads above natural clumps, each a landscape of itself. This sweet valley is bounded by a noble sweep of hills.

Following the terrace, the views vary in a most picturesque manner. Nothing can be finer than the valley waving to the right and left, a river winding through it, almost overshadowed with pendent trees, which rise from the very shore into hanging woods, that spread forth a fine extent of hills, beautifully cut with grass inclosures. A most bewitching view.

Pursuing the course, the landscape opens and presents its beauties full to the eye. The valley is here broad, the inclosures numerous, the verdure of the meadows beautiful, the scattered trees truly elegant; and the rapid stream highly picturesque. The hanging woods have a noble appearance; and in front the termination of an extensive down so different from the other objects, has a noble effect. A neat farm-house under a clump of trees adds to the beauty of this part of the scene.

Advancing farther on the terrace, a scene more exquisite than any of the preceding, is next viewed. You look through a waving break in the shrubby wood, which grows upon the edge of a precipice, down immediately upon a large ruined abbey, in the midst, to appearance, of a small, but beautiful valley; scattered trees appearing among the ruins in a stile too elegantly picturesque to admit description. It is a bird's-eye landscape; a casual glance at a little paradise, which seems as it were in another region.

From hence, moving forwards round a curve of the terrace, the objects are seen in new directions; a variety, not a little pleasing. The ruins of the abbey appear scattered, and almost in full view; the valley in front is broad and highly beautiful. Behind, it is half lost among the projecting hills, but a new branch of it appears like a creek running up among hills, nobly spread with wood. The hanging woods in front are seen to great advantage; and the abbey with some scattered houses are most picturesquely situated. The inclosures, of which the valley is formed, appear at this point of view extremely beautiful; the scattered trees, hay stacks, houses and hedges, all together form a most pleasing landscape. Two distant hills give a proper termination to the whole view.

Further on from this spot, you look down a steep precipice almost on the tops of the abbey's ruins; the situation quite picturesque. Beyond it, the valley appears with some variations in its usual beauty; and turning your head to the scenes your have left, a bridge of three arches thrown over the river, catches your sight in a spot which adds greatly to the beauties of the view. The opposite banks are finely spread with hanging woods, and above them the uncultivated hills appear boldly in irregular projections.

Before you arrive at the portico, the scene is much varied; hitherto an edging of shrub wood along the brink of the precipice hides its immediate steepness from your eye, but here it is broke away, and you look down on the abbey in a bolder manner than before; the trees are picturesquely scattered, and all the other objects seen in great beauty.

The view from the Ionic temple is a noble one, equal to any of the foregoing, and different from all.

A strong

A strong wave in the line of the terrace presents a view of its own woody, steep bank, rising in a beautiful manner to the Tuscan temple, which crowns its top. The abbey is seen in a new, but full view; the bridge finely encompassed with hanging trees. The range of pendant woods that fringe the opposite hills appear almost in full front, and the valley at your feet presents her profusion of beauties. It is a noble scene.

The Ionic portico'd temple, is a very beautiful room of a most pleasing proportion, twenty-seven by eighteen, and elegantly ornamented. The ceiling is coved, an oblong in the center containing a copy of Guido's Aurora, done in a very agreeable manner, the graceful attitudes of the hours finely preserved, and the glowing brilliancy of the colouring pleasingly imitated. The cove part of the ceiling is painted in compartments. On the four sides, Andromeda chained to a rock: Diana.

A sea Venus: attitude good.

Hercules and Omphale. Her attitude pleasing, and her whole figure beautiful, though not correct; the roundness of the breasts and limbs; and the plaits and folds of her flesh well done. The expression of the Cupids well imagined.

At the corners of the cove, Cupids; and in smaller compartments, other subjects. The whole performance of Burnice, who came from Italy to execute it.

The cornice and frieze, and the chimney-piece, which is of white marble, are very elegant. The former with the pannels of window-cases, &c. and room, ornamented with gilt carving on a brown ground. Upon the whole, this elegant little room in respect of proportion and ornament, is the most pleasing one ever seen in any temple.

At Hovingham, about four miles from Newton, Mr. Wrottesly has a new-built house, which is viewed by strangers for more reasons than one. The approach is through a very large stone gate-way, upon which is the following inscription:

Virtus in actione consistit.

and as the building looks pretty much like the gable-end of a large house, it is frequently mistaken at first (with that inscription) for an hospital. The entrance is directly out of the street for coaches, through a narrow passage into a large riding house, then through the anti-space of two stables, and so up to the house door.

In the hall, is an antique basso relievo of a bacchanalian group.

Two bronzes—Hercules squeezing Anteus; and a Hercules and a stag.

Likewise a very good portrait of bishop Williams. The chimney-piece is of white and Siena marble; with Doric pillars, an instance of the bad effect of pillars without bases even of that order. The pannels of the room are painted in fresco.

Sacrifice to Diana.

Ditto to Apollo.

Time cutting Cupid's wings.

In the Doric room, the chimney-piece is of Sicilian jasper; here are,

Lot and his daughters; in a dark stile, but good expression.

Bacchus offering marriage to Ariadne.

A large landscape. Good.

Two ditto, companions.

Over the chimney, another. The cattle, figures, light, and trees well done.

In the library, are several busts, and small statues; a Venus of Medicis in bronze, and over the chimney a landscape; the colouring of which is unnatural, but it has an agreeable glow, and the light is good.

In the drawing-room, the collection of drawings are very fine; among others, are the following:

Venus and Cupids.

Hercules, &c. Very fine:

A triumphal entry. Ditto.

A naked figure, with a cupid dressing her leg, and a man drawing some drapery before her. Admirably done.

Perseus and Andromeda. Excellent.

Danae and the golden shower. Fine.

Mars and Venus.

An old woman sitting in a chair. Very fine.

Women and boys. Exquisite expression.

Charity and her children. Very fine:

Among the pictures are,

Leda. Good; but the colours gone.

Venus and Adonis. Ditto.

Elizabeth; a Rubens' figure.

In the great room, thirty-five feet square, by twenty-five high, are the following, among other pictures:

Sufannah and the Elders. Fine; but no expression in her countenance.

Lot and his Daughters. In a very dark stile.

Fortune.

Prudence, its companion. Good.

Landscape; the flight into Egypt. Good.

Ditto; light behind a rock.

Rocks in Switzerland.

Large landscape; duck shooting.

King Charles on horse-back; the same as those said to be by Vandyke; and the horse by Whooten.

From hence we passed on to Thrusk, or Thrisk, one hundred and ninety-nine miles from London. It is an ancient borough by prescription, governed by a bailiff, and about fifty burgage-holders. The bailiff is chosen by the burgage-holders, and sworn by the steward of the lord of the manor, for whom he holds court at Lady-Day, and Michaelmas. The representatives in parliament for this borough, are chosen by the burgage-holders, and returned by the bailiff. Here was anciently a very strong castle, which was demolished by king Henry II.

This town sends two members to parliament; has a weekly market on Monday, and five annual fairs, viz. Shrove Monday, April the fourth; and August the third, both three-day fairs, for horses; October the twenty-eighth, a two day fair; and December the fourteenth, for horses, black cattle; sheep and leather.

At St. John's Mount, north-east of Thrisk, William Percy the first, called Algernoon, in the time of king Henry I. founded a preceptory of Knight's Hospitallers, of St. John of Jerusalem, dedicated to the Virgin Mary, and endowed, upon the suppression, with one hundred and thirty-seven pounds, two shillings and one penny *per annum*.

Peter de Holton, about the year 1150, founded a nunnery of the Benedictine order, at Arden, near Thrisk. It was dedicated to St. Andrew, and at the time of the general suppression contained nine religious, whose revenues amounted to no more than twelve pounds and six-pence *per annum*.

Helewisia, daughter of Ranulph de Glanville, lord chief justice of England, in the time of Henry II. founded a monastery for canons of the Premonstratensian order, at Swainby, near Thrisk, who in the fourteenth year of the reign of king John, were removed to Coveham, near Midlam, by Ralph, lord of Medlam, the son of the foundress. This abbey was dedicated to the Virgin Mary, and endowed on the suppression, with yearly revenues, amounting to one hundred and sixty pounds, eighteen shillings and three-pence *per annum*.

Before the year 1200, there was an hospital for sick and poor persons, at Bagby, on the south-east side of Thrisk.

From Thrisk we continued our journey to Bedall, a town of small note two hundred and fifty-two miles from London. Here is a charity-school, and a living worth five hundred pounds *per annum*. It is reckoned, that in the neighbourhood of this town are bred the best hunting and road horses in the world.

Here is a weekly market on Tuesday, and six annual fairs, viz. Easter-Tuesday, Whit-Tuesday, and July the fifth; a two-day fair for horned cattle, horses, sheep, leather, pewter, brass, tin, and millinary; October the tenth, a two-day fair, for black cattle, sheep, hogs and leather; and Tuesday se'nnight before Christ-mas, for horned cattle and sheep.

We next came to Masham, two hundred and seven miles

miles from London; remarkable only for a cloth manufactory; with a corn mill upon the river Ure.

The weekly market of this town is on Saturday, and the annual fair, which lasts two days, September the seventeenth and eighteenth, for horned cattle, sheep and pedlary.

Sir Ralph de Neville, Lord of Midlam, in the year 1342, founded an hospital at Well, north-east of Masham, for a master, two priests, and twenty-four brothers and sisters, dedicated to St. Michael the Archangel, and endowed on the dissolution with forty-two pounds, twelve shillings and three-pence *per annum*.

In the neighbourhood of Masham lies Swinton, the seat of Mr. Danby, who has rendered it one of the pleasanter places in this country; he has surrounded the house with a most beautiful park, finely wooded and watered, and has added plantations and pleasure-grounds in a style of great propriety and taste. With much trouble and expence he brought, several miles, a small but elegant stream through his gardens and park, which, in some places, breaks into very fine lakes; in others contracts into the size of a little rill, which winds through the woods in a most pleasing manner: here falling in cascades, it enlivens the whole scene, there withdraws from the eye, and hides itself in the dark bosom of tufted groves.

The house is very convenient, and elegantly furnished. Among other articles, the following pictures merit the most attention.

Claud Lorraine. Landscape; a quay. Very fine. The relief, perspective and general brilliancy, bold and spirited; the light behind the tower, and upon the water, beautiful.

Poussin. Landscape. The general harmony of this piece is good. The trees beautiful, and the colours spirited.

Unknown. Landscape. A thick tuft of trees, with figures and cattle. The brilliancy, and glowing expression of the light behind the foliage, very pleasing.

Ditto. Landscape, its companion; boys on an ass, led by another. The expression of the boys fine. The little one behind draws up himself in a natural manner. The ass good.

Ditto. A group of figures, part of them around a table. The attitudes very easy and natural, particularly those of the two figures in the fore-ground: the draperies well done.

Ditto. A sea-port. The light strong and well reflected.

Unknown. Small landscape; rocks, trees, and a bridge at a distance. On the right, the trees are in good taste, but the other objects want distinctness.

Ditto. The five senses, a group; with emblematical ornaments. Good, but the figures have vulgar countenances: the colouring and the other expression well done; indeed the ornamental part is better than the principal. The lap-dog is very much like a lion, and the beauties displayed by the lady in blue not of the most Titian elegance. The architecture is well executed, and the minute finishing of the whole fine.

School of Raphael. The delivery of the keys. Airs of the head good, but the drapery and general effect not pleasing.

Flemish. A boor with a trumpet in his hand. The attitude and expression very natural.

Unknown. Small landscape, a group of horsemen, with cattle driving through water. The general effect pleasing; the horses are the most finished part of the piece; the white one in particular is very fine, and in clear and full relief.

Unknown. A flower-piece. Good.

Holbein. A head. Very fine.

Rembrandt. A Jewish rabbi, a copy from the famous picture of this master. It is an excellent one. The face most expressively done; the hands good; the turban excellent; the rest of the drapery and general effect fine and brilliant.

Rubens. An archduke of Austria. Capital. Exceedingly fine, and spirited expression.

Ditto. His archduchess. Ditto, but inferior to the other.

Lely. Three family portraits. Very pleasing.

Unknown. Dead game. Very natural.

Having viewed this elegant seat, we proceeded on our tour and arrived next at Midlam, situated on the river Ure, two hundred and fifty-two miles from London. It had formerly a very strong castle, in which Edward, prince of Wales, only son of Richard III. was born. Here is a woollen manufactory; a weekly market on Monday; and an annual fair November the sixth, for sheep; which lasts two days. In the neighbourhood of this town are frequent horse-races.

In the time of Richard I. Robert, son of Nicholas de Stutevil, founded a nunnery of Benedictines, or Cistercians, at Rosedale, not far from Midlam. It was dedicated to St. Mary, and St. Laurence, and endowed at the suppression with thirty-seven pounds, twelve shillings and five-pence *per annum*.

In the church at Wenslay, near Midlam; there are some remains of a college, dedicated to the Trinity.

We next arrived at Askrig, a small obscure town, one hundred and seventy-five miles from London, of no note but for a weekly market on Tuesday, and three annual fairs, viz. May the eleventh, and the first Thursday in June, for woollen cloth, pewter, brass and millinary goods; and October the twenty-eighth, a two-day fair, for horned cattle, woollen cloth, pewter, and millinary.

At Baint-brig, near Askrig, are still to be seen the ground works of a Roman fortification, containing about five acres of ground, together with the tracts of houses; and a stone was dug up here, with the following fragment of an inscription, supported by the figure of a winged victory, IMP. CÆS. L. SEPTIMO PIO PERTINACI AVG. — — — — — IMP. CÆSARI M. AVRELIO A — PIO FELICI AVGVSTO — — — — — BRACCHIO CAEMENTICIVM — VI NERVIVM SVB CVRA LA SENECON AMPLISSIMI OPERI L. VI. SPIVS PRÆ — — — — — LEGIO — — — — — whence it is conjectured, that this fort was called Bracchium, and that the sixth cohort of the Nervii was in garrison here.

Here has also been dug up a statue of the emperor Aulus Commodus, in the habit of Hercules, his right hand armed with a club; and on the pedestal is the following imperfect inscription. CÆSARI AVGVSTO MARCI AVRELI FILIO — — — — — SEN IONIS AMPLISSIMI VENTS — — — — — PIVS.

At Rere-cross, north of Askrig, upon Stanemore, and the borders of Westmoreland, was an ancient hospital given to the nunnery of Meraick, before the year 1171, by Ralph, the son of Ralph de Multon, or by Conan, earl of Richmond.

Leaving Askrig, we pursued our journey to Richmond, so called by a small variation of Rich-mount, a name derived from the situation of this town upon a beautiful and fertile mount, or hill, on the north bank of the river Swale, two hundred and sixty-two miles from London. It was built by Allan, one of William the Conqueror's generals, and first earl of Richmond; and is a borough, governed by a mayor, a recorder, twelve aldermen, twenty-four common-council men, and other officers who keep courts for all sorts of actions. Here are thirteen free companies of tradesmen, who chuse the mayor; and this borough has been annexed to the duchy of Lancaster, ever since the reign of Richard II.

Richmond is inclosed with walls, in which are three gates, leading to three suburbs. It formerly had a castle, built by earl Allan, part of which is still standing. It is a large, well built, populous town; the streets are neat and well paved, and many of the houses are built of free stone. Here are two churches, and a good stone bridge over the river Swale.

The chief manufactures of this town are woollen knit caps for seamen, and yarn stockings, for servants, and ordinary people.

The views about Richmond are remarkably fine, the situation being very romantic and pleasing. Just before you enter it, down in the valley to the left, the river winds in a most beautiful manner below the hills, and forms a cascade, which enlivens the scene, and has a very fine effect. Mr. York's gardens in the town are very well worth seeing, as the beauty of the situation is not only naturally great, but much improved by art. Upon a rising ground near the house, is erected a tower, a good object in itself, and commands a good view. To the right is seen a very fine sheet of the river, under a noble hanging wood, which, bearing round towards the left, forms a fine amphitheatre, terminated to the left by the town, and the old castle on a rising part of it. Beyond it, a distant prospect. The whole very fine.

From this building, a terrace skirts a pasture, and from it the scene varies in a very agreeable manner. You look upon a very pleasing valley, through which the river winds, steep rocky woods on one side, and waving slopes on the other. Soon after you command, through the vale, a large distant hill, the banks covered with hanging wood, and the top cut into corn and grass inclosures. Following the terrace you come to an alcove seat, from whence the view is extremely pleasing. To the right, the river comes from a tuft of hill and wood in a most picturesque manner, and giving a fine curve, bends round a grass inclosure, with a cottage, hay stacks, &c. and then winds along before you under the noble bank of hanging wood, which you look down on from the tower. The hills bound the valley most beautifully, and confine the view to a small but pleasing extent. That scared with rock is a fine object; and the grass inclosures above its steep of wood have a most elegant effect. To the left some scattered houses, and the churches, give a termination on that side which varies the prospect.

Winding down the slope towards the river, the views continue very pleasing; as you advance a little temple (Mr. Ritchie's) at a distance in the vale, romantically situated among hanging woods, adds much to the scene. The walk borders the river through a meadow, and leads to the mouth of a cavern, hollowed out of the rock in a proper stile, which brings you to the point of view, on the side of the hill, from which you look down on the river, and opposite on the bank of hanging wood.

Other walks from hence lead to the banquetting-room, which is well situated for commanding a pleasing view of various objects. In front, and to the right, you look into a most noble amphitheatre of hanging wood, and the river winding at its feet. To the left the town spreads over a hill, in one part the castle appears, and below the bridge over the Swale. The whole is picturesque and pleasing. The bridge and castle are also seen to great advantage from the corner of the terrace on the banks of the river.

About the year 1100, Wymar, steward to the earl of Richmond, gave a chapel in this town, dedicated to St. Martin, with some lands in the neighbourhood, to the abbey of St. Mary, at York; upon which, nine or ten Benedictine monks were fixed in this chapel, where they continued subordinate to the monastery of St. Mary, until the general dissolution, when they were found to be possessed of revenues valued at forty-seven pounds, and sixteen shillings, *per annum*.

In the year 1151, Roald, constable of Richmond, founded here a Premonstratensian abbey, dedicated to St. Agatha, in which, at the time of the general suppression, were about seventeen canons, endowed with yearly revenues rated at one hundred and eleven pounds, seventeen shillings, and eleven-pence.

In the time of king Henry II. here was a nunnery, of which no particulars are known. Here was also at the same time an hospital, founded by king Henry II. and dedicated to St. Nicholas, which continued to the general suppression, when it had revenues rated at thirteen pounds, twelve shillings, *per annum*.

Ralph Fitz-Randal, lord of Middleham, in the year 1258, founded here a house of Grey-friars. And some

are of opinion, that here was a house of White-friars; but this opinion is not well supported.

In the time of king Henry III. here was founded a cell of Alien monks, subordinate to the abbey of Begare, in Brittany.

Richmond sends two members to parliament; has a weekly market on Saturday, and three annual fairs, viz. Saturday before Palm-Sunday, first Saturday in July, and Holy Rood, September the fourteenth, for horses, sheep and black cattle.

On the tops of some of the vast mountains near Richmond, are found great quantities of stones like cockle-shells, some of which are buried in the middle of firm rocks, and others in beds of lime-stone, at six or eight fathoms under ground. Some call them urn lime-stones, and suppose them to be produced by a more than ordinary heat, and a quicker fermentation, than they allow to the formation of the other parts of the quarry.

Cattarick, a village upon the bank of the river Swale, near Richmond, was the Caturactonium and Catarracton of Ptolemy and Antoninus. The present name is a small variation of the ancient names Caturactonium and Catarracton, which seem to have been derived from the cataract formed by the river Swale near this place. In the time of the Romans this was a great city, through which Ptolemy, in an astronomical work called *Magna Constructio*, describes the twenty-fourth parallel of north latitude, and makes it distant from the æquator fifty-seven degrees. Cattarick stands upon a Roman highway, that crosses the river at this place, and by the ruins still visible in and around it, appears to have been a city of a large extent, and strongly fortified. On the east side, near the river, is a huge mount, secured by four smaller works; and upon the bank of the river the foundations of very strong walls are still discernable. In the reign of king Charles I. a large pot, consisting of an uncommon mixture of metals, and capable of containing twenty-four gallons, was found here, almost full of Roman coins, the far greatest part of which was copper; and in 1703 a vault was discovered near this place, containing a large urn and two smaller ones.

Upon a hill in the neighbourhood of this town, adjoining to a farm-house called Thornburgh, have been found many Roman coins; one in particular, of gold, had this inscription, *Nero Imp. Cæsar.* and on the reverse, *Jupiter Custos.* Here have also been dug up bases of old pillars, and a brick floor, with a leaden pipe passing perpendicularly down into the earth. It is thought that this was a place for performing sacrifices to the infernal gods, that the blood of the victims descended by this pipe, and that Thornburgh was the *Vicus juxta Cataractam*, mentioned by Antoninus.

In and about Cattarick have been found several stones with Roman inscriptions, among which was an altar inscribed as follows, DEO QVI VIAS ET SEMI-AS COMMENTVS EST T. IRDAS S. C. F. V. L. L. M. Q. VARIVS VITALIS ETE COS ARAM SACRAM RESTITVIT APRONIANO ET BRADVA COS.

From Cattarick the Roman highway runs through Aldborough to Powes, north-west of Richmond. In the Itinerary of Antoninus, Bowes is called *Lavatræ* and *Levatræ*, which name is supposed to be derived from a small river near it, called the Laver. Here the first cohort of the Thracians was garrisoned, in the reign of the emperor Severus, when Virius Lupus was lieutenant and prætor of Britain, as appears by the following inscription upon a stone dug up at this place. DAE — — FORTVNÆ VIRIVS LVPVS LEG. AVG. PR. PR. BALINEVM VI IGNIS E XV. STVM. COH. I. THRACVM RESTITVIT CVRANTE VAL. FRONTONE PRÆF—EQ. ALÆ VETTO.

Here is a church, in which is a stone used formerly for a communion-table, with the following inscription in honour of Hadrian the emperor. IMP. CÆSARI DIVI TRAIANI PARTHICI MAX. FILIO DIVI NERVÆ NEPOTI TRAIANO HADRIANO AVG. PONT. MAXM: — — COS: I. — — P. P. COH: IIII: F. — — IO. SEV.

Many more stones have been dug up here with Roman inscriptions; and at Greta-bridge, not far from Bowes, has been a Roman camp, in which several Roman coins have been found, and a stone altar, with the following inscription. DEÆ NVMERIÆ NVMINI BRIG. ET IAN.

At Rookby, near Greta-bridge, in 1702, a stone altar was dug up, inscribed thus, DEÆ NIMPHAINÆ INBRICA ET IANVARIA XET IBINVS — — MV IOSONIRVN.

Upon the same military way, north-west of Bowes, are the remains of a small square Roman fort, now called Maiden-castle. Temple Brough, upon the bank of the river Don, near Rotherham, is another Roman fort; and the remains of a third fort are still visible not far from Sheffield;

Over against Temple Prough, on the opposite side of the river, is a high hill, called Winco Bank, from which a large bank is thrown up, and continued almost five miles without interruption; one part of which is called Danes-Bank, another Devil's-Bank, a third Kemp's-Bank, and a fourth part Temple-Bank.

At Gillling, near Richmond, queen Eanflæda, before the year 659, built a monastery; which was afterwards destroyed by the Danes.

In the year 685, St. Cuthbert, founded a monastery at Croke, not far from Richmond, which was in being two-hundred years afterwards.

Akarius, the son of Bardolph, in the year 1145, founded a priory at a place formerly called Fors, not far from Richmond, subordinate to the monastery of Biland; but the abbot and Cistercian monks at Fors labouring under several inconveniencies, on account of their situation, were removed, in the year 1156, to Jervaux, north-west of Masham; where, upon a pleasant valley assigned them by Conan, duke of Brittany, and earl of Richmond, they built a church and offices, and flourished till the general suppression, when their yearly revenues were rated at two hundred and thirty-four pounds, eighteen shillings and five pence *per annum*.

At Marrick, south-west of Richmond, Roger de Afc, about the beginning of the reign of Henry II. founded a Benedictine nunnery, dedicated to the Virgin Mary, and endowed with revenues, rated upon the suppression at forty-eight pounds, eighteen shillings and three-pence, *per annum*.

In the beginning of the reign of Henry II. Bertram de Balmer founded a monastery of men and women, at Marton, near Richmond; and dedicated it to the Virgin Mary; but the nuns were soon afterwards removed to Melfonby, north-east of Richmond. The religious men, who were canons of the order of St. Austin, continued here till the general suppression, when their yearly revenues were rated at one hundred and fifty-four pounds, five shillings and four-pence.

King Henry II. before the year 1167, founded a Benedictine nunnery at Melfonby, dedicated to St. John the Apostle and Evangelist. About the time of the dissolution it had a prioress, and nine religious, with yearly revenues, valued at no more than twenty-six pounds, two shillings and ten-pence.

South-east of Richmond, at a place called Ellerton, Warnerius, dapifer to the earl of Richmond, in the time of king Henry II. founded a small priory of Cistercian nuns, whose revenues, upon the suppression, were valued at fifteen pounds, fourteen shillings and eight-pence, *per annum*.

At Eggleton, north-west of Richmond, was an abbey of Premonstratensian canons, supposed to have been founded by Ralph de Multon, about the beginning of the reign of king Richard I. It was dedicated to St. Mary and St. John the Baptist, and had yearly revenues valued upon the suppression at sixty-five pounds, five shillings and six-pence.

About the fifth year of the reign of king John, Allan de Wilton, founded a small priory of Gilbertine canons, at Ovinton, north of Richmond, which was valued upon the dissolution at eleven pounds, two shillings and eight-pence *per annum*.

This part of Yorkshire, known by the name of Richmondshire, is one of the most remarkable parts of the kingdom, and could not fail to induce us to visit so romantic a spot. Our first excursion was towards Greta-bridge, and in our way we visited Rookby, the seat of Sir Thomas Robinson. The collection in the house is curious, and the pleasure ground romantic.

In a back arcade, on entering the former, are the following busts, &c.

Apollo.

Diogenes. Fine.

Two Roman Emperors, and their wives.

In the arcade.

Homer. Very fine.

Virgil.

Demosthenes.

Petrarch and Laura, a bas-relief.

Mercury and Jupiter.

Three boys blowing bubbles.

Destruction of Niobe's children. Fine.

Virgin and Child.

Cupid.

Group of boys.

Five Virgins, a group. Attitudes and drapery very fine. One would imagine Guido had taken from this relief the idea of his hours:

Claudite ostia virgines lusimus fatis,

Catull. Eleg. 59.

Origine in hortis Burghefii

A small statue of Hercules, with the Nemean skin.

In the yellow bed-chamber.

Venus and Adonis, in the stile of Rubens.

Jupiter and Danae. Very fine and expressive.

Portraits. Sir Isaac Newton.

Peter the Great.

Charles the Twelfth.

Cardinal Woolsey. Very fine.

Duke of Loraine.

Prince Eugene.

Duke Schomberg.

King of Sardinia. None of these pieces are bad.

Library.

Jupiter and Io. Disagreeable.

Apollo, rewarding Merit, and punishing Arrogance. Good.

Europa. Attitude and drapery good. Colours gone.

Diana and Acteon. Middling, but ditto. The expression of Acteon paltry.

Ruins of Rome.

Hercules. Fine.

Mercury. Heavy.

Apollo.

Ceres.

And two unknown.

Busts. Adrian.

Paulina. Very fine.

Julia. Fine.

Others unknown.

In the chimney-piece, a piece of antique Mosaic.

Crimson drawing-room.

Choice of Hercules. Expression and colours bad.

Two heads in crayons. Admirably fine.

Bas-relief of Diana. Attitude and drapery very fine.

Two Tuscan vases.

Two antique bronzes; Cerberus and another. In the center a model of the horse at Charing-Cross.

In a wing of the house is an apartment called the Museum; where is treasured much learned lumber; among other food for an antiquarian, are

King Athelstan's tomb.

Ceres.

Priam.

Isis.

Bas-reliefs.

Statues.

Busts, &c. &c.

The pleasure ground is romantic, and were it kept

something of order, would be much admired. The tea-room is very romantically situated on the rocky banks of the Greta, raging like a torrent over the rocks, and tumbling in a romantic manner under the windows. A little below it joins the Tees, under noble rocks of free stone overhung with wood. Above the room, the other way, are some very romantic rocks on the side of a terrace by the water.

After leaving Greta-Bridge, the prospects from the hills are very pleasing for a few miles, over beautiful variegated inclosures bounded by hills; and pursuing this most delightful line of country, we next came to Egglestone, romantically situated among rocks, steep of wood, raging torrents, beautiful cascades, a fine assemblage of the noble touches of nature. Mr. Hutcheson's house is sweetly situated in the midst of these rural wonders.

Advancing towards Middleton, from the hill before you descend to the village, the most glorious prospect opens to the view that imagination can picture; you look down upon the left over a noble extensive valley intersected with hedges and a few walls into sweet inclosures, which being quite below the point of view are seen distinct, though almost numberless; the scattered trees, the houses, villages, &c. &c. ornament the scene, in a manner too elegant to admit of description. Beneath your feet at the bottom of a vast precipice, rolls the Tees, which breaks into noble sheets of water, and throws a magnificence over the scene, that is greatly striking; another river winding through the vale, falls into the master of its waters and its name. Together, they exhibit no less than twenty-two sheets of water scattered over the plain in the most exquisite manner; the trembling reflection of the sun-beams from so many spots in such a range of beauty, has an effect astonishingly fine. Elegant beyond all imagination.

After you leave Middleton, the eye of the traveller is again feasted with the most luxuriant beauties that inanimate nature can exhibit. The vales to the left are exquisitely pleasing. In some places the road hangs over the Tees on the brink of wild precipices; in others the river winds from it. The plain is about a mile and an half broad, and surrounded with mountains, so that the picture is every where complete and bounded. The serpentine course of the Tees is amazingly fine; it bends into noble sheets of water quite across the valley; and seems to call for the proud burthen of swelling sails, to finish so complete a scene.

Nothing can be more pleasing than the numerous inclosures on the banks of the river, clothed with the freshest verdure, and cut by hedges full of clumps of wood, and scattered with straggling trees. The villages enliven every part of the scene. From the hills around this paradise, the sport of nature in her gayest mood, innumerable cascades pour down the rocky clefts, and render every spot elegantly romantic.

Pursuing your track through this delicious region, you cross some wild moors, which contrast the pictures you have beheld, and render those that follow more peculiarly beautiful. After passing Newbigil, you come to a spot called Dirt Pit, one of the most exquisite bird's-eye landscapes in the world. It is a small, deep, sequestered vale, containing a few inclosures of a charming verdure, finely contrasted by the blackness of the surrounding mountains. Upon the whole, it is one of those scenes one would imagine rather the sport of fancy than the work of nature.

Leaving this enchanting region, we crossed a very different country, partaking much more of the terrible sublime, than the pleasing and beautiful. Here you ride through rapid streams, struggle along the sides of rocks, cross bleak mountains, and ride up the channel of torrents as the only sure road over bogs; listening to the roar of the water-fall, which you begin to think tremendous. Upon arriving at the banks of the Tees, where it pours down the rock, steep of wood prevent your seeing it, but the roar is prodigious. Making use of our hands as well as feet, and descending almost like a parrot, we crawled from rock to rock, and reached from bough to bough, till we got to the bottom under

this noble fall. Noble indeed! for the whole river, (no trifling one) divided by one rock, into two vast torrents, pours down a perpendicular precipice of near four-score feet. The deluging force of the water throws up such a foam and misty rain, that the sun never shines without a large and brilliant rain-bow appearing. The whole scene is gloriously romantic; for on every side it is walled in with pendent rocks an hundred feet high; here projecting in bold and threatening cliffs, and there covered with hanging woods, whose only nourishment one would imagine arose from the descending rain. The scene is truly sublime.

After viewing this beautiful cascade, we returned by another road through this romantic country, and were entertained with the most beautiful landscapes from the top of every precipice. One of these vallies in particular exhibited a landscape more beautiful than the greatest master in painting ever drew. On one side a cascade from the adjacent rocks poured down the broken declivity of the mountain, sometimes lost amidst the dark shadow of the rocks, and then emerging in all its beauty, produced an enchanting effect. In the middle of the valley, the waters had formed a basin among the rocks, surrounded with trees, clothed in the most beautiful verdure; and flowed from thence in a pure tranquil stream. The whole banks of this delightful rivulet were beautifully varied in waving slopes or dales, forming five or six meadows, covered with the most charming verdure; while spreading trees scattered about the edges of these lovely inclosures, completed the scene, and rendered it beautiful beyond description.

Our second excursion from Richmond was towards Schorton, where we turned off to Keplin, to view the seat of Christopher Crowe, Esq; which, among other elegant decorations, contains the following paintings:

Bassan. Adoration of the shepherds. A most capital picture. The expression exceedingly fine; and the colours excellent. The attitude of the virgin is graceful and delicate. The expression of her countenance admirable, and the drapery of the veil about her head well designed. The boy is excellently performed; his attitude fine, and the bold relief of his head incomparable; but, like all the children of painting, has too much animation in his countenance. The old man's head, who leans it on his hand, in a fine stile. The figure, who kneels, and holds the ass by a rope, is extremely well designed; the relief noble, and the spirit of the tints fine: but excellently, as this figure is executed in some respects, in others it is equally faulty; it is of no expression, and the attitude most unmeaning. The figures by the ass, are somewhat expressive, but in nothing relative to the subject of the picture; indeed the whole group of the ass and the three shepherds is strangely introduced, having scarce any thing to do with the business of the piece. The ass's head is surprizingly finished. The landscape is not pleasing.

Upon the whole, the spirit and relief of the figures, with the strength of the colouring, render it a most noble picture; and it is not done in the coarse blotching stile, so common to the pieces which pass under the name of *Bassan*.

Venetian School. Two courtezans, a brown and a fair woman; the latter is very fine, the attitude and the countenance pleasing; and the drapery good. The expression of the light and relief strong.

Horizonti. A large landscape. A castle on a hill, with a river at the foot. The trees with the light behind them well done; the attitudes of the figures very natural; and the goats well executed.

Ditto. A sacrifice. The variety and attitudes of the figures very well imagined; the light between the trunks of the trees on the right lively, and gives a full relief. The colours more natural than in the other piece. Upon the whole, a pleasing picture.

Luca Carlovarli. Four views of Rome.

No. 1. A quay. The attitudes, business, variety, and expression of the figures, good. The water natural;

- tural; and the architecture in a good taste; but the sameness of the colours unpleasing.
- No. 2. The figures spirited, the architecture fine, and the general effect pleasing.
- No. 3. The figures good, but the architecture and ruins not very picturesque.
- No. 4. Fine. The shrubby wood, growing out of the rock, with the light behind it, picturesque and pleasing; the architecture not in the best stile for painting.
- Four views of Venice. The vast variety of the figures in these pictures, very well executed and expressive; the architecture minutely finished; the perspective excellent, and the colours pleasing.
- School of the Carrachi.* A woman pointing out two boy angels to a girl. At present in two pieces. Her figure is very masculine; the relief bold and fine; her left leg almost projects from the canvas. The drapery is good; and the attitudes of the boys excellent.
- Luca Giordano.* Two gateways; fine. The colours very good; and the architecture the same.
- Four pieces of ruins. Very fine.
- Unknown.* Marriage of Joseph before the High Priest. Excellent. The group, attitudes, colours, and expression, fine.
- Ditto.* An *Ecce Homo*, and a *Mater Dolorosa*: companions. The expression of the countenances very great; and the finishing exquisite.
- Ditto.* Leda, and Danae, companions. Most pleasing; the naked finely designed and very well coloured, but both their countenances are devoid of the animation of the moment. Leda turns from her swan with the most perfect indifference.
- Flemish School.* Four pieces of family business in low life. Very expressive and well coloured.
- Rosalba.* Cymon and Iphigenia. Very pleasing. Iphigenia's attitude and body fine; but the colours gone.
- Unknown.* Virgin and child; an oval. Fine.
- Flemish School.* Boors at cards. Expressive.
- Unknown.* Six cattle-pieces, roughly finished, but well executed.
- Brammante.* The offering of the wisemen. The finishing of this piece is very fine: but the ideas are all those of a boor; and one of the necks is twisted even to painting the eye.
- Unknown.* Three small landscapes; companions. The center one spirited and well finished.
- Scarlati.* A madman's brains. This is truly phrensy embodied.
- Viviano.* Landscape. Very fine; the colours elegant, and the perspective light, through the rock picturesque.
- Unknown.* Four small cattle pieces on copper. The colours very fine, and the design spirited.
- Ditto.* Landscape; the flight into Egypt. Excellent.
- Ditto.* Landscape; a hermit's cave. The rocks and trees very wild and fine; and the light through the cavities natural and picturesque.
- Jan. Steen.* Two small landscapes. Pleasing.
- Unknown.* Two pieces on copper. One a wild romantic wood, trunks of trees, &c. The other, rocks by the sea. The last pleasing; the colours of both fine.
- Borgognone.* Two battle-pieces. Done in his wild rough manner, but exceeding spirited.
- Unknown.* A cat's and a grey-hound's head: fine. The latter exquisite.
- Ditto.* Dogs and dead game: good. Their postures fine.
- Ditto.* Diana; most admirable finishing. Nothing more exquisite than the naked; but incomplete where it ought to be most highly touched.
- Ditto.* Saturn and Ops. Ditto. Exceeding fine.
- Ditto.* Paris and the three goddesses. Exquisite finishing. Their attitudes varied, and the naked elegant.
- Ditto.* Hercules and Dejanira. Incomparably finished.
- Ditto.* Seven pieces of fruit, &c. Pleasing.
- Ditto.* A fish-piece, excellent.
- Ditto.* Ditto and cellery. Ditto.
- Ditto.* Another of fish. Ditto.
- Ditto.* Two cattle-pieces. Very pretty.
- Ditto.* Woman with two children.
- Ditto.* A Magdalen. Attitude and colours most pleasing and delicate.
- Ditto.* Cupid and Psyche. Incomparably finished.
- Ditto.* Pan and Cyrius. Fine.
- Ditto.* Venus and a sleeping Cupid. Exceeding fine finishing, expression and attitudes.
- Brugble.* Two figures with fruit and fowls, &c. &c. most capital. The hen in the basket is absolute life; the boldness of the relief one would think beyond the power of paint; for the hollowness of the basket, and the representation of space between the twigs and the hen, are incomparably done. The ducks also excellent. The colouring of the whole picture strong and natural. But the vacancy, the unmeaning inanity of the woman's countenance, beyond conception. In some subjects where idiotism was wanted, she would figure nobly.
- Hanibal Carracche.* An old woman sitting in her chair and reeling. The expression of this piece is surprizingly great. The face and hands most incomparably done; they are nature itself; the drapery a most true imitation; the attitude easy and natural: and, in one word, the whole piece astonishingly executed.
- Unknown.* Two Venetian Gondoliers at cards. Great strength of expression.
- Gisolfi.* Two pieces of architecture. Very fine. Two figures with spears wonderfully spirited.
- Holbein.* Portrait of Count Bragadino, a Venetian nobleman. Fine.
- School of Raphael.* Virgin and child. The common attitude very graceful and fine.
- Lely.* King Charles II. The frame cut out of the royal oak; and the king's privy seal upon it; viz. a Cupid drawn in a car by a lion and a goat; under it Charlotte Litchfield.
- Ditto.* Lady Litchfield.
- Kneller.* Earl of Litchfield.
- Ditto.* Lord treasurer Godolphin.
- Ditto.* The Great Duke of Marlborough.

Having viewed this beautiful range of country, we proceeded on our tour, and next arrived at Allerton, so called by a variation or corruption of the Saxon name Calferton, it is also called North Allerton, to distinguish it from several other towns in this county of the same name. It is an ancient borough, governed by a bailiff, deputed for life by the Bishop of Durham, which bailiff, or his deputy, presides at the election for its members for parliament. This town lies upon the bank of a small river called the Whiske, in the road from London to Berwick, two hundred and twenty-nine miles from London: and consists of only one street, which is half a mile long and well built. King William Rufus gave this place with the fields that surround it to the church at Durham, to whose bishops, Allerton was formerly much indebted for several benefactions. Bishop Comin built a castle here, which was long since destroyed, and the bishops his successors granted it fundry privileges.

On the east side of the town was an hospital, founded by Hugh Pufar, in the latter part of the reign of Henry II. or the beginning of the reign of Richard I. About the time of the dissolution, here was a master, three chaplains, four brethren, two sisters, and nine poor persons, whose revenue were then valued at fifty-eight pounds, ten shillings and ten-pence, *per annum*.

William de Alverton, founded a house of Austin Fryars, about the year 1339; and on the East side of the town was a house of White Fryars, founded by Thomas Hatfield about the year 1354, and dedicated to the Virgin Mary. These benefactors were all bishops of Durham.

This town is rendered remarkable by the battle of the standard in which David king of Scots was defeated by the English. It derived its name from the extraordinary standard brought into the field on that day by the English, being an immense chariot with a very tall mast fixed in it; on the top of which was a cross, and under

under that a banner. This standard, like the Carrociun of the Italians, and Oriflambe of the French was never brought out, but in the greatest expeditions, when the government itself was at stake. The field in which this battle was fought, which was in the fourth year of the reign of king Stephen, is to this day called standard-hill, and some hollow places where it is supposed the Scots slain in the battle were buried, are still known by the name Scots Pits.

Allerton sends two members to parliament, has a good weekly market on Wednesday for cattle and corn, and three annual fairs, viz. February the thirteenth, May the fourth, and October the second, for horses, horned cattle and sheep. These fairs are the most frequented of any in England, and the most remarkable for large fat oxen.

At Lafenby, near this town, John de Lythegraynas, and Alice, his wife, in the eighteenth year of the reign of Edward I. erected a chapel, dedicated to the Virgin Mary, and therein established a chantry, college, or hospital, for a master and six chaplains, whose revenues were valued, upon the dissolution, at nine pounds, six shillings and eight-pence, *per annum*.

At Osmotherly, north-east of Allerton, there seems to have been a collegiate church in the time of Edward I.

Thomas Holland, duke of Surry, earl of Kent, and lord Wake, in the year 1396, founded a Carthusian priory at Mountgrace, north-east of Allerton. It was dedicated to the Virgin Mary, and St. Nicholas, and endowed, at the general dissolution, with three hundred and eighty-two pounds, five shillings and eleven-pence, *per annum*.

Leaving Allerton, we passed on to Whitby, a well-built town, situated on the German Ocean, at the mouth of a small river called the Esk, two hundred and twenty-seven miles from London. Here is a custom-house, and a good harbour, much frequented by the colliers. The best and strongest vessels used in England for the coal trade, are built in this port; upwards of a hundred vessels, of eighty tons burthen or more, belong to it; and vast quantities of butter and corn are sent from hence to London, and sometimes to Holland.

The harbour and piers being somewhat decayed, they were repaired by virtue of two acts of parliament, in the first and seventh years of the reign of queen Anne; and in the year 1733, an act passed to preserve, continue, and keep the said piers in repair for ever.

By means of these several acts of parliament, the piers of this town have been rebuilt and compleated; notwithstanding which for some years past, the entrance into the port has been rendered very narrow and difficult, by reason of a bank of sand, which having gathered considerable round the head of the west pier, the harbour was in danger of being choaked up by it; nor could this inconvenience, in the opinion of the best judges, be redressed, but by lengthening the pier, and extending its head, about a hundred yards farther into the sea. This occasioned another act to pass in the eighth year of the reign of king George II. for lengthening the west pier, and improving the harbour.

At the foot of some high rocks in this town have been found the cornua ammonis, or serpent stones, as they are commonly called from their spiral figure. They are naturally round, but when broken, stony serpents are found in them; but for the most part headless. They are looked upon by some as a *Lafus naturæ*; but more reasonably supposed by others, to be the effects of the universal deluge. These rocks are at the east side of the harbour, nearly perpendicular, and about one hundred and eighty feet above the level of the sea. At high water the foot of these cliffs, is washed by the waves; at low water the sea retires and leaves a dry shore of a considerable breadth, which has very little sand upon it, but is an hard, smooth, flat rock, called by the inhabitants the Scarr, and is in a manner overspread with large, loose, ragged stones, scattered about in great disorder and confusion.

This town was anciently called Streenshall, and Oswy, king of Northumberland held a council here

in the year 663, to determine the controversy between those who kept Easter after the British manner, and those who observed it according to the custom of the Romans, which Augustine, the monk, had lately introduced. After the party for the first had spoken, the other in their answer affirmed, they kept Easter in the manner of St. Peter, on whom Christ promised to build his church, and who was in possession of the keys of Heaven. The king hearing this, asked if it was true that Christ had thus spoken to St. Peter; which the adverse party allowing, the king swore with a solemn oath, that he would not disoblige this porter of Heaven, lest, when he came to the gates, he should remember him; and therefore established the celebration of Easter after the manner of the Romans.

There are mineral waters here which were formerly in great repute but have long since been disused.

About the year 657, a monastery was founded here by St. Hilda, dedicated to St. Peter. It was destroyed in the Danish war, but re-edified soon after the Conquest, and replenished by William de Percy, with Benedictine monks. In the time of Henry I. it became an abbey, was dedicated to St. Peter, and St. Hilda, and valued at the dissolution, at four hundred and thirty seven pounds, two shillings and nine-pence, *per annum*.

Here were formerly two hospitals, one before the year 1160, and another, dedicated to St. John the Baptist, as old as the time of Edward II.

Here is a good weekly market on Saturday, well supplied with corn, and all sorts of provisions, but no annual fairs.

It is said that in the neighbourhood of this town, there are certain fields, over which, if a flock of wild geese happen to fly, they suddenly drop dead to the ground; we enquired of the inhabitants concerning this strange phenomenon, and had it confirmed to us for truth, yet no one could assign any reason for it.

In this neighbourhood are several allum mines, which formerly belonged to the dukes of Buckingham, and are of considerable profit. The process of the allum work is as follows:

Allum is made of a stone, kelp, and urine. The stone is found in most of the hills between Scarborough and the river Tees. It is of a bluish colour, and will cleave like Cornish slate.

The mine, before it is calcined, being exposed to the air will moulder into pieces, and will yield a liquor whereof copperas may be made; but, being calcined, it is fit for allum. Sometimes a liquor will issue out of the sides of the mine, which, by the heat of the sun, turns into natural allum.

When the mine is calcined, it is put into pits of water, supported with frames of wood, about ten yards broad, placed in a current which turns the liquor into a receptory, from whence it is pumped into another pit of mine; so that every pit of liquor, before it comes to the boiling, is pumped into four several pits of mine, and every pit of mine is steeped in four several liquors, before it is thrown away; the last pit being always fresh mine.

Kelp is made of a sea-weed, called tangle. It grows plentifully on rocks by the sea-side. Being dried, it will burn and run like pitch: when cold and hard, it is beaten to ashes, steeped in water, and the lees drawn off.

The boiling-pans are made of lead, and placed upon iron plates, about two inches thick.

When the work is begun, they save the liquor which comes from the allum, which they call mothers; with this they fill two third parts of the boilers, and put in one third part of fresh liquor which comes from the pits. Being thus filled up with cold liquors, the fires, not having been drawn out, will boil again in less than two hours time; and in every two hours the liquor will waste four inches, and the boilers must be again filled with fresh liquor.

After it has boiled about twenty-four hours, there is put into the boiler about a hoghead of the lees of kelp.

presently afterwards the liquor is drawn out into a

settler, made of lead, where it continues about two hours, during which time most of the nitre and slime sink to the bottom.

Then the liquor is emptied out of the settler into a cooler, and about twenty gallons of urine added to it; where it continues, in temperate weather, four days. The second day the allum begins to strike, gather, and harden about the sides, and at the bottom of the cooler.

When the liquor has stood four days, the liquor called the mothers is scooped out into a cistern, the allum remaining on the sides and at the bottom; and from thence the mothers are pumped again into the boiler.

The allum, taken from the sides and bottom of the cooler, is put into a cistern, and washed with water, which has been used for the same purpose; after which it is roached in the following manner:

Being washed, it is put into a pan with a quantity of water, where it melts and boils a little. Then it is pumped into a large cask, where it commonly stands ten days, and is then fit to take down for the market. *Philos. Transf.* Numb. 142.

The crystallization of allum is usually performed in large strong wooden casks, whose staves and hoops are all marked with numbers, that they may be readily put together; in some places iron vessels are used. The casks being filled with the allum liquor, evaporated to a due consistence, and set in a cold place, the allum gradually shoots into large crystals about the sides; the liquor in the middle is then let off by a cock in the bottom, the head of the cask knocked out, and the vessel turned upside down, for the more effectual draining off of the remaining liquid. The crystals are then dried in a warm stove, and packed up in casks; and the mother-ley, or uncrystallized liquor, mixed with fresh aluminous leys. The metallic or vitriolic allumores occasion the greatest trouble; and the allum obtained from them, though it appears white, is never totally free from some metallic impregnation. Considerable differences are found in allum, partly from this cause, and partly from its being prepared with urine or pot-ash, or with fresh or stale urine. These differences are chiefly observed by the dyers, and those who prepare lakes for the painters.

At Groumond, south-west of Whitby, Joanna, wife of Robert de Turnham, founded an alien priory, subject to the abbot and convent of Grandimont, in Normandy. It subsisted till the general dissolution, when there were not above four monks in it, whose revenue was rated at no more than twelve pounds, two shillings and eight-pence, *per annum*.

We next arrived at Gisborough, a fine, well built town, delightfully situated on a rising ground, two hundred and fourteen miles from London, and four miles south-east of the mouth of the river Tees, with a bay, and an harbour for ships. The soil around this place is so remarkably fruitful that it yields the richest pasture, and is covered with a perpetual verdure throughout the year. It has frequently been compared to Puteali, in Italy; but is generally allowed to exceed it in healthiness.

The elevated situation of this town, and the cold breezes from the sea, would render it very bleak, were it not for some high hills which stand between it and the sea, and entirely secure it from every inconvenience of that kind.

Gisborough is not more remarkable for the pleasantness of the place itself, than for the courteous, well-bred, and obliging behaviour of the inhabitants; their extraordinary cleanliness in their diet, and neatness in their houses.

Here was formerly a beautiful rich abbey, built about the year 1119, by Robert de Brus, lord of the town, a Norman knight, with a church; which, by the ruins, seems to have been equal to the most elegant cathedrals, and has been the common burial place for the nobility of these parts. This place abounds with veins of iron, and allum earth of several colours, particularly those of ochre and murrey. These allum mines were first discovered by Sir Thomas Chaloner, tutor to prince Henry, son to king James I. and were first formed by Sir Pau-

Pindar; who, though he paid twelve thousand five hundred pounds rent to the king, one thousand six hundred and forty pounds to the earl of Mulgrave, and six hundred to Sir William Penniman; and had besides, eight hundred men in constant pay by sea and land, was nevertheless a considerable gainer, there being at that time scarce any other allum to be had, and the price twenty-six pounds a ton. But these mines are at present almost wholly neglected, on account of there not being so easily wrought as those at Whitby; a description of which we have just given, and to which place the trade is in a great measure removed. On this coast there are red and yellowish stones, that look like brass, and in taste and in smell resemble copperas, nitre and brimstone; and on the rocks at Huntcliff, which are visible at low water, seals in great droves are seen to sleep, and bask in the sun. These animals have always one upon the watch, who, at the approach of any danger, plunge into the sea, and awakening the rest they all follow.

Gisborough has a weekly market on Monday, and six annual fairs, viz. the third Monday and Tuesday after April the eleventh, for linen cloth and black cattle; Tuesday in Whitsun week, for black cattle and linen; August the twenty-sixth, for linen and cattle; August the twenty-seventh, September the nineteenth and twentieth, and the first Monday after November the eleventh, for horned cattle.

At Handale, near this town, William Percy the third, in the year 1133, founded a small priory of Benedictine nuns, dedicated to the Virgin Mary; in which, at the time of the dissolution, were eight religious, with revenues valued at no more than twenty pounds, seven shillings and eight-pence, *per annum*.

South-west of Gisborough, at a place called Hutton, Ralph de Nevill, about the year 1162, founded a small Cistercian nunnery; but towards the latter part of the reign of Henry II. the nuns were removed to Thorpe, not far from Hutton; and afterwards were settled at Basedale, near Stokesley, where they had a nunnery dedicated to the Virgin Mary; in which were a prioress and nine or ten religious at the time of the general dissolution, when their yearly revenues were rated at no more than twenty pounds, one shilling and four-pence, *per annum*.

Kirkleatham, the seat of Charles Turner, Esq. near Gisborough, is very well worth viewing, though not one of the magnificent shew houses commonly hunted out by travellers. Those who would wish to see an excellent living house, in which the agreeable part of convenience is consulted, without destroying the scale of a large family, will be pleased with this seat, which, it must be allowed, does great honour to the abilities of Mr. Carr.

The line of front is one hundred and thirty-two feet, and the depth sixty-five. The principal floor contains; first, a gallery sixty-one by twenty-one, and twenty-one high; in the middle a bow window, of one third the length of the room, and nine feet projection. A noble room of very pleasing proportions. The cornice of the door-case is supported by Corinthian pillars, the whole very light and elegant, from the design of Mr. Chambers. The chimney-pieces by Wilton, of Siena marble, polished. Plain but elegant.

The dining-room is forty-six by twenty-six, and twenty-two high. The ceiling coved in stucco; the central part in compartments describing an oval, in which is a blazed wreath of branches surrounding a horn pierced with arrows; around it, compartments ornamented with scrolls and festoons; the cove decorated in the same manner and with bas-reliefs. The execution very neat.

The chimney-piece by Wilton, plates of Siena, with ornaments of polished white marble.

A breakfast room, twenty-seven by twenty.

The first bed-chamber, twenty-five by twenty-one; the dressing-room, twenty by eighteen.

The second, eighteen by eighteen; the dressing-room, twenty-four by twenty-one.

The third, eighteen by eighteen,

The fourth, twenty-four by eighteen.

In the Attic story, are ten bed-chambers; in the basement floor five, one dressing-room, a hall, and a billiard room. These apartments are all fitted up for company, as the servants are laid in the offices.

From this sketch it is seen how well the whole space is divided: into an exceeding good dining-room, an excellent rendezvous room, a breakfast one: four principal bed-chambers, with dressing rooms; fifteen other bed-chambers, and a billiard room. It is certainly thrown into apartments with as much judgment as any house in England.

At no great distance are three public edifices, raised by the Turner family, which well deserve notice: an hospital, a public school, and a church, a mausoleum adjoining.

The first is a large handsome building, inclosing three sides of a court, founded by Sir William Turner, as appears by the following inscription over the entrance.

“ This hospital was founded and endowed 1676, by Sir William Turner, knight, lord mayor of the city of London, whose care, sufficiency and integrity in that magistracy and other public offices, in the most difficult times, the unusual presents and grateful acknowledgments of several companies of the city declare; whose charity, and love for his native country, let this foundation testify. The chapel, and the two school houses were erected, and the masters and mistresses houses improved and enlarged, 1742, by the orders and direction of Chalmley Turner, Esq. the present governor.”

The foundation consists of ten old men, ten old women, ten boys, and ten girls: a chaplain, a master, a mistress, and a nurse. A charity of the most useful species. The boys and girls are taken in between the ages of nine and eleven; they leave it at sixteen; are clothed at going out, and at the expiration of seven years, upon bringing certificates of their good behaviour, they have a benefaction of six pounds, thirteen shillings and four-pence; the fund for which cloathing and benefaction was left by Serjeant Turner. The chapel is a small but very neat one, thirty-five feet by thirty-three, the roof arched in compartments, and supported by four Ionic pillars, light and handsome. Over the altar, is a very fine painting on glass: the subject is the offering of the Magi; the heads, attitudes, and group very expressive; the colours exceeding good. On one side Serjeant Turner, the hand imitably done; and on the other, Sir William Turner. The present Mr. Turner, has increased the porter's salary, that no fees may be taken from any persons whatever who view the foundation.

The school is a large handsome quadrangular building, raised in 1709, by Chalmley Turner, Esq. and endowed with one hundred pounds a-year to the master, fifty pounds to the usher, and thirty pounds for the purchasing books and other uses. There is a handsome library, well filled with valuable books; and among other curiosities, a carving of St. George and the Dragon, cut out of one piece of box-wood; the minute delicacy of the execution was, I believe, scarce ever equalled.

The church is a very light and handsome building of stone, raised by Mr. Turner's father, now living. The area within is ninety feet by forty-two, the roof supported by six Tuscan pillars: adjoining is the mausoleum, a circular dome room of twenty feet diameter, built by Mr. Chalmley Turner. Among other monumental statues, here are those of that gentleman and William Turner, Esq. by Shemacher.

From Gilsborough we passed on to Stokesley, a pretty good town, situated near the source of the river Tees, in a fruitful tract of country, two hundred and seventeen miles from London; and watered by the river Wisk. It is a corporate town, consisting of one well built street, about half a mile long. Here is a good weekly market on Saturday, and an annual fair, held on the Saturday before Trinity Sunday, for horses, black cattle, and linen cloth. This is reckoned the largest fair for cattle in England.

At Scrath, not far from this town, Stephen Mienel,

senior, in the time of Henry I. founded a religious house, which was afterwards annexed to the monastery of Gilsborn, to which it was a cell of the canons of St. Augustine.

Yarum, the next town we visited; is situated on the south bank of the river Tees, two hundred and twelve miles from London. It is a corporation, and has a fine stone bridge over the Tees, by the navigation of which it carries on a good trade to London, in lead, corn, and butter.

Before the year 1185, here was an ancient hospital dedicated to St. Nicholas.

Here was likewise a house of Black friars, said to have been founded by Peter de Brus, who died in 1271.

This town has a weekly market on Thursday, and four annual fairs, viz. Thursday before April the fifth, Holy Thursday, August the second, and October the ninth, for horses, black cattle, and sheep.

CURIOUS PLANTS found in Yorkshire.

Purple-flowered mountain garlick. *Allium montanum bicorne purpureum proliferum*. Found on the fens of the mountains near Settle.

Small fine mountain-chickweed, with a milk-white flower. *Alfne pusilla pulchro flore, folio tenuissimo nostras*. Plentifully in the mountains near Settle.

The least twayblade. *Bifolium minimum*. J. B. Found in many parts of this county, on the heaths and moors, among the furze.

Ladies slipper. *Calceolus Mariæ*. Ger. At the end of Helks-wood, near Ingleborough.

Tender ivy-leaved bell-flower. *Campanula cymbalaria foliis*. Ger. Observed in the watery places about Sheffield.

Fair-flowered nettle-hemp. *Cannabis spuria flore luteo amplo, labio purpureo*. Found plentifully among the corn, in the mountainous parts of this country.

Caraways. *Carum seu careum*. Ger. Found in the pastures about Hull so plentifully, that they gather the seed there for the use of the shops.

Purple-avens. *Caryophyllata montana purpurea*. Ger. In the mountains near the rivulets and water-courses about Settle, and other places in the West and North-Ridings of Yorkshire.

Thrift or sea-gillyflower. *Caryophyllus marinus minimus*. Ger. Found in Bleaberry-gill, at the head of Stockdale-fields, not far from Settle.

The wild-cluster-cherry, or birds cherry. *Cerasus avium nigra et racemosa*. Ger. In the mountainous parts of the West-Riding of this county.

Herb-christopher, or baneberries. *Christophoriana*. Ger. In Haselwood, and among the shrubs by Malham-Cave.

The great English fast, or gentle thistle, sometimes called the melancholy thistle. *Cirsium Britannicum repens clusii*. J. B. Found in the mountains about Ingleborough, and other parts in the West-Riding of this county.

Common round-leaved scurvy-grass. *Cocklearia rotundifolia*. Found in great plenty upon Stanemore near the Spittle; and upon Penigent and Ingleborough-hills.

Jagged-leaved fleabane-mullet. *Conyza Hebenitis foliis laciniatis*. Found almost close to the east-end of Shirley Pool, near Rusbymon.

Black-berried heath, otherwise called crow-berries, or crake-berries. *Erica baccifera procumbens nigra*. C. B. Found plentifully on the moors, and boggy mountains.

Dierfwrack. *Fucus sive Alga tinctoria*. P. B. Frequently cast on the shore near Bridlington.

Pepper mushroom, with a milky juice. *Fungus piperatus albus, lacteo succo turgens*. C. B. Found in great abundance in Marton-woods, under Pinno-moor, in Craven.

Mountain crawfoot-cranes-bill. *Geranium batrachioides montanum nostras*. Found in the mountainous meadows and bushes in the West-Riding.

Musked cranes-bill, commonly called musk, or muscovy. *Geranium meschatium*. Ger. Found growing common in Craven.

Mountain-

Mountain-cudweed, or cats-foot. *Gnaphalium montanum album sive pes cati*. Found upon Ingleborough and other hills in the West-Riding.

Bastard hellebore, with long, narrow, sharp pointed leaves. *Helleborine foliis longis angustis acutis*. Found under Bracken-brow near Ingleton.

Bastard hellebore, with a blackish flower. *Helleborine altera atro-rubente flore*. C. B. Found in plenty on the sides of the mountains near Malham, four miles from Settle.

Succory-leaved, mountain hawk-weed. *Hieracium montanum cichorei folio nostras*. In moist and boggy places, in some woods about Burnley.

Winter, or square barley, or bear-barley, called in the north county, beg. *Hordeum polystrichon*. J. B. This endures the winter, and is not so tender as the common barley; and is therefore sown instead of it in the mountainous parts of this county, and all over the North.

Lelly convally, or may-lilly: *Lilium convallium*. Ger. On Ingleborough and other hills.

Moonwort. *Lunaria minor*. Ger. Found very large, and in great plenty on the tops of some mountains near Settle.

Rose-bay willow-herb. *Lyfimachia Chamænerion dicta latifolia*. C. B. Found in the meadows near Sheffield, and divers other places.

Yellow loose strife, with a globular spike or tuft of flowers. *Lyfimachia lutea flore globofo*. Ger. Found in several places in the East-Riding of this county.

Club-mofs, or Wolfs-claw. *Muscus clavatus sive Lycopodium*. Ger.

Cyprus-mofs, or heath-cyprus. *Muscus cavatus foliis Cupressi*. C. B.

Smaller creeping club-mofs, with erect heads. *Muscus terrestris repens, clavis singularibus foliosis erectis*.

Upright fir-mofs. *Muscus erectus abietiformis nobis*.

Seeding mountain mofs. *Muscus terrestris rectus minor polyspermus*. All these sorts are found upon Ingleborough hill. The last about springs and watery places. The first and third are common to most of the moors in the north of England.

Yellow star of Bethlehem. *Ornithogalum luteum*. C. B. Found in the woods in the northern part of Yorkshire, by the Tees-side, near Greta-bridge and Brignall.

Shrub-cinquefoil. *Pentaphilloides fructicosa*. Found on the south-bank of the river Tees, below a village called Thorp; and in many other parts of the county.

Small rough cinquefoil. *Pentaphyllum parvum hirsutum*. J. B. Found in the pastures about Kippax, a village three miles distant from Pontefract.

Common winter-green. *Pyrola*. Ger. Found plentifully on the moors south of Heptenstall, in the way to Burnley.

Sharp-pointed winter-green, with ferrate leaves. *Pyrola folio mucronato serato*. C. B. Founded in Hafel-wood.

Sweet-smelling Solomon's-seal, with flowers on single foot-stalks. *Polygonatum floribus ex singularibus pediculis*. J. B. On the borders of the scars, or cliffs, near Settle and Wharfe.

Birds-eyn. *Primula veris flore rubro*. Ger. Found in the mountainous meadows near Ingleborough, and in several other moist and watery parts of this county.

Winter-green, with chickweed flowers. *Pyrola alfinis flore Europæa*. C. B. At the east end of Rambles-mear, near Helwick.

Winter-green chickweed of Brasil. *Pyrola alfinis flore Brasiliiana*. C. B. Found near Gisborough and other places.

The globe-flower, or locker-gowlons. *Ranunculus globosus*. Ger. Found plentifully in most parts of Yorkshire, in mountainous meadows, and near water-courses.

Red currants. *Ribes vulgare fructu rubro*. Ger. Found in the woods, in the northern part of this country, particularly near Greta-bridge.

Sweet mountain currants. *Ribes alpinus dulcis*. J. B. Found in many parts of this county.

Rosewort. *Rhodia radix omnium autorum*. Found

plentifully on the rocks on the north side of Ingleborough-hill.

The greater English apple-rose. *Rosa sylvestris pomifera major nostras*. Found frequently in the mountainous parts of this county.

Wild rosemary, or marsh holy-rose. *Rosmarinum sylvestre minus nostras park*. Found in mosses and moorish grounds.

The stone-bramble, or raspus. *Rubus saxatilis*. Ger. Found on the side of Ingleborough, and other hills in the West-Riding.

Bay leaved sweet willow. *Salix folio laureo seu lato glabro odorato*. Found by the water side, in the mountainous parts of the West Riding.

Round leaved mountainous dwarf willow. *Salix pumila montana folio rotunda*. J. B. Found on the rocks upon Ingleborough-hill, on the north side, and in other parts of Yorkshire.

Mountain fengreen with heath-like leaves, and large purple flowers. *Sedum alpinum ericoides cæruleum*. C. B. On the uppermost rocks on the north side of Ingleborough.

Small yellow mountain-fengreen. *Sedum minus alpinum luteum nostras*. Found in great plenty on the north side of Ingleborough-hill, near the rivers and springs.

Small mountain fengreen, with jagged leaves. *Sedum alpinum trifido folio*. C. B. Found on Ingleborough, and many other hills in the north part of this country.

Small marsh-fengreen. *Sedum purpureum pratense*. J. B. Found on the rocks near Ingleborough, in watery places.

Broad-leaved rough field-lionwort, with a large flower. *Sideritis arvensis latifolia hirsuta flore luteo*. Found in the West-Riding about Sheffield, and several other places among the corn.

Giant throat-wort. *Trachelium majus Belgarum*. Found in all parts of the county among the mountains.

The lesser meadow-rue. *Theletrum minus*. Ger. Found very common on the rocks about Malham and Wharfe.

Lunar violet, with an oblong wreathen cod. *Thlaspi vel patius leucoium sive lunaria vasculo sublongo intorto*. Found on the sides of mountains, in moist places, and near springs.

Cloud-berries, knot-berries, or knout-berries. *Vaccinia nubis*. Ger. Found growing plentifully on Henekel-hough, near Settle.

Greek valerian, vulgarly called ladder to Heaven, or Jacob's ladder. *Valeriana Græca*. Ger. Found plentifully about Malham-cove, in the wood on the left hand.

Common liquorice. *Glycyrrhiza vulgaris*. Ger. Cultivated for sale in many large gardens in Pontefract.

Remarks on the SEA-COAST of Yorkshire.

The sea-coast of this county is one of the most dangerous parts of the kingdom to ships bound to different ports of England. The mouth of the Humber is very difficult for ships to enter when the wind blows strong at East, unless the pilot be well acquainted with the shoals that lie scattered about the mouth of that river. This difficulty is greatly increased by the rapid current of the river; which, during the ebb, pours down with amazing velocity, and too often carries ships on the shoal. At the same time the sea runs very high occasioned by the wind's blowing directly against the current.

Ships running from the eastward must be careful of a shoal called the Dreadful, which lies about three miles and a half almost due east from the Spurn-head, and on which there is no more than six feet at barometer. If a windmill about three miles to the northward of the Spurn-head be kept in a right line with the tower of Illington church, the ship will fail over

over the middle of the shoal. But if the two light-houses upon the Spurn-head be kept both in one, the ship will pass safely to the southward of the shoal.

A stone bank stretches out above half a mile from the shore of the Spurn-head. A small distance within the Spurn-head, is a small island called the Den, surrounded by a sand, stretching out about half a mile from the beach of the island. About two miles and a half north-east from the Den is a shoal called Trinity-sand, which is dry at low water.

About six miles above Trinity-sand, is Sunk-island, surrounded with a large bank of sand, which is dry at low water, and the tail of it stretching to the east ward, is near four miles long. About five miles above Sunk-island is Whitebooth road, where ships ride in safety, out of the violent current of the river.

From Spurn-head the coast lies north-west-by-west to Bridlington, or Burlington-bay, formed by a point of land, at the northern extremity, called Flamborough-head. About the middle of this bay is a shoal called Smithick-sand, on which there is from two to ten feet water. This sand is about four miles long, three quarters of a mile broad, and about three miles and a half from the shore. It lies north-east and south-west; but there are two channels, one between the main land and the northern extremity of the shoal, and the other at its southern extremity. The former is something more than a mile broad, and the latter a mile and a half: the first has, however, the greater depth of water. Within this sand, ships bound to Bridlington generally come to an anchor, it being very safe riding, especially in northerly and westerly winds.

The northern extremity of this bay is called Flamborough-head; on which there is a light-house, for the safety of ships in the night.

Five leagues to the north of Flamborough-head, is Scarborough, where there is a pier for ships; and in the bay before the town they anchor in five fathoms water, about a mile from the shore. The pier is one of the best in England.

Whitby, the last sea-port in this county, is situated about five leagues to the north ward of Scarborough. A great number of large ships belong to this town, though the harbour is but indifferent; the pier is indeed very capacious.

Of the INHABITANTS of Yorkshire.

This county, under the Romans was inhabited by the Brigantes; and in the third division of Britain by the

emperor Constantine, the northern part was called Maxima Cæsariensis, of which this shire was a considerable part, the city of York being its capital. Under the Saxon Heptarchy, Yorkshire belonged to the kingdom of Northumberland, and was called the province of Deira.

The sharp and healthy air of this county has rendered it remarkable for the great length of the lives of many of its inhabitants. At Dent, a village upon a small river of the same name, south-west of Askring, upon the borders of Lancashire, there were two persons, the father and son, who in 1664 were summoned as witnesses upon a trial at York assizes, when the father was above one hundred and thirty-nine years of age, and the son upwards of one hundred.

At Thirleby, near Helmesley, lived one Mary Allison; who, at the age of one hundred and six years, spun a web of linen cloth, and lived to the age of one hundred and eight years.

But a much more remarkable instance of longevity, was one Henry Jenkins, a native of the same Riding of this county, who died at the age of one hundred and sixty-nine years. As there were no registers old enough to prove the time of his birth, it was gathered from the following circumstances: He remembered the battle of Flodden-Field, fought between the English and Scots in 1513, when he was twelve years old; several men in his neighbourhood, about one hundred years of age, agreed, that from their earliest remembrance, he had been an old man; and at York assizes he was admitted to swear to one hundred and forty years memory. He frequently swam rivers after he was an hundred years old, and he retained his sight and hearing to his death. He had been a fisherman an hundred years, but towards the latter end of his days he begged. A monument was erected to his memory by subscription, at Bolton, on the river Swale, in 1743, on which is an inscription, purporting that he was one hundred sixty-nine years old, and was interred there on the sixth of December, 1670.

MEMBERS of PARLIAMENT for Yorkshire.

This county sends thirty members to parliament, two knights of the shire for the county, two citizens for the city of York, and two burgeses for each of the following boroughs, Aldborough, North-Allerton, Burrow-bridge, Beverley, Headon, Knaresborough, Malton, Pontefract, Richmond, Rippon, Scarborough, Thirsk, and Kingston upon Hull.

D U R H A M.

THIS county is bounded by Northumberland on the north, by the river Tees, which divides it from Yorkshire, on the south; by the German Ocean on the east, and by parts of the counties of Westmoreland, Cumberland, and Northumberland on the west. It is of a triangular figure, measures thirty-nine miles in length, from east to west, thirty five in breadth, from north to south, and one hundred and seven miles in circumference. It is divided into four wards, or wakes, and fifty-two parishes, in which are one city, seven market-towns, two hundred and twenty-three villages, about fifteen thousand nine hundred and eighty four houses, and seventy-nine thousand nine hundred and twenty inhabitants. It lies in the province of York, and forms a diocese of itself.

R I V E R S.

In this county there are sixteen rivers, the chief of which are the Tees and the Were. The Tees rises on the borders of Cumberland, and running east-south-east, receives, besides several less considerable streams, the Laden, the Hade, the Lune, the Bauder, and the Skern; then running north-north-east, it falls into the German Ocean. The Were is formed of three small streams, called the Killop, the Willop, and the Burdop, burns rising near one another in the west part of this county, and within three miles of the head of the Tees. The Were thus formed, runs eastward, and receives the Gaunles, and several smaller streams, and then by many windings it directs its course north-east, and passing by the city of Durham, falls into the German Sea at Sunderland, a considerable port and market town of this county.

Near the conflux of the river Tees and Bauder, about midsummer 1689, there happened an eruption of water, which, inforcing its passage from below, carried away a quantity of earth, that left a chasm of one hundred and sixty yards long, eighty yards broad, and six or seven deep, choaked up both rivers, and killed great quantities of fish. The meadows over which the flood passed, were all spoiled for a time, by the mud which it left behind.

Remarks on the INLAND NAVIGATION of Durham.

There are only two rivers navigable in this county, the Tees and the Were; for with regard to the Tyne, which separates this county from that of Northumberland, it will be considered in our survey of that shire.

The Tees is navigable for vessels of considerable burden to Stockton, and for boats to the influx of the Skern, on which the town of Darlington is situated. The Tees might be easily made navigable to Bernard's-castle, if the trade of that part of the county would answer the expence.

The mouth of the Were receives large ships, great numbers of which load with coals of Sunderland; and the river is navigable for keels to Lumley-castle, where great quantities of coal, reckoned equal to any in the kingdom, are dug, and sent down the river to Sunderland. Small boats passing up to Durham, might easily be extended farther.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of Durham is healthy, and though sharp in the western parts, is nevertheless mild and pleasant towards the sea, the warm vapours of which mitigate the

cold; which, in a situation so far north, must be severe in the winter season. The soil is also different; the western parts are mountainous and barren; the rest of the county is fruitful, and, like the southern counties, beautifully diversified with meadows, pastures, corn-fields and woods. It abounds with inexhaustible mines of lead and iron, and particularly coal, called Newcastle coal, from Newcastle upon Tyne, a large borough town in Northumberland, the port where it is shipped to supply the city of London; and the greatest part of England. The rivers abound with fish, particularly salmon, known in London by the name of Newcastle salmon; and these two articles include the whole traffic of the place. The coal trade of this county is one great nursery for seamen; and the ports of Durham supply the royal navy with more men than any other in the kingdom.

REMARKS on the HUSBANDRY of Durham.

The soil, in general, is a gravelly clay and loam; lets from ten shillings to fifteen the arable. Farms from thirty pounds to two hundred. The course of crops, generally three to a fallow. For wheat, they plough three times, sow two bushels, or two and an half if old ploughing, the latter end of October and beginning of November, and gain from twenty to twenty-five bushels per acre. For barley, they plough three times, sow two bushels, and two and an half, in April, or beginning of May, and gain from three quarters to five per acre. They plough once for oats, sow four bushels on an acre in March, and gain from thirty to forty bushels in return. They plough once for beans, sow four and four and a half bushels broad-cast in February, never hoe them, and gain from twenty to twenty-five bushels, use them for horses, beasts and calves, and split or ground for horses and calves. They plough once for pease, sow four bushels, and four and a half (never hoe them) in March, and gain from thirty to thirty-five bushels. They plough three times for rye, sow two bushels and one fourth, and gain from forty to fifty bushels per acre; it is sown in October, or spring rye in March. For turnips, they plough three times, never hoe them, but value a crop from one pound ten shillings, to three pounds per acre, and use them for sheep, for oxen, cows, and calves. They pare and burn for rape, and plough once after it; sow it in July and August, never feed it, but gain from forty to fifty bushels an acre; it is succeeded by maslin, *i. e.* wheat and rye mixt.

They sow twelve pounds of clover on an acre, with oats, barley, or bigg, gain about three tons of hay; reckon they have better crops after mowing than feeding; many keep it two or three years in mowing, and generally sow wheat after it.

In manuring, they lay three chaldrons of lime (thirty-two bushels to the chaldron), for which they give seven shillings; one shilling and eight-pence a mile for lading, and two shillings and six-pence an acre spreading; expence of pairing from eleven to thirteen shillings per acre, of burning, three shillings and six-pence; ditto, of spreading, one shilling and eight-pence.

They stack their hay in the fields, never chop stubbles, nor fold sheep, except upon turnips; of ashes they lay from fifteen to twenty five loads on an acre: town dung on grass and arable, twenty load an acre; they seldom marle, never on grass ground, nor use any composts.

Good grass land lets from twenty to thirty shillings per acre, for vast numbers of beasts, but more dairying, butter

butter being the commodity of the county; allow an acre and rood of grafs to each ox or cow, and five sheep to an acre. The farmers never lay any manure at all on land of this value. Their breed of horned cattle, chiefly Holdernefs and Dutch; the fize of their hogs, from twenty to twenty-five stone, fourteen pounds weight to the stone. Of oxen, from fixty to one hundred and twenty stone; reckon the produce of a cow at six pounds, seven fhillings. They give, in May, June, and July, from five to nine gallons of milk per day. Profit on a beaft of fifty stone, four pounds, if fold before Martinmas, but more if kept till winter; reckon more profit from breeding than buying in, if the flock is good. They allow four or fix hogs to be maintained by ten cows: calves fuck ten days, or a fortnight; give them skim milk, and some give linfeed cakes. A dairy maid will take care of ten cows. If a cow calves early, her winter hay will coft two pounds, ten fhillings; from that to three pounds they reckon the joift of a cow in winter; in fummer, from twenty-five fhillings to thirty-five, and forty fhillings. They reckon an acre of the above land will fat an ox of fifty stone. Never keep their cows in the houfe, till after calving; and if the weather is good, turn them out again in a month or fix weeks: this is in cafe they calve about Candlemas, which is the moft ufual time for breeding flock. Value of an ox-hide, from fifteen fhillings to two pounds ten fhillings; the Lancashire hides will give more. The fize of their flocks, two hundred sheep in one hundred acres of feeding land to a proportionable flock of other kinds; profit per sheep, eight fhillings; reckon in winter, that one acre of good turnips will keep twenty sheep, the average fleece from fix to feven pounds weight. To one hundred acres of arable land, they keep four horfes and fix oxen, and drive two horfes and two oxen in a plough; do an acre a day; reckon the annual expence of a horfe, four pounds, five fhillings a year, the fummer's joift of one pound, ten fhillings; in winter, two pounds, fifteen fhillings; feed their oxen, in winter, with oat and barley ftaw, &c.

They break up their stubbles in September and October, give four fhillings and fix-pence, and five fhillings an acre for ploughing, never chop ftaw into chaff, but mix their chaff with the corn for horfes. Hire of a cart, three horfes, and driver, from four to five fhillings a day. Average of hay per ton, for feven years, from twenty-five fhillings to thirty. In the hiring and ftocking farms, they reckon four hundred pounds fufficient for one hundred a year, half grafs, half arable; fome of the particulars as follows:

Half a year's rent in hand, 50*l*.

Seed for fowing down fpring corn, 12*l*. 10*s*.

To the management of fallow, 13*l*. 10*s*.

Implements, 40*l*.

They give from thirty-three to thirty-feven years purchase for land.

Tythe compofition for wheat in general, 2*s*. in the pound rent; employment of the poor at spinning, earn from 4*d*. to 7*d*. a day; young and old, at knitting, from 4*d*. to 6*d*. Moftly drink tea.

They carry their corn from five to feven miles computed.

Leafes from feven to twenty-one; terms from three to five years; lives none.

Surveyor's rate, 3*d*. per acre.

Price of L A B O U R.

In harveft, men, 1*s*. and 1*s*. 6*d*. a day; women, 9*d*. and 1*s*.

In hay-time, men, 1*s*. women, 8*d*.

In winter, men, 10*d*.

They feldom reap by the acre:

Mowing fpring corn, they have 1*s*. 6*d*. an acre.

Grafs, 2*s*.

Ditching per rood, 4*d*. to 8*d*.

Threfhing wheat, 3*d*. a bufhel.

Barley, from 1*s*. to 1*s*. 3*d*. per quarter.

Oats, from 10*d*. to 1*s*. 2*d*. ditto.

Beans, from 10*d*. to 1*s*. ditto.

Water-furrowing with a fpade, $\frac{1}{2}$ *d*. a rood:

Filling carts, from 1*s*. 6*d*. to 2*s*. per fcore.

Headman's wages, 15*l*. a year.

Plough lads, 6*d*. a day.

Boy of ten or twelve years old, 4*d*.

Dairy-maid's wages, from 5*l*. to 6*l*. a year.

Other maids, 3*l*. to 5*l*. ditto.

Value of a man's board, wafhing and lodging, 3*s*. 6*d*. a week.

Maids, ditto, 5*l*. or 6*l*. per annum.

Their hours of labour in a day, from eight to fix, but few work fo long. In winter, from nine to five.

Rife of labour within ten years, 3*d*. per day.

Great improvements are however made in this method of husbandry, by a very ingenious gentleman.

He takes but two crops to a fallow, gives five or fix ploughings for wheat, firft and fecond, from angle to angle, and harrowing after each, fows in September, or as foön as poffible in October, and gets thirty bufhels on an acre in general, better in quality than the common; he ploughs as often for barley, unlefs after turnips or cabbages, and fows two bufhels of feed; fows it the latter end of March, or early in April, and generally reaps five quarters. He fows North Frizeland kind of oats, three or three and a half bufhels to an acre, in March, and gains fifty bufhels or better upon good loam, and has had eighty bufhels per acre.

He ploughs three times for beans; fows three bufhels, or three and a quarter broad-caft in February, and gains from twenty-eight to thirty-five bufhels; feldom grows any peafe, unlefs to plough in for manure, and then fows three bufhels in February. Gives the fame earths for rye, as wheat gains, from forty to fifty bufhels per acre, and which weighs three or four pounds more a bufhel than the common; it is little ufed, as the poor people will fcarcely buy it.

For turnips he ploughs five times, hoes them in June, July, and Auguft, and values them from four to five pounds per acre, ufes them for fat oxen, sheep, calves, and cows (except milch.) This gentleman has fed many sheep upon rape, and the crop answered extremely well; he thinks the better for it, as he obferved it yielded moft where it was neareft eat; he had eighty sheep upon feventeen acres, and fold twenty of thofe sheep for forty guineas; he had twelve laft of feed upon thofe acres, eighty bufhels to the laft.

He never keeps clover but one year, and ploughs in the after-grafs, which he gets a good crop of wheat after; he has had pretty good crops of tares, and extreme good oats after them; the tares fown after barley.

His general praftice is to lay two loads of dung upon an acre, befides two chaldrons of lime; of foap-afhes he lays from twenty-five to thirty load per acre, alfo common afhes. Sometimes lays forty loads of town-dung per acre, and has laid the fame of clay on an acre of gravelly land in ploughing, which has answered extremely well. The compoft he has chiefly made ufe of is a mixture of lime, virgin earth, dung of all kinds, with foap-afhes; and to take care that the lime and horfe litter do not lie together, (as it will be apt to fire) it muft be turned as foön as the lime is found dead, otherwife it will run together and cement; this kind of compoft fhould be turned at leaft three times, if you lay it upon grafs anywife moffy. He fhould recommend Du Hamel's cultivator, or five-coulter plough, properly fet for the foil, to be run over the ground before you lay the compoft on. N. B. This compoft has answered and improved all the different foils this gentleman has tried it on, particularly ftony, gravelly clay. From being let at ten fhillings per acre, it is let at one pound, two fhillings and fix-pence per acre.

He has obferved, that land in general that wants draining has a *stratum* of clay, otherwife the water would not be kept up fo near the furface, (except where it is a peat-earth). The firft thing to be done is to take the proper levels, and confult from whence comes the origin of your fprings. A main drain then to be properly placed, and fide drains from that main drain; all thefe to be cut into the clay, which you will generally have

before

16c
100
before you, are three quarters deep. The drains at the top should be at least two feet wide, at the bottom three inches, having proper spades for that purpose; he would chuse to fill them all with stone, many do it with small faggoting, others with sods, the grass-side downwards, cut like a wedge; this latter is what is commonly used, but he has found by experience they soon decay. N. B. Bean-straw, or any straw, laid upon the stones, before the drains are filled up. Expence, three-pence, and three-pence half-penny a rood for digging; two-pence a rood for filling with stone, and filling up the level; three-pence halfpenny for lading and getting of stone, if it is got out of a quarry; it will be less, if the stone is got upon the land.

He has always kept to the Holderness and Dutch breed of horned cattle; he has had oxen of one hundred and thirty-five stone, fourteen pounds weight to the stone; he generally sells his three year olds, after wintering, at twenty-one and twenty-two pounds *per* beast; gives his calves new milk for two months, then old milk and bean-meal till they are turned to grass, or feed them with good lettuce, lucerne, &c. He has found that one acre of good turnips will keep twenty sheep the winter, but that one acre of cabbages will keep above fifty. The weight of his wool, *per* sheep, generally runs to twelve and fourteen pounds weight, that are fat, the first year clip ten pounds.

This gentleman's method of laying arable to grass, is first to reduce the moulds as fine as possible by a fallow, sowing it down with barley or bigg; the latter he would chuse in moor soils, after the corn is come up; sows eight bushels of common grass-seeds, two pounds weight of cow-grass, ditto of rib-grass, ditto of yellow trefoil, and roll it the first dry season.

CITY and MARKET TOWNS.

The city is Durham, and the market towns are Stockton, Hartlepool, Aukland Bishops, Darlington, Barnard-Castle, Marwood, and Sunderland.

We crossed the river Tees to Durham, and proceeded on our tour to Stockton, situated about two miles from the mouth of this river, and two hundred and twenty miles from London. It is a corporation town, governed by a mayor and aldermen, and is one of the four ward towns of the county. It is well built, is a place of great resort and business; and is of late so considerably increased in its trade and the number of its inhabitants, that a church has been erected in the place of a little old chapel. The river is capable of bearing ships of good burden at this place, but the current is frequently dangerous. For the management of the port there are a collector of the customs, and other inferior officers. The port of Stockton is a member of the port of Newcastle, as appears by a commission returned into the Exchequer in the reign of king Charles II. and by a report made in the third year of the reign of king George II. of the dimensions of its three lawful quays for shipping and landing goods.

Here is a good trade to London for lead, butter, and bacon; and the ale here is much admired by the lovers of that liquor. The bishop of Durham is lord of the manor, and its bishops had formerly a house here.

Stockton has a weekly market on Saturday, and an annual fair July the eighteenth, for toys, &c.

In the neighbourhood is a course where there are frequent horse-races.

At Norton, a village somewhat to the north of this town, was an ancient collegiate church, dedicated to St. Mary, consisting of eight prebendaries, or portionists, before the year 1227, and then in the patronage of the bishop of Durham. It was valued upon the dissolution at thirty-four pounds, thirteen shillings and four-pence, *per annum*.

At Gretham, a village between Stockton and Hartlepool, Robert de Stichill, bishop of Durham, in the year 1262 built and endowed an hospital for a master and brethren, dedicated to St. Mary and St. Cuthbert. Its yearly revenues were valued upon the dissolution at

ninety-seven pounds, six shillings and three pence, clear. It is still in being, and the mastership of it in the gift of the bishop of Durham.

Hartlepool, the next town we visited, stands on a little promontory, six or seven miles above the mouth of the Tees; and is encompassed on all sides but the west by the sea. It is a famous ancient corporation, with a very safe harbour; governed by a mayor and alderman, with other subordinate officers. It depends chiefly on the fishing trade, and its harbour, which is much frequented by the colliers passing to and from Newcastle, particularly in strefs of weather. There are several officers of the customs belonging to the harbour.

From this place the shore affords a delightful prospect, to those who sail by a pleasant variety of corn fields, meadows, villages, and a variety of other views, which continue uninterrupted for the length of fifteen miles, till a passage opens for the river Were.

Here was formerly an ancient monastery, called Heorthy, founded upon the first conversion of the Northumbrians to Christianity, about the year 640, as some suppose, by a religious woman, named Hieu; or according to others, by St. Fega. At this place was also a house of Grey friars, founded before the year 1275; but by whom, or what its revenues were at the dissolution, we have no account of.

Here is a weekly market on Monday, and four annual fairs, viz. May the fourteenth, August the twenty-first, October the ninth, and November the twenty-seventh, for toys, &c.

From hence we passed on to the city of Durham, originally by the Saxons called Dunholme, a word compounded of Dun, a hill, and holme, an island in a river, and expressive of its situation upon a hill, almost surrounded by the river Were. The Saxon name Dunholme, was changed by the Normans to Duresme; which was afterwards corrupted into the present name Durham. This city is two hundred and sixty-two miles from London, and is said to have been first incorporated by king Richard I. and was anciently governed by bailiffs, appointed by the bishops, and afterwards by an alderman and twelve burgesses. Queen Elizabeth gave it a mayor, aldermen, and common council; but it is now governed under a charter procured by bishop Crew, of king Charles II. by twelve aldermen, twelve common council men, a recorder, town clerk, and other officers, who can hold a court-leet and court-baron within their city, under the stile of the bishop, for the time being. They keep also a court instituted to regulate disorders at fairs, called a pye powder court, from *pye*, foot, and *powder*, dusty, because it was held only during the fair, and made its determinations after a summary examination, before the dust was shaken from the feet of the suitors. The fairs pay about twenty-pounds a year toll, to the bishop or his lessee. The bishop of Durham is a temporal prince, being earl of Sadbergh, a small town near Stockton, which he holds by barony; he is sheriff paramount of this county, and appoints his deputy, who makes up his audit to him, without accounting to the Exchequer. He is also as count palatine, lord of this city, and appoints all officers of justice, and other inferior magistrates.

The situation of this city is so pleasant and healthy, and the country in which it stands so plentiful, that it is much frequented by the neighbouring gentry. It is surrounded with a fortified wall, and is about one mile long, and one mile broad; the form of it is compared to that of a crab, the market place resembling the body, and the streets the claws. The principal building in it is the cathedral, which is dedicated to Christ and the Virgin Mary. It is a magnificent pile, four hundred and eleven feet long, and eighty broad, with three spacious isles, one in the middle, and one at each end; that in the middle is one hundred and seventy feet long, the eastern isle is one hundred and thirty-two feet long, and the western one hundred feet. In the western isle was a chapel of the Virgin Mary, called Galilee; the outside of this chapel was adorned with two handsome spires, covered with lead, the towers of which are still standing. In the north tower there were four large bells,

bells, three of which, soon after the reformation, were added to three in the middle tower, but they have been since cast into eight. The eastern isle was formerly called the Nine Altars, because in the front facing the church, there were so many erected; that is, there were four in the north part of the isle, four in the south, and one in the middle. The middle one, which was dedicated to St. Cuthbert, the patron of the church, was the most beautiful, and near it was a rich shrine of that saint. The whole building is strongly vaulted, and supported by large pillars. The waincot of the choir is well wrought, the organ large and good, and the font of marble. There is a handsome screen at the entrance into the choir, which is one hundred and seventeen feet long, and thirty-three broad. Many of the windows are very curious, particularly the middle window, to the east, which is called the Catharine Wheel, or St. Catharine's Window; it comprehends all the breadth of the choir, and is composed of twenty-four lights; in the south end of the church was a window called St. Cuthbert's, in which was painted the history of the life and miracles of that saint; on the north side was a third window, on which the history of Joseph was painted, and which was therefore called Joseph's window. In the chapel called Galilee, the women, who were not allowed to go farther up than a line of marble, by the side of the font, used to hear divine service, and it then contained sixteen altars, for the celebration of the mass, but it is now used for holding the consistory court. The chapter-house, in which sixteen bishops are interred, is a stately room seventy-five feet long, and thirty-three broad, with an arched roof of stone, and a beautiful seat at the upper end, for the instalment of the bishops. The decorations of this church are said to be richer than those of any other church in England, it having suffered less by the alienation of its revenues, than any other cathedral. King Henry VIII. established the present endowment of this church, for a dean, twelve prebendaries, twelve minor canons, a deacon, sub-deacon, sixteen lay singing men, a school master, usher, master of the choristers, a divinity reader, eight almsmen, eighteen scholars, ten choristers, two vergers, two porters, two cooks, two butlers, and two sacristans.

This cathedral is adorned with a fine cloyster on the south-side, formerly glazed with painted glass; on the east side is the chapter-house, the deanery, and a building called the Old Library; on the west side is the dormitory, and under that are the treasury and song house; on the north side is the new library, which is a large lightsome building, begun by dean Sudbury, on the site of the old common refectory of a convent. Besides the cathedral there are six parish churches, three of which stand in the principal or middle part of the town, and the other three in the suburbs. Those in the town are St. Nicholas, or the City Church, which stands in the market place, St. Oswald's commonly called Elvet Church, and St. Margaret's, called Cross-gate Church, which is a parochial chapel to St. Oswald's. Those in the suburbs are St. Giles's, commonly called Gilly-gate Church, St. Mary's the Great, commonly called North Bailey Church, and St. Mary's the Less, called South Bailey Church; St. Mary's the Great is also called Bow Church, because before it was rebuilt its steeple stood on an arch crossing the street.

South of the cathedral is the college, a quadrangular pile of building, inclosing a spacious court; it consists at present of houses for the prebendaries; and the greatest part of it has been either new built, or very much improved since the restoration. Opposite to the college gate, upon the east side, is the exchequer; at the west end was the guest-hall, for the entertainment of strangers, and near it the granary, and other offices of the convent. On the north side of the cathedral is the college school, with a house for the master; and between the church-yard and what is called the castle, or the bishop's palace, is an area, called the Palace Green; to the west of this is the shire hall, where the assizes and sessions are held for the county, and near it is a fine library, built by doctor Cosin, who was bishop of this see in the time of Charles II. and the exchequer built by

doctor Nevil, who was bishop afterwards. In the exchequer are the offices belonging to the county palatine court. On the east side of the cathedral is an hospital, built and endowed by bishop Cosin; and there are two schools; one at each end of it, founded by bishop Langley, and new built by bishop Cosin. On the north side of the cathedral is the castle, which afterwards became the bishop's palace; it was built by William the Conqueror, and the outer gate of it is now the county gaol.

The other public buildings of this city are the toll-booth, by which may be understood the custom-house, which stands near St. Nicholas's church; the cross, and a conduit, both in the market place; there are also two stone bridges over the river Were.

The bishopric of Durham was anciently a part of the country inhabited by the Brigantes; upon the establishment of the Saxon heptarchy it became a part of the kingdom of Northumberland, and was one of the counties which, being on the south side of the Tine, were called Deira, to distinguish them from the northern division of the kingdom of the Northumbrians, known by the name of Bernicia. Soon after the Saxons were converted to Christianity, this county was given by their kings to St. Cuthbert, bishop of Lindisfern, an island in the county of Northumberland, now known by the name of Holy Island, and to his successors for ever; the monkish writers therefore called this county the Patrimony of St. Cuthbert, in the same sense as the Romish ecclesiastical state is to this day called the Patrimony of St. Peter. The Danes and Normans confirmed this grant of the Saxon kings, and added several other liberties and privileges to the church of St. Cuthbert. In the reign of William the Conqueror, one Walcher, a native of Lorrain, being bishop of Durham, bought the earldom of Northumberland of the king, and then assuming the office of a secular judge, sat in court, and with unlimited authority determined all causes at his pleasure. This is supposed to have been the origin of the temporal power of the bishops of Durham, and upon this purchase it is supposed to have been made a county palatine.

The bishops of Durham, as counts palatine, have borne in their seals a knight, armed on horseback, brandishing a sword with one hand, and holding out the arms of the bishopric in the other. The common people insisting on their privileges, have refused to march into Scotland in time of war, pretending that they were Halwerk men; that is, men bound to do nothing but holy works, that they held their lands to defend the body of St. Cuthbert, and that they were not to serve out of the confines of the bishopric, either for the king or for the bishop. King Edward I. seized the prerogatives of one of these bishops, and took away many of the privileges of the see, some of which however the succeeding bishops recovered, and so great was their power even after its abridgment by king Edward I. that it became a maxim, *Quicquid rex habet extra comitatum Dunelmensem episcopus habet intra, nisi aliqua sit concessio aut præscriptio in contrarium*, i. e. 'Whatever prerogative the king has without the county of Durham, the bishop has within it, unless there be some concession or prescription to the contrary.' Though the canons forbid any clergyman to be present when judgment of blood was given, yet the bishop of Durham might on those occasions sit in court in his purple robes, whence came the old saying, *Solum Dunelmense stolâ jus dicit et ense*.

The bishop of Durham had power to call a parliament, and to create barons to sit in it, of which parliaments, and the subsidies granted by them, the ancient rolls of Durham give an account. The bishop had also power to raise taxes, and to coin money: the courts were kept in his name, he appointed all judges and justices of the peace, and all writs ran in his name. All recognizances entered upon the bishop's close rolls in his chancery, and made to him or in his name, were as valid within this county, as those made to the king were in other counties; and the bishop had a register of writs of as much authority, as that in the king's courts. They who alienated freehold lands without his leave, were obliged

to sue to him for a pardon, which he might grant not only for intrusions and trespasses, but also for felonies, rapes, and other crimes. He had power to grant licences for building chapels, founding chauntries and hospitals, for making boroughs and corporations; he also granted markets and fairs, created officers by patent, either for life or during his pleasure; but these grants were valid no longer than the life of the bishop who made them, except they were confirmed by the dean and chapter.

The bishop had several forests, chaces, parks, and woods in this county; he was lord admiral of the seas and other waters belonged to the palatinate, had his vice-admirals, his courts of admiralty, and his officers of beaconage, and commissioners of water passages; he directed commissioners of array; a great part of the lands in the palatinate belonging to him, and was held of the fee in capite; to him belonged all moors and wastes, and he had copyhold and hallmot courts, and the tenure of the lands is much the same to this day: the lands, goods, and chattles of such as were convicted of treason, fell to the bishop, and he still claims all forfeitures upon outlawries and felonies. Such were the privileges of the bishops of Durham, when they were abridged by a statute of the twenty-seventh year of the reign of king Henry VIII. which in effect stripped them of their palatine power, particularly that of granting pardons, creating judges, and making out judicial writs and indictments; but the bishops and their temporal chancellors were still permitted to act as justices of the peace.

In the reign of king Edward VI. this bishopric was dissolved, and the parliament gave all its revenues and immunities to the crown; but queen Mary repealed this act, and restored the see to the state in which king Henry the Eighth left it.

As this county was a kind of principality, distinct from the rest of the kingdom, it never sent representatives to parliament till the reign of king Charles II.

The city of Durham owes its origin to the monks of Lindisfern, a monastery in a small island south-east of Berwick upon Tweed, a borough town of Northumberland, who being with Eardulfus, their bishop, driven from their habitation by the Danes, retired first to Chester in the Street, a small town north of Durham, about the year 883, carrying with them the relics of their bishop, St. Cuthbert; having continued there one hundred and thirteen years, they removed to this place about the year 995, and deposited their relics under a small oratory, which they built of sticks and twigs, wattled together: this oratory, Aldwin, the bishop, who then transferred the episcopal see from Chester in the Street to Durham, afterwards improved into a cathedral. This cathedral William de Careleph, who was bishop of Durham about the year 1083, pulled down, and began a more stately church, which was finished by his successors. In a chapel, dedicated to St. Mary, at the west end of this cathedral, stands the tomb of Venerable Bede, a monk, and an ancient British historian, and over it hangs an old parchment scroll, enumerating his virtues; where, among other encomiums it is said, that he was *omni major, & angelus in orbis angulo*; and it concludes with *hac sunt in fossa Bedæ Venerabilis ossa*. In this cathedral are still preserved many old records of Scotland, the kings of that country having been very great benefactors to it.

There was a provost and secular canons settled in the cathedral soon after it was built, by Aldwin; but those being expelled by bishop William de Caslepho, with the consent of the Pope and King, a prior and convent of Benedictine monks were placed in their stead, who continued till the general dissolution, when the bishopric was valued upon the whole, at three thousand one hundred and thirty-eight pounds, nine shillings and eight pence, *per annum*, and two thousand eight hundred and twenty-one pounds, one shilling and five-pence clear, and the revenues of the church at one thousand three hundred and sixty-six pounds, ten shillings and nine-pence, *per annum*.

Durham sends two members to parliament; has a weekly market on Saturday, and three annual fairs, viz. March the thirty-first, a three day fair; the first day, for horned cattle, the second day for sheep and hogs,

and the third day, for horses; Whitsun-Tuesday, and September the fifteenth, for horses, cattle, &c.

Near this city may still be seen the remains of a Roman military way, which by some writers is supposed to be part of the causeway called Ikenild Street, reaching from the mouth of the river Tine, to St. Davids in Wales.

Chester in the Street, a small town near Durham, in the way to Berwick, was called by the Saxons *Concerpen* and is therefore supposed by Mr. Camden to have been the Roman *Condercum*, a station, *ad lineam valli*, where the *Notitia* tells us the first wing of the *Astures* kept garrison; others think the *Condercum* must have been nearer to the *Picts Wall*, and therefore suppose it to have been *Sunderland*.

In the year 1057, Egelric, then bishop of Durham, laid the foundation of a church here, in memory of the residence of his successors, the monks of Lindisfern and their bishop, in this place; and while the work was carrying on, he dug up so large a sum of money, supposed to have been buried by the Romans, that thinking himself sufficiently enriched, he resigned his bishopric, and retired to a monastery at Peterborough, a city in the county of Northampton, where he had formerly been abbot, the buildings of which he very much improved and enlarged. He constructed several other public works of great expence, particularly a causeway from Deeping to Spalding, which are two market towns in Lincolnshire, over a marshy country, with several bridges in proper places. This causeway is still called *Egelric Road*.

Lanchester, a town standing north-west of Durham, upon the Roman high-way called *Watling-street*, is supposed by Mr. Camden to be the Roman *Longovicum*, several inscriptions having been dug up here which favour that opinion, and it appearing by many ruins, to have been fortified with a strong thick wall, and adorned with temples, palaces, and other public buildings.

Binchester, a town upon the river *Were*, south-west of the city of Durham, is supposed to have been the *Vinovium* of Antoninus, and the *Binovium* of Ptolemy. Here are still visible the ruins of walls and castles; a variety of seals, urns, and other antiquities have been dug up in this place, particularly some Roman coins, called *Binchester pennies*; and two altars, one of them inscribed *DEAB. MATRIB. Q. LO - - - CL. QVINTIANVS - - - COS. V. S. L. M.* and the other - - - - - *TRIB. COHORI. CARTOV - - - MARTI VICTORI GENIO LOCI ET BONO EVENTVI*; the inscription being imperfect.

In the channel of the *Were*, a little below *Branspeth*, a village near Durham, there are many very large stones, which are never covered but when that river overflows, and over which if water is poured it will in a short time become brackish; and at *Saltwater Haugh*, not far distant, there is a salt spring in the middle of the *Were*, which is best perceived in the summer, when the water of the river is low, then it is seen bubbling up. The water of this spring tinges all the stones near it with a red colour; it is as salt as any brine, and when boiled, it produces a great quantity of bay salt, though not so palatable as common salt.

Near *Branspeth* there is a medicinal spring strongly impregnated with sulphur, and between that spring and the city of Durham is a *Chalibeat* water.

Hunwick, a small village upon the *Were*, south-west of Durham, is remarkable for its wells; the water of which, though very sweet, is strongly impregnated with sulphur. It is in high repute, and much frequented.

Bishop *Randal* built an hospital at *Kepeyre*, a village near Durham, for a master and brethren. It was dedicated to St. Giles; and by the bounty of *Hugh, Putacco, Pufar, or Pudsey*, a succeeding bishop of Durham, and other benefactors was so well endowed, as upon the dissolution, to be rated at the yearly revenues of one hundred and eighty-six pounds and ten-pence; in the whole at one hundred and sixty-seven pounds, two shillings and eleven-pence clear.

At *Finchale* a village near Durham, there was an hermitage, which bishop *Randal* gave before the year 1128 to the monks of Durham, by whose consent the holy man *Godric*, afterwards canonized, enjoyed the

same years, and devoted the place particularly to the service of St. John the Baptist; upon Godric's death, in the year 1170, some monks of Durham retired hither, and had an allowance made them towards their support, by Hugh, Bishop of Durham, in the time of Henry II. Henry de Putacco, son to bishop Hugh, about the year 1196, having very much increased the revenues, a prior and monks of the Benedictine order, subordinate to Durham, were settled here. At the dissolution this house consisted of a prior and eight monks, whose yearly revenues were valued at one hundred and twenty-two pounds, fifteen shillings and three-pence.

At Sherburn, a village near Durham, there was an hospital for lepers, founded by bishop Hugh, and dedicated to St. Mary Magdalen. The yearly revenues of this house at the dissolution amounted to one hundred and thirty-five pounds seven shillings clear; it then maintained sixty-five lepers, besides a master and several priests. It is still in being, and the mastership is in the gift of the bishop of Durham.

At Lanchester was a collegiate church for a dean and seven prebendaries, founded by Anthony Beck, bishop of Durham, in the year 1283, and valued upon the dissolution at forty-nine pounds, three shillings and four pence, *per annum*.

Richard duke of Gloucester, afterwards Richard III. obtained licence from king Edward IV. in the seventeenth year of his reign, to found a college in the castle here, for a dean and twelve secular priests, ten clerks and six choristers, dedicated to Jesus Christ, the Virgin Mary, St. Margaret and St. Ninian, and to purchase lands, not exceeding the yearly value of four hundred marks; but what was done in consequence of this grant does not appear.

Here was an hospital of St. John, valued upon the dissolution at five pounds, nine shillings and four-pence *per annum* clear; and is yet in being, and the gift of the mastership is in the lord chancellor of Great Britain.

Six miles from Durham is Lumley-castle, a seat belonging to the earl of Scarborough, and pleasantly situated in a fine park on the banks of the Were.

The castle is a large square building, with towers at each corner, and has a large court yard in the middle. It contains a great number of spacious apartments, some antique and others modern. The paintings are valuable, many of them representing the ancestors of that noble family for some centuries past, in the habits of their time.

It is reported that king James I. lodged in this castle, when he entered England to take possession of the throne; and being shewed by the bishop of Durham a fine picture of the antient pedigree of this family, which carried much higher than his majesty thought credible, said he had learned something during his stay in the castle; for he was before ignorant, that Adam's surname was Lumley.

The park, besides the pleasantness of the situation, has another and still more valuable circumstance to recommend it; that of being most full of veins of coal, in the county. This, together with a navigable river, by which the coals are carried down to Sunderland, renders Lumley-park an inexhaustible mine of treasure to the family.

Having viewed Lumley-Castle, we continued our journey to Aukland-Bishops, formerly called North-Aukland, to distinguish it from another town called Aukland, both situated in a district of this county known by the name of Auklandshire, from which they derive their name. Aukland is probably a corruption of Oakland, the land of Oaks, this part of the country containing several fine forests, and abounding with oak trees. This town afterwards becoming a market town, was called Market Aukland; and is now called Bishops Aukland, from a palace which belongs to the bishops of this see, who are likewise in possession of the castle and lordship. The palace was built, or rather improved, by Anthony Beck, bishop of Durham, in the reign of Edward I. who incastellated it, built the great hall, in which are several pillars of black marble speckled with white, and added a small chapel, in which he placed a

dean and six prebendaries, allowing the quadrangle on the west side of the castle for their habitation. The gate of the college, and the adjoining buildings, were erected by bishop Booth, in the time of Henry V. By these several improvements it became a magnificent palace, and so continued till it fell into the hands of Sir Arthur Haselrig, baronet, a commander for the parliament in the time of the civil war, who pulled most of it down, and built a new house, with the materials. Upon the restoration it came into the hands of Bishop Cosin, who pulled down the house built by Haselrig, and added a large apartment to what remained of the old building, besides erecting a new chapel, in which he lies buried; from which time it was called Bishops-Aukland. He likewise founded and endowed an hospital for ever, for two married men, and two married women.

This town is situated near the conflux of the rivers Were and Gaunles, at the distance of one hundred and eighty four miles from London. It is reckoned one of the best towns in the county, the air being good, and the houses in general well built. Here is a strong stone bridge over the river Were, erected by bishop Skirlaw, in the year 1400. The church is a handsome edifice, and the mother church to all the district of Auklandshire. It was anciently collegiate under the vicar; but bishop Beck, abovementioned, gave him the title of dean, with twelve prebendaries under him; and Thomas Langley regulated them to an equality, restored the solemnity of their service, and got his appointment confirmed by Henry VI. This church has long since ceased to be collegiate; at the dissolution it had a dean, and eleven prebendaries. The deanery was rated at one hundred pounds, seven shillings, and two-pence *per annum*, and the eleven prebends at seventy-nine pounds, sixteen shillings, and eight-pence.

This town has a weekly market on Thursday, and four annual fairs, viz. Ascension day, for horned cattle, swine, and all sorts of wares; the day following for sheep and horses; Corpus-Christi day, for cattle; and Thursday before October the tenth, for sheep, horses, and cattle of all sorts.

From Aukland-Bishops, we proceeded to Darlington, situated upon the river Skern, over which it has a long stone bridge, two hundred and forty-three miles from London. This is one of the four ward towns in the county of Durham, and consists of several long streets, which, not being paved, are in the winter very dirty. It has a spacious market place, a free school, and a handsome church, with a tall spire. This is one of the three churches appointed to receive the secular priests when the monks entered into their places in the church of Durham. By being thus made collegiate of a dean and four prebendaries, it was exposed to be alienated in the time of Edward VI: and a small pension only was reserved out of it to the minister. Here were likewise charity lands, in several places, which were partly assigned for the maintenance of the free school. Here are, or were, not long ago, some remains of an episcopal house, which being rather a burden to the see, than any convenience to the bishops, has been a long time neglected.

Darlington is a post town, and a great thoroughfare in the road from Berwick to London. It is one of the most considerable places in the north of England, for the manufacture of linen, particularly that sort called Huckaback, used for table cloths and napkins, of which great quantities, some ten quarters wide, are sent to London, and other places. There is also a finer sort of cloth made here, some of fourteen shillings a yard. The workmen employed in this manufacture earn from ten-pence to two shillings and sixpence a day, and women and children proportionably. One master manufacturer employs above fifty looms, and asserts that he could easily set more to work, and employ numerous women and children, if the idle part of the poor in the town could be persuaded to turn industrious.

Here is a weekly market on Monday, and four annual fairs, viz. Easter Monday, Whitsun-Monday, Monday fortnight after Whitsun-Monday, and November the twenty-second, for cattle horses and sheep.

At Oxenhall, a hamlet between Darlington and the Tees, are three large deep pits full of water, called Hell-kettles,

1^f kettles, and by the common people thought to have no bottom. Some suppose these pits to have been sunk by an earthquake; because, from an ancient book intitled the Chronicle of Tinnmouth, it appears that on Christmas-day, in the year 1179, the earth at this place rose to a great height above the level, in which state it continued till the evening, and then sinking down with a horrid noise was swallowed up, and left a pit full of water, which has continued ever since. The people here have an opinion that these pits communicate with the river Tees, and with each other, by means of subterraneous passages.

This opinion Mr. Camden seems to have adopted, and as a proof of the fact, he relates, that one Cuthbert Tonstall, a bishop of Durham, having put a goose, which he marked for the purpose, into one of these wells, found it again in the river Tees. This story however is not now credited, and by a later account of the pits it appears, that the depth of the deepest is not above thirty yards; the most probable opinion seems to be, that they are old coal pits, rendered useless by the rising of water in them, which is always cold; though Mr. Camden says it is hot. It is remarkable that the pits are always full to the brim, which is upon the same level with the river Tees, there seems therefore to be good reasons for believing, that the water in the pits is supplied from the river, whether the passage of communication would permit a goose to go through it or not; nor does this communication make it necessary that the pits should be deeper than they are.

Presbridge, or Presbrigg, a village upon the Tees, west of Darlington, is supposed by Dr. Gibson to have been originally called Priest-bridge, either from two neighbouring priests who built a bridge of stone over the river here, instead of a wooden bridge which they found there, or from some priests who were appointed to officiate in a chapel, the ruins of which are still to be seen near the bridge. A Roman altar, with a fair inscription, was dug up here not long ago, and several urns, coins, and other antiquities, have been found in this neighbourhood. It is generally believed that the Roman highway, from Cottarick to Binchester, enters the county of Durham at this town.

Nesham, a village upon the Tees, south-east of Darlington, and in the road from London to Durham, is remarkable for a ford over the river, where the bishop at his first coming to take possession of the see, is met by the country gentlemen, and where the lord of the manor of Scockburn, a village south-east of Nesham, upon the same river, advances into the middle of the stream, and presents him with a faulchion, as an emblem of his temporal power, which he returns to him again, and then proceeds on his way.

In the same neighbourhood is Raby Castle, the seat of the earl of Darlington, situated in the midst of a most extensive territory, which gives his lordship a very fine command around him. The castle is a noble massy building of its kind, uninjured by any modern strokes inconsistent with the general taste of the edifice; but, simply magnificent, it strikes by its magnitude, and that idea of strength and command one naturally annexes to the view of vast walls, lofty towers, battlements, and the surrounding out-works of an old baron's residence. The building itself (besides the courts) covers an acre of land; the size may from thence be concluded. The south front is very beautiful, the center of it is from a design of Inigo Jones; nothing in the Gothic taste can be more elegant than the stile and proportion of the windows.

The rooms are very numerous, and more modern in their proportion and distribution than one would easily conceive to be possible within the walls of so ancient a building; but by means of numerous passages and back-stairs, the apartments are extremely convenient, well connected, and at the same time perfectly distinct; his lordship has projected several improvements, which will add yet further to the spaciousness and convenience of the apartments in general.

The bed-chambers and dressing-rooms are of a good size and proportion, and several lower apartments large,

and elegantly fitted up. One of the drawing-rooms is thirty by twenty; and the adjoining dining-room, fifty-one by twenty-one; the windows of both of plate-glass, and in the smallest and lightest of brass frames. His lordship purposes enlarging the latter of these rooms. Near it, there is a rendezvous apartment, ninety feet long, thirty-six broad, and thirty-six high, a proportion that pleases the eye, at the very first entrance; it is however to be improved by an addition of thirty feet in length, by building, at one end of it, a circular tower, in the same stile as the rest of the castle; by which means the south front will be greatly improved, and the room will receive not only an additional space, but the light at bottom of a (circular bow) window, which it wants at present.

The park and ornamented grounds around the castle are disposed with very great taste. The lawns, woods, plantations, objects, &c. are remarkably beautiful. Entering the lawn from the plantations near the house, the whole sweep has a very fine effect. The dog-kennel, a Gothic ornamented building, is seen on one side rising out of a fine wood, and beautifying the scene much: upon the hill to the right, the Gothic farmhouse, a simple but pleasing design, in a very fine situation; in front, along the valley, several clumps of trees are scattered, and between them his lordship's farmhouse on a rising hill; a building which greatly ornaments the grounds. This part of the lawn is finely inclosed on three sides with thriving plantations. This leads into the extended part of the lawn, which is, for its extent, the most beautiful I have any where seen: the inequality of the ground is remarkably favourable to its beauty; it consists of fine sweeps of grass, stretching away to the right and left, over hills most elegantly spread with plantations on one side, and presenting to the eye a fine waving uninterrupted surface through a valley, on the other. It loses itself in such a manner among the woods, as to give room for the imagination to play, and picture an extent superior to the reality. In front, upon a fine rising hill, is situated the farm-yard, with a most elegant Gothic screen to it.

From this hill you look back on a very fine scene. To the left, the whole is bounded by a most noble range of planted hanging hills, which extend to the woods in front, surrounding the castle to the distant prospect, in a most picturesque manner: the hollow scoops of lawn are peculiarly beautiful: to the right, it has a noble sweep through the valley, with a prodigiously extensive prospect over it to Rosebury-topping, &c. Nothing can be more beautiful than this whole view, which is composed of the most elegant disposition of ground imaginable; the hanging hills spread with wood; the hollow scoops of grass, spacious lawns, and distant prospect upon the whole fill the eye, and please the imagination.

Winding up to the right, and moving along the terrace, which is a natural one, but leads through an extensive plantation, the views it commands are very fine. You look down upon the farm, and the hill upon which it stands, which waves through the valley in a most pleasing manner; throwing your eye more in front, you catch a lake breaking upon the view in irregular sheets of water, just over the tops of the lower woods; the effect most truly picturesque. Upon the right, the whole valley is commanded, and the market town of Staindrop well situated among inclosures and straggling trees.

Advancing, the prospect varies, a fine sweep of cultivated hill is seen upon the left, and the Gothic farmhouse, ornamenting all the surrounding grounds: descending into the vale, you catch the town and church of Staindrop, most picturesquely, among the trees. Further down, from among the sloping woods, through which the riding leads, the castle is seen rising most nobly, from a fore ground of wood, in a stile truly magnificent.

Having visited all the places worth surveying in the neighbourhood of Darlington, we proceed to Bernard Castle, which takes its name from Barnard Baliol, great grandfather to John Baliol, king of Scotland, who

erected a castle here, and built the town. It lies on the north side of the river Tees, at the distance of two hundred and fifty three miles from London, and consists chiefly of one handsome street, with lanes branching from it. In the reign of Edward IV. the duke of Gloucester, afterwards Richard III. erected a college here for a dean and canons; and in the same reign an hospital was founded for a master and three poor women. The manufactures of this town are stockings, bridles, reins and belts; and it is famous for the best white bread in all the country.

Here is a weekly market on Wednesday, and four annual fairs, viz. Easter Monday, Wednesday in Whitsun-week, St. James's day, and July the twenty-fifth, for cattle, horses, and sheep.

At Winston, a village upon the Tees, about four miles east of Barnard-castle, are seen the remains of a Roman highway, which may be traced from Binchester to Cattarick, a village near Richmond, a considerable borough town of Yorkshire.

At Staindrop, a small town, five or six miles north-east of Barnard-castle, Ralph Nevil, earl of Westmoreland, in the time of Henry IV. founded a college for a master or warden, six priests, six clerks, six decayed gentlemen, six poor officers, and other poor men, dedicated to the Virgin Mary, and endowed at the dissolution with the yearly revenues of one hundred and seventy pounds, four shillings and six-pence in the whole; and one hundred and twenty-six pounds, five shillings and ten-pence clear.

Marwood, the next place we visited, is a small town on the river Tees, at the distance of two hundred and fifty-five miles from London. It has nothing of note but a stocking manufactory, and a park, which reaches from this town to Barnard-castle. Here is a small market on Wednesday, but no annual fair.

We now directed our way to the northern parts of the county, in order to visit Sunderland, and in our way were amused with many delightful prospects, and took the advantage of viewing the beautiful seat of — Carr, Esq. at Cocken.

This seat has the advantage of a fine river, in some places very rapid, and in others, calm and smooth; it takes a very fine waving course through the grounds, and has the noble advantage of a various shore, in some places composed of noble rocks, in others of hanging woods, and also of cultivated inclosures. Art has judiciously aimed at nothing more than enabling the spectator to view these beauties to the best advantage.

The first point to which we were conducted, is a seat in a small circular plot, among the wood, north of the house, from which Chester steeple is caught in a very picturesque manner, between two projecting hills of wood. The spot is on the brink of a precipice, at the bottom of which the river bends very finely. The country is in general wild and uncultivated, but to the left is a hill of wood, which varies the scene.

Winding a little to the left, the walk leads to the dairy, from which, though very near the seat just described, the view is at once quite different. The country is now cultivated; the river divides, and you command it both ways. To the right is a very fine scar of rock, nobly crowned with pendent wood.

You are next conducted down the hill, and pursue the walk around a fine large meadow upon the banks of the river; it then enters a wood under a most romantic wall of rock; the walk (a terrace on the edge of the river) is totally the work of art, being cut out of the rock with much difficulty, and at a great expence. The romantic scenery of these rocks is exceedingly fine, for oaks, elms, and other trees grow out of every cleft to a great height, and hanging over your head, almost threaten you as you move. The wild imagination of Salvatore has scarcely pictured any thing more striking, or in a more spirited stile than this variety of wood, breaking forth from the craggy clefts and chasms of these noble rocks. This intermixture of rock and wood is truly romantic and picturesque. The river aids the general

effect, by the rapidity of its current; for rarely fifty rocks and stones, the roar is in unison with the water, and all together tend strongly to impress upon the mind an idea of awe and terror.

Advancing through this noble scene, the view is varied through a grass dale, the rocks are lost, and the scene varied. On one side the river is a hill covered with wood; and you view the other through a thicket of hedge in a most pleasing manner; it is a prospect of a rock, with a fine scattering of shrubby wood beautifully variegated. Here you should turn and view the rocks you have left; the sun shining on them gives their reflection, in the smooth parts of the river, in a stile very picturesque.

Still advancing, you catch in front among the wood a ruin on the banks of the river, half covered with ivy, and backed nobly with wood; the river rapid and romantic, under a new wall of formidable rocks. Just before you come to the abbey, you may remark an old oak, so connected with rock, that one may almost call it half wood and half stone.

Opposite the abbey the rocks give a fine curve, and under them the river and terrace wind in the most beautiful manner. It is here quite an amphitheatre of wood and rock; wild, romantic, and sublime.

Seating yourself on a bench upon the little hill under the rock with an elm in front, the view is very striking. To the right the wall of rocks presents its bold front, the river losing itself under them, and the opposite steep of wood, in the most beautiful manner. To the left a fine wave of woody hill; the river, rapid in its course, fills your ear with the sound of its current.

Coming to the turn of the walk, the prospect beyond upon the rocks is prodigiously fine. They are seen as if they were in perspective, and their tops, all crowned with oaks, have a noble effect.

Winding up to the alcove on the hill to the right, you see a prodigious fine range of steep woods, hanging over broken rocks, in a stile peculiarly noble. At a distance you catch a scar of rock quite embosomed in a thick wood. The river winds through the valley beneath, and breaking into several distinct sheets of water, throw a beautiful variety over this romantic scene; it loses itself to the left under another sweep of fine hanging woods. You look down upon the ruined abbey, the opposite banks of the river, in a hollow, beautiful and picturesque. Above it, rises in front a fine waving terrace into inclosures; and over all, an extensive and beautiful prospect. Upon the whole, the view is truly beautiful.

From hence, crossing a few inclosures to come again into the ornamented grounds, the path you enter winds on the brink of a woody precipice, upon which you look in a very romantic pleasing manner. It leads down to the river (here a smooth and gentle current) through a wild rugged way, and there brings you to another shore of pendent, craggy, broken rock, fringed with wood, in a picturesque manner. In one place, almost under the dairy, it bulges forth in a vast projecting body, almost threatening to thunder into the river, and obstruct every drop of its stream. A noble scene. The walk takes a winding course through a thick wood, to the terrace in front of the house, from which the view is totally different from any of the preceding; it looks down upon a deep winding valley, quite filled with wood: a fine bending hollow—The noise of the river at bottom raging over the rocks is heard, but no where seen; nor can any thing be more romantic than this effect: for looking down into the hollow, without perceiving the water, the imagination at once takes fire, and pictures a horrible depth of precipice, far beyond the truth; but in which it is somewhat assisted, by the thickness of the wood breaking the line of sound.

Upon the whole, Cocken has received noble gifts from nature, and the assistance she has had from art has been the work of an elegant fancy, conducted by as correct a taste.

In the house are several pictures, which please the lovers of that noble art.

Pouffin.

From Cocken we proceeded to Sunderland, which, according to some writers, has been thus called from its situation at the mouth of the river Were, which, together with the sea, almost surrounds it, rendering it a peninsula, or a piece of land almost Sundered from the continent; others with more probability, think the name derived from the Saxon word Sonderland, which signifies a particular precinct, with privileges of its own. It is a populous well built town, two hundred and sixty-

three miles from London, and is both a borough and sea port; but how it is governed does not appear. Here is a very fine church, the principal architect in the building of which, was one of the rectors of it, the reverend and worthy Mr. Daniel Newcome, who likewise spent the greatest part of his income in beautifying and adorning it. He began his improvements by building a dome, adjoining to the east end, into which he removed the altar, placing it under a canopy of inlaid work, supported in front by two fluted pillars of the Corinthian order, with proper capitals; but this gentleman died before his good intentions were compleated. The port of Sunderland was formerly so very shallow, that all the ships were obliged to take in their loading in the open road, which was sometimes very dangerous to the keelmen or lightermen who brought the coals down to the ships; the ships therefore which load here were generally smaller than those in the neighbouring ports, but as they rode in the open sea they were ready to sail as soon as they had taken in their loading; a very considerable advantage: for they have been known to sail, to deliver their coals at London, to beat up against the wind in their return, and to get back before the ships at Shields (a considerable port at the mouth of the Tyne) which were loaded before them, had been able to get over the bar: but this inconvenience has been lately in a great measure removed.

Those who are delighted with sea-prospects, may here see twenty or thirty sail of ships coming in with a flowing tide from the coasting and foreign ports, fifteen or twenty going out on their respective voyages, and thirty or forty sail at anchor in the road, taking in their cargoes. A bathing-house, like those at Scarborough, has been erected here, and a taste for politeness and elegance has been introduced into the town. Here is a very fine pier, which affords a pleasant walk, as well as shelter for the ships, and is said to have cost about nineteen thousand pounds. They have also deepened the south channel, by taking up part of the rock.

So great is the trade of Sunderland, that in 1753, there belonged to this port alone about one hundred and ninety ships, which are chiefly loaded with coals, the staple commodity of the place, and the produce of the adjacent country, whence many people are employed, and great sums brought in. In the summer season, there are about ten thousand tons of lime and lime-stone carried from this river in small sloops of about twenty or thirty tons. It is said that there were loaded at this port in 1748, 2497 sail of ships; and there were loaded at the port of Sunderland, in the year 1752, besides the small sloops already mentioned,

	Coasters	T. Ports	Total

	Michael.	1271	65	1336
	Christm.	480	29	509
		3424	173	3597

This account is exactly transcribed from the custom-house books of that year, and many of these ships were from one hundred to five hundred tons burthen. The amount of the duties of goods exported and imported, from and to foreign parts, *communibus annis*, is about ten thousand pounds. And as it is computed, that about two hundred and sixty thousand Winchester chaldrons of coals are carried coastways, whereon there is a duty of five shillings a chaldron on delivery, amounting to sixty-five thousand pounds; the whole revenue arising to the crown from the imports, exports, and produce of Sunderland, may be reckoned about seventy-five thousand pounds, *per annum*; so that possibly, with respect to the duty arising from it, it may be the sixth, or at least the seventh port in the kingdom.

This town has a weekly market on Friday, but no annual fair.

Weremouth, called also Monk Weremouth, a town situated on the north bank, at the mouth of the Were, opposite to Sunderland, was given by king Egfrid to abbot

abbot Benedict Biscopius, who founded a monastery here, which he dedicated to St. Peter. It suffered in the Danish wars, and was burnt down in an inroad made by Malcolm, king of Scotland, in the year 1070; it was afterwards began to be rebuilt by Walcher, bishop of Durham; but his successor, William de Carilepho, about the year 1083, removed most of the monks to Durham; to which Weremouth became a cell for three or four Benedictine monks. It was valued upon the dissolution at twenty-five pounds, eight shillings and four pence, *per annum*.

A woman at this town being safely delivered of a fine boy, was, seven weeks afterwards, on the nineteenth of April, 1744, taken ill while she was employed in her household affairs, and brought to bed of another boy, who was a fine child and likely to live.

Near this town is a very elegant seat called Hylton-castle, of which we have given a perspective view. It belongs to the ancient family of the Hylton's; and in it is still preserved the title of the bishop's barons.

About six miles to the north of Weremouth, lies South-Shields, or Sheales in this county, so called to distinguish it from North Shields in Northumberland, and because it lies on the south side of the mouth of the river Tine, as the other does on the north side. This place is of great note for its salt works, here being above two hundred pans used for boiling sea water into salt, of which so vast a quantity is made here, as not only furnishes the city of London, but all the towns on or near the coast between this place and that city, and upon the navigable rivers that come into the sea on that side; likewise all the counties, which are furnished by the navigation of the Thames, and the meadows to the west and south of London. It is said that in these works they consume near one hundred thousand chaldrons of coals every year; the truth of this is sufficiently confirmed by the vast mountains of ashes which are raised near the works, and which they have no other way to dispose of. This place is principally inhabited by the people employed in these works; there are, however, several substantial masters of ships, who make this the place of their residence; but even these are chiefly concerned in the salt-works, and likewise in the coal trade; this, as well as North-Shields being the station for most of the Newfoundland coal fleet, till the coals are brought down from Newcastle in barges and lighters. There are several glass-houses also along the Tine, and one in particular on the river Were, the workmen of which are foreigners; but there is no certainty from whence they come: it is, however, believed that they are Normans, and that their ancestors were removed hither from Sturbridge in the reign of Edward VI. or queen Elizabeth.

Some years ago was dug up at this place a large Roman altar, of an entire coarse rag stone, four feet high; the front of it had an inscription, which, by what remains of it, we have reason to believe should be read thus: DIS DEABVSQ; MATRIBVS PRO SALVTE M. AVRELI ANTONINI AVGVSTI IMPERATORIS — VOTUM SOLVIT LVBENS MERTIO OB REDITUM. On the backside of this altar was engraved in bas relievo a flower pot; on one side was a cutting knife, and the ax used in sacrifice, in bas relievo; and on the other side was an ewer and ladle. It is supposed that this altar was erected upon Caracalla's return from his expedition against the Scots.

Near Whitborn-Lefard, a small town on the shore to the south of South-Sheales, upon the banks of the river Tine, near its mouth, a great number of copper coins were dug up some years ago, most of them of Constantine, with the sun on the reverse, and the words SOLI INVICTO COMITI. Two were of the emperor of Licinius, two of Maximianus, and one of Maxentius, having a triumphal arch on the reverse, and the words CONSERVATORI URBIS.

Ebchester, a town lying north-west of Chester in the Street, upon a small river called the Darwent, which runs into the Tine, derives its name from Ebba, a Saxon saint, the daughter of Ethelfrid, king of Nor-

thumberland, who lived here about the year 630; it was discovered, not many years ago, the tradition is, the Roman station, about two hundred yards square, and large suburbs, where a variety of ancient remains have been dug up, among which was an altar and an urn with a little cup in it.

In the year 1286, Anthony Beck, who was then bishop of Durham, made the church, which had been left at Chester in the Street, by the monks of Lindisfarne, when they were removed to Durham, collegiate, consisting of a dean, seven prebendaries, five chaplains, three deacons, and other ministers. The vicarage and prebends of this church were valued, upon the dissolution, at seventy-seven pounds, twelve shillings and eight pence, *per annum*.

St. Ebba built a monastery at Ebchester, before the year 660, which was afterwards destroyed by the Danes. Horsley supposes Ebchester to be the Vindomora of the Romans; that the church, with part of the town, stand within the old station, the ramparts of which are still visible, and that a military way passes by this town to Corbridge, and so to Scotland.

The inhabitants affirm, that there have been two or three loads of burnt ashes found here, with some large bones and teeth. In the year 1728, a countryman, who was ploughing within a mile of this station, fixed his plough upon something which he could not move; and upon opening the earth discovered an oblong square stone, which, with more assistance, he took up. Under it was found a cavity composed of six erect stones, with the interstices walled up; and within it an urn about eight inches high. About a Roman mile and a half to the south, was also discovered the foundation of a square watch tower, six or eight yards to the west of the military way.

Gatehead, lying on the south side of the Tine, is as it were the suburb of Newcastle, in Northumberland, from which it is divided by the river only; and over that there is a stately stone bridge, with an iron gate in the middle of it, having the arms of the bishopric of Durham upon the east, and those of Newcastle upon the west side, and serving as the boundary between the county of Durham and that of Northumberland. This town, in time of the Romans, was called Gabrosentum, a name derived from two British words, *Gaffr*, a goat, and *Pen*, a head; the Saxons also called it *Læzpheved*, and the ancient historians *Capræ Caput*, i. e. *Goat's head*, a name which Mr. Camden supposes it to have derived from some neighbouring inn, known by the sign of a goat's head. When king Edward VI. suppressed the bishopric of Durham, he annexed this place to the town of Newcastle; but queen Mary soon after restored it to the church. It is thought to have been built before Newcastle, which yet is very ancient, and to have been a frontier garrison against the Scots and Picts. In the time of the Romans it was defended by the second cohort of the Thracians.

Here was anciently a monastery, of which nothing more is known than that Uttan was abbot of it before the year 653.

In the reign of king Henry III. here was also an hospital dedicated to the Holy Trinity, for a chaplain and three poor men. Here likewise was an hospital for four chaplains, founded by Nicholas de Turnham, bishop of Durham, about the year 1247, and dedicated to St. Edmund, the bishop. It was granted, with all the lands belonging to it, in the twenty-seventh year of the reign of king Henry VI. to the prioress and nuns of St. Bartholomew, in Newcastle, and was valued, upon the dissolution at five pounds, nine shillings and four-pence, *per annum*.

Jarro, Yarro, or Girwy, a village near the mouth of the Tine, is remarkable for having been the birth-place of Venerable Bede. In this place he also died, and was buried in the year 734, and his body continued here till it was removed to Durham.

The church of this town was founded by king Egfrid, as appears by the following inscription on the church wall: DEDICATIO BASILICAE SCI PAVLI VIII KL. MAI ANNO XVI ECFRIDI REG.

horrid use king Egfrid reigned no more than fifteen
water.

here A monastery was founded about the year 684, by king
the gfrid. It was dedicated to St. Paul, and appropriated
to monks of the same order, under the same abbot as
at of Weremouth; and like that also become at last a
all to Durham. It was valued at the dissolution at
thirty eight pounds, fourteen shillings and four-pence,
per annum.

The rivers Tees and Were in this county are with-
out doubt the Touafis, and Vedra of Ptolemy; the
river Were is also the same which Bede calls Wirus.

REMARKS on the SEA-COAST of Durham.

The coast of Durham is in general high land, border-
ed with rocks and sand, extending to some distance from
the shore. A little to the northward of the mouth of
the Tees, which separates this county from Yorkshire,
is Hartlepool, of which an account has already been
given. About a mile and a half to the southward of
the town is the road where ships come to an anchor in
three, four, five and six fathom water, and ride very
securely in all winds between the north and west. There
is very little water in the pier at low water, but suffi-
cient depth at high water for colliers, and other coast-
ing vessels, which there lie safe in all winds. About three
quarters of a mile to the northward of the pier is the old
harbour, where there is more water than in the pier;
but the channel is too narrow for ships to enter. All
round the promontory on which the town of Hartlepool

is situated, is a sand extending about a quarter of a mile
from the shore, and sprinkled with rocks.

This sand extends along the shore in the same manner
to Sunderland, the largest seaport in this county. The
sands extend to a greater distance at the mouth of Sun-
derland harbour, which is now greatly frequented since
the new pier has been erected. Formerly the ships took
in the coals in the road, the bar at the mouth of the
harbour being then almost dry at low water.

The rocks are scattered all along the shore from Sun-
derland to the mouth of the Tyne, especially off Suter-
point, where the ledge extends to near a mile from the
shore.

There are few curious plants in this county, which
are not to be found elsewhere; however, there are four
taken notice of, namely, The wild northern cherry,
with small late ripe fruit, *Cerasus sylvestris septentrionalis*.
Growing on the banks of the Tees, near Bernard castle.

Red currants, *Ribes vulgare fructu rubro*, in the
woods, both in the bishopric of Durham, and in the
northern parts of Yorkshire and Westmoreland.

Shrub cinquefoil, *Pentaphyllides fructicosa*, in several
places in this county:

Common ox-eye, *Bupthalmum vulgare*, Ger. Found
on a bank near the river Tees, not far from Sugburn
in this bishopric.

MEMBERS of PARLIAMENT for this County.

Durham sends eight members to parliament, two
knights of the shire for the county, two burgesses for
the town of Colchester, two for Harwich, and two for
Maldon.

N O R T H U M B E R L A N D.

THIS shire was formerly used in a much greater latitude and extent than it is at present; comprehending all those counties, which, according to the import and meaning of the word, lay beyond, or on the north side of the Humber, and included Yorkshire, Durham, Lancashire, Westmoreland, and Cumberland, as well as this shire.

Northumberland, as now circumscribed, is divided, from Durham on the south, by the rivers Derwent and Tyne, from Scotland on the north, and west by the river Tweed, the Cheviot-hills, and other mountains; it is bounded by part of Cumberland on the south-west, and by the German ocean on the east. Its general form is that of a triangle, the sides of which are unequal. It measures from north to south about fifty miles, from east to west forty miles, and is one hundred and fifty miles in circumference.

This, with some of the adjoining counties in Scotland, was in the time of the Romans inhabited by the Ottadini, or Ottatini, a people supposed to have been so called from their situation upon, or beyond the river Tyne; as the ancient Britons called the country on the west of the river Conway, in the county of Caernarvon, in Wales, by the name of Uch-Conway, and the county on the west side of the river Gyrrow, in Denbighshire, by the name of Uch-Gyrrow, and named several other particular districts, from the river or mountain beyond which, with respect to them, such districts were situated, it is probable that they gave the name Uch-Tin to the country bordering upon or beyond the Tyne; and that from the British name Uch-Tin, or Uch-Dyn, the Romans formed Ottadini, or Ottadini.

But as it appears that these Britons, who in the time of the Romans dwelt near the Picts-Wall, of which an account will be given in the description of Cumberland, were all known by the general name of Mæatæ, and it is thought that the Ottadini were a tribe or division of the Mæatæ; some have conjectured, that instead of Mæatæ we should read Næatæ, which name might be derived from Naid, or Nawd, a word that in the ancient British language means a defence, or security, as the wall upon which they bordered might be termed: be that as it may, the Mæatæ were undoubtedly the people, who in that memorable revolt of the Britons against the Romans, in which the Caledonians were brought into the confederacy, first took up arms.

These people being uneasy under the Roman government, conspired with the Caledonians, in the reign of the emperor Severus, and threw off the yoke, which so enraged the prince, that having assembled his army in order to reduce them, he had the cruelty to order his soldiers to give them no quarter; but his death prevented the execution of this inhuman command, and the Britons were left masters of this province, till Theodosius, some time after landing in England, recovered it out of their hands.

After the Romans had withdrawn their forces, the Britons, who had been exhausted by the bravest of their youth being sent abroad to fight the battles of the Romans, were obliged to call in the Saxons to assist them against the Scots and Picts; but when the Saxons had vanquished their enemies, they settled here themselves, and divided the south part of the island into seven kingdoms, of which Northumberland was one of the chief. It was first brought under the Saxon yoke by Offa, the brother of Hengist, and his son Jebusa.

This county lying on the borders of Scotland, whose inhabitants often made inroads into it, partly for conquest, and partly for pillage, it was at length found ne-

cessary to constitute particular governors to guard and defend the borders, and these were called lords of the East, West, and Middle Marches. At the same time every man possessed of great wealth, found himself obliged to provide a castle for his own safety and defence.

R I V E R S.

This county is extremely well watered with fine rivers, the chief of which are the Tweed, the North and South Tyne, the Coquet, and the Read. The Tweed rises in Scotland, and running north-east, is joined by the Bow-bent, the Bramish, the Till, and other smaller streams; it parts England from Scotland, and flows into the German sea at Berwick. The South Tyne rises near Alfton-Moor in the north-east part of Cumberland, and running north-west to Featherston-Haugh, near Halt-wesel, there forms an angle, bending its course north-eastward, and being joined by two small rivers, called the East and West Alon, joins the North Tyne near Hexham. The North Tyne, which is much the most considerable, rises in a mountain called Tyne-head, on the borders of Scotland, and flowing south-east, receives a small river, called the Shele; then continuing the same course, is joined by a considerable stream, called the Read; and having received the South Tyne, passes by Newcastle, and discharges itself into the German ocean below Tinmouth.

The Coquet rises on the borders of Scotland, a little to the north of the source of the Read, and running eastward is joined by several streams, passes by Rothbury, and falls into the German ocean at Warkworth.

The Read rises on a mountain, called Readquire, and at its source is a considerable river; and after having run a considerable distance south-east, in which course it receives many other streams, it falls into the north Tyne near Billingham.

Remarks on the INLAND NAVIGATION of Northumberland.

The only river navigable in this county, except near their mouths, is the Tyne, in which barges pass up to Hexham, near twenty miles from the mouth of the Tyne; and boats might pass much higher with a little assistance from art.

The Tweed, which separates England from Scotland, is navigable a considerable distance from its mouth; but most of the places by which it flows are situated in Scotland.

The mouths of several of the other rivers are navigable. The Wentbeck, on which the town of Morpeth is situated, will admit small vessels, and might easily be made navigable to that town.

The Coquet has also a considerable depth of water at its mouth; but there being no town of consequence on its banks, the navigation of it has been neglected.

The small river Alne, on which the town of Alnwick is situated, might also be rendered navigable to that town, at a small expence; but has been hitherto neglected.

We shall consider the navigation of the mouths of these rivers, in our remarks on the sea-coasts of Northumberland.

A I R, S O I L, and N A T U R A L P R O D U C T I O N S.

The air of Northumberland is not so cold as might be imagined from its being situated so far to the north;

1st kettles, bottom.

an earthq lies between the German and Irish seas, in the the Chrc part of England, it has the advantage of being mas-day, by the sea vapours, and hence the snow seldom to a grea, except in the most northern parts, and on the tinued or all the high mountains; the air likewise is more horrid-ious than might be expected in a country border-wat on the sea, as appears by the strength, robust health here longevity of the inhabitants. This advantage is at-the hred to the soil on the coasts, which being sandy and rocky, emit no such noxious vapours as those which constantly rise from mud and ouze.

The soil, as in other places, is different in different parts. Along the banks of the rivers, particularly the Tyne, there are large and rich meadows, and the land on the sea coast, where it is well cultivated, yields great plenty of wheat and other grain.

This county, particularly the western parts, are rough and mountainous, but yield grass for the feeding of sheep. On the tops of some of these mountains, especially on those in North Kindale and Readsdaie, there are bogs, which it is dangerous for horsemen to ride over, yet the inhabitants have the art of bringing up their horses to cross them without danger, on which account they are usually called Bog-trotters.

The rivers here afford great plenty of fish, particularly trout and salmon. The Tweed in particular is so remarkable for the salmon fishery, that they frequently take great numbers at one draught, and they are so cheap, that a large salmon may be frequently purchased for a shilling, which is of great advantage to the poor house-keepers. However, this extraordinary plenty makes them so cloyed with this fine fish, that the servants when they are hired, usually bargain that they shall not be obliged to eat of it more than on certain days in the week. The lords of the manors bordering on the above rivers, have the property of the fishery, which they farm out to fishermen, who dry the greatest part of the salmon they catch, pickle a considerable quantity, and export both the dried and pickled beyond sea.

The coal-pits in this county are extremely famous. It is called sea-coal, from its being brought by sea to most of the maritime parts of Great Britain, as well as to France, Flanders, and other countries: the trade of this county, in coals, is therefore exceeding great, London alone consuming upwards of eight hundred thousand chaldrons in one year; but as this coal is dug from pits, it is as properly pit-coal as any other. Here are also mines of lead and copper, and the mountains produce great plenty of timber.

As the heathy and mountainous parts, as we have before observed, afford good pasture for the sheep; the shepherds live in small huts called Sheals, or Shealings, and keep their flocks abroad almost all the summer. These mountains were formerly of great advantage to England, by defending that part of the country from the invasions of the Scots, and they now shelter the more fruitful part of the country from the north and west winds:

REMARKS on the HUSBANDRY of this County.

The soil, about Gosford, about a mile from Newcastle, is partly loamy, partly sandy, and some clay; the rent, upon an average, is about twenty shillings an acre, and the farms from fifty to four hundred pounds a year.

Their courses of crops are various, but generally

1. Fallow,
2. Wheat,
3. Oats or Beans.

For wheat they plough five times, sow two bushels at Michaelmas, and reap, upon an average, ten or twelve thrave, each thrave two stooks, or six pecks, that is sixteen bushels and an half. For barley they plough on stubble three times, after turneps twice, and on a fallow five times; sow two bushels and an half in April, and reap fifteen thraves, at two bushels, or thirty bushels. For oats they give but one ploughing, sow two bolls and a canning, or four bushels and an half, after barley; and gain in product much the same quantity

as of that grain. They plough but once for beans, sow them broad-cast, and under furrow in February; never hoe; the medium crop about twenty-five bushels. They are all sold for the colliery horses. For pease, but one earh, sow in March, and get from sixteen to twenty bushels. For rye they fallow three or four times; but after barley plough but once; sow two bushels, and gain in return thirty. For turneps they stir four times; hoeing is but coming in, for many do not practice it at all. The medium value per acre is, for the hoed ones, four pound four shillings, the unhoed, three pounds; an argument so strong for hoeing, that one would imagine it sufficient to convince the blindest and most prejudiced of the cultivating tribe. They use them for both sheep and beasts.

They sow a little rape on new land; paring and burning, and one ploughing, is the preparation; never feed it: the average crop of seed half a last.

No clover used.

They cultivate a few tares for the feeding horses. Likewise a little buckwheat, but it is not reckoned profitable.

Potatoes they plant after two or three ploughings: slice them into sets. Twelve bushels will plant an acre, at one foot square. They hand-hoe them twice, and hand-weed them occasionally. The crops are usually worth, from seven pounds to ten, at nine-pence a bushel. Wheat or rye succeeds; of which they have finer crops than common.

As to manuring, that of paring and burning is one important point; the expence,

	s.	d.
The paring	9	6
Burning	2	6
	12	0

They never fold their sheep, nor chop their stubbles; but their hay they stack at home. Dung they buy at Newcastle, from one shilling to two shillings, for a two-horse cart load.

Good grass will let for thirty shillings an acre. They apply it both to dairying and fattening: three acres will keep two cows through the summer, and one acre three or four sheep. They manure it carefully. The breed of cattle short horned, which they prefer.

The product of a cow they reckon at five pounds; a good one will give five gallons of milk per day. They keep but few swine, and not the more for their cows. The winter food of the latter hay and straw, of the first two ton; keep them in the house. Their calves suck five weeks for fattening, and six for rearing, and afterwards are fed with bean meal and milk. They reckon six or eight cows the proper number for a dairy-maid to manage.

Their swine they fat to twenty-four stone.

Their flocks of sheep rise from forty to eighty. The profit they reckon at fifteen shillings a head. They feed them in winter and spring on grass; some, turneps; and when pinched for feed, turn them into their wheat and rye. Five pounds weight the average of fleeces.

They reckon eight horses necessary for the cultivation of one hundred acres of arable land, use three in a plough, and do an acre a day. When at work in winter they allow their horses a peck of oats per day; and reckon the annual expence at seven pounds. They plough up their stubbles for a fallow at Christmas. The price per acre of ploughing, five shillings. The depth five inches. They know nothing of chopping straw for chaff. The hire of a cart and three horses a day is five shillings.

In the hiring and stocking of farms, they reckon three hundred pounds requisite for one of one hundred pounds a year.

Land sells at twenty-eight or thirty years purchase: there are some estates so low as two or three hundred pounds a year.

About Morpeth the soil is a loamy clay; lets from five shillings to twenty, per acre; average about twelve shillings.

N O R T H U M B E R L A N D.

shillings. Farms rise from thirty pounds to five hundred a year. Their courses,

1. Fallow,
2. Wheat,
3. Oats,
4. Oats.

And

1. Fallow,
2. Wheat,
3. Beans,
4. Oats.

Also

1. Turneps,
2. Barley,
3. Oats,
4. Oats.

For wheat they plough four times, sow two bushels and an half between Michaelmas and Martinmas, and reap, upon an average, fourteen. For barley they give three stirrings, but five on a fallow, sow two bushels about the end of March, or beginning of April, and gain in return twenty bushels. They stir but once for oats, sow five bushels before barley sowing, and gain thirty in return. One ploughing is also the number for beans; of which they sow three bushels broad cast, never hoe, the medium crop twenty-eight: use them chiefly for horses. For pease they likewise plough but once, sow two bushels, and gain about fourteen. They give four stirrings for rye, sow two bushels, and gain, upon a medium, twenty.

For turneps they plough four times, all hoe twice or thrice; and the medium value *per acre* is three pounds; use them for cattle and sheep. Clover they sow with both barley and wheat; mow it for hay, and get from one and a half to two ton *per acre*, and sow oats after it. Potatoes they prepare for by digging. The planters give five pounds *per acre* rent for the land they set them on. It is generally a stubble, dunged at the rate of twenty-five loads *per acre*, thirty-two bushels each. They dibble them in at one foot square; twenty-three bushels plant an acre; hand-hoe them three times, at the expence of two shillings and six-pence a time. The crop is from two hundred and fifty to four hundred bushels. The digging the ground, and digging up the crop, costs five pounds. The price commonly one shilling a bushel.

As to the management of manure, it may partly be judged from their stacking their hay both in the field and farm yard, and from their never chopping their stubbles.

Paring and burning was once used, but it is now done with.

They lime much, lay seventy bushels *per acre*, besides a dunging at the same time; it costs seven shillings, besides the lading; they reckon they could not raise corn without it.

Very good grass land will lett at twenty shillings an acre. They apply it mostly to fattening. An acre and a half they reckon sufficient for carrying a beast of one hundred stone through the summer, or to maintain seven or eight sheep. Their breed of cattle is the short horned, which they reckon much the best.

The product of a cow they lay at five pounds; but on land of twenty shillings an acre, they suppose it may amount to nine or ten pounds. A good one will give nine gallons of milk *per day*. Ten will maintain five or six swine. Their winter food is hay and straw. The calves do not suck at all, being brought up by hand, about six weeks, for either killing or rearing. A dairy-maid, they reckon, can take care of six cows; and a ton and a half of hay is the quantity they allow for wintering one cow. The joist, through the year, three pounds ten shillings. They are kept in winter in the house.

Their swine they fat up to twenty and thirty stone.

The profit on fattening an ox in grass, of one hundred stone, they reckon, at a medium, five pounds.

Their flocks of sheep rise from thirty to one hundred;

the profit on them they reckon at ten shillings. In winter they keep them in grass; and in winter weather give them hay; in April they turn them their young clover. The average of their fleece is three pounds weight.

In the tillage of their farms, they reckon that three horses are necessary for the culture of one hundred acre of arable land. They use either three horses in a plough or two horses and two oxen; with the first, they do an acre and a half a day, and with the second, not above half an acre; but then the last is the strongest of all their work. Their allowance of oats to their teams, is two bushels *per horse, per week*. The annual expence of keeping a horse, they reckon eight pounds. They feed their working oxen on straw and hay, in winter, and work on straw alone. The common time for breaking up stubbles for a fallow, is March, but some do it in November. The price of ploughing is five shillings and six-pence. The depth four or five inches. The hire of a cart, three horses and driver, three shillings and six-pence.

In the hiring and stocking farms, they reckon four hundred and fifty pounds necessary for one of one hundred a year.

Land sells at thirty-two years purchase. Estates rise from one hundred pounds upwards.

From Morpeth to Alnwick, land lets at an average at twelve shillings, and farms are in general from forty to two hundred pounds a year. Wheat crops twenty bushels, barley thirty, and oats thirty-six. The soil about Alnwick is in general either a light loam, or a gravel, and lets about fifteen shillings an acre. Farms from one hundred pounds to eight hundred a year. The courses most in use are,

1. Turneps,
2. Barley,
3. Oats,
4. Oats.

And,

1. Fallow,
2. Wheat,
3. Beans or pease,
4. Oats,
5. Oats.

which are both bad, but the last execrable. They plough for wheat three or four times, sow two bushels in October, and reap, on an average, twenty bushels. For barley they stir twice or thrice, sow two bushels in April, and gain, at a medium, forty bushels. They plough but once for oats, sow six bushels, after barley, and reckon the middling crop at forty. For beans but once; on pared and burnt land sow five bushels, and get from forty to fifty. They sow but few pease; the method is, one ploughing, sow three bushels, and the crop twenty. For rye they plough three or four times, sow two bushels; the crop the same as of pease. They plough as often for turneps, hoe twice, and reckon the value *per acre* from two pounds ten shillings to five pounds ten shillings. They feed them off with beasts and sheep. They use no clover, but sow a few tares to make into hay for their horses. They cultivate potatoes both by digging, ploughing, and dunging; if the latter, it is three times. They slice and drop them into the furrow, so as to stand in rows twelve inches asunder; thirty-five pecks will plant an acre; the crop is generally worth ten or twelve pounds, at one shilling and six-pence a bushel.

For raising manure, they have no idea of chopping the stubbles, but stack their hay at home, consequently make much more than in places where it is stacked in fields. They lime a great deal, lay eight or twelve bolls on an acre, at two bushels each.

Good grass lets at two pounds an acre; they use it chiefly for cows; an acre will summer one, or three sheep. Their breed of cattle is the short horned, and will fat up to sixty or eighty stone.

Their swine fat from twelve to twenty stone.

The product of a cow they reckon at seven pounds, in good grass; do not keep above a sow to ten. The winter

N O R T H U M B E R L A N D.

kettles, bottom. an earthenware, the Chr. God, hay, one acre and a half in quantity, and mas-day, pt in house. Calves do not suck above three to a grass. continued the tillage of their lands, they reckon four horses horrid for one hundred acres of arable land; use two in water, and do an acre and half a day; allow them here of a peck of oats a day, and reckon the annual expence the keeping, &c. at eight pounds per head. The time of breaking up their stubbles for a fallow, is after barley sowing. The price of ploughing, three shillings per acre, and the depth four inches. The hire of a cart, three horses and driver, five shillings a day.

They reckon three hundred pounds necessary for the hiring and stocking a farm of one hundred pounds a year.

From Alnwick to Belford land lets at twelve shillings an acre; and farms rise from forty pounds to seven hundred a year, but generally between one hundred pounds to two hundred. The wheat crops, at an average, twenty bushels per acre, barley thirty-six, and oats the same.

About Belford there are many variations from the preceding management, which highly deserve attention. The soil is in general a loam, inclinable to a clay; good wheat land lets, in large farms, at eleven shillings an acre, but in small ones, near the town, at twenty shillings. Farms rise from one hundred pounds a year, to five hundred, many of three hundred, three hundred and fifty, and four hundred pounds. The courses,

1. Fallow,
2. Wheat,
3. Pease.

Also,

1. Turneps,
2. Barley,
3. Oats,
4. Barley.

For wheat they plough four or five times, sow three bushels in November, and gain, upon an average, about twenty-one. For barley they plough three times, but only twice after turneps, sow four bushels, about the twentieth of May, and reckon the medium produce at five quarters. They stir but once for oats, sow six bushels, before barley seed time, and gain in return forty-eight. For beans they plough twice, sow six bushels, broad cast, the beginning of March, never hoe, but get sixty bushels in return; sell them for exportation. They give but one stirring for pease, sow four bushels the beginning of March, and gain from none at all to fifty bushels.

For turneps they plough four times, hoe twice, setting them out ten inches or a foot asunder, and value them, at a medium, at forty-five shillings, use them for fattening sheep and beasts, and rearing calves and young sheep. Tares they sow after wheat, on two ploughings, generally for hay, of which they get about two tons per acre.

Potatoes they plough for thrice: slice them for sets, drop them in the furrows, so as to lay fourteen inches square; hand-hoe them twice with an hoe seven inches wide; six bushels plant an acre: some years they do not get above twenty-four bushels, but in others sixty. They sow barley after them.

In the management of the manure in the farm-yard they have merit, for they stack all their hay at home; and keep their cattle in houses, littered down clean. But they know nothing of chopping the stubbles for littering a farm-yard. Nor do they fold their sheep, although their flock rise to one thousand. Paring and burning is known, but is going out.

Good grass land will let at twenty-shillings an acre. They apply it to all uses: an acre will keep a cow through the summer, or five sheep; but they never manure it.

Their breed of cattle is the short horned, but apprehend the long to be the best, and are accordingly getting into them. They fat their oxen up to one hundred and fifty stone weight, and reckon four-pounds, four shillings, the profit on one of eighty stone. Their swine to twenty-five.

Four pounds they reckon the produce of a cow, and a good one to give six gallons of milk a day: a dairy of eight, will enable the farmer to keep nine or ten swine. They give them hay in winter while milked, and straw when dry; keep them in the house, and allow each a ton and a half of hay. The calves do not suck at all, but are brought up by hand; four months for rearing; and two for killing. One maid will, with help, take care of ten cows.

Their flocks of sheep rise from one hundred to six; and the profit they reckon on buying to fat as follows:

	l.	s.	d.
Lamb, - - - - -	0	8	0
Wool, - - - - -	0	2	0
Improvement of ewe, - - - - -	0	4	0
	0	14	0

On stock sheep they calculate it,

Lamb, - - - - -	0	6	0
Wool, - - - - -	0	1	8
	0	7	8

In very hard weather they give them some hay, but their general winter keeping is on the sheep walks. The fleeces are from three pound weight to five pound, the first at five-pence half-penny, and the second at nine-pence half-penny.

In the tillage of their lands, they reckon eight oxen and six horses necessary for one hundred acres of arable land; they use either two oxen and two horses in a plough, or two horses alone; with the first they do half an acre a day, and with the last an acre and a half; but then the first is used in the strong work, and goes much the deeper. They allow their horses the third of a bushel of oats each in winter per week, but none in summer; and reckon the annual expence per horse to be five pounds, seven shillings. They give them no hay, only pea straw. Their draught oxen they feed in winter on straw and coarse hay, but work them on the first alone. They reckon oxen much the best on strong lands, ploughing much steadier and deeper. They break up their stubbles for a fallow in autumn. The price of ploughing is six shillings per acre, and the depth five to seven inches. They know nothing of chopping straw for chaff.

The hire of a cart, three horses, and a driver per day, is five shillings.

They reckon, that a man should have twelve hundred pounds, for the stocking a farm of three hundred pounds a year.

Land sells in general at thirty years purchase.

At Waren, near Belford, have been some improvements of moor land, which deserve mention. The soil is a black, rotten, boggy, peat earth, lets at one shilling and six-pence an acre. They plough it up in October, and let it lie all the succeeding summer without touching, and likewise the winter, when they lime it: of this manure they reckon too much cannot be laid on; generally ten or twelve fother, at twenty-four bushels each, which costs three shillings and six-pence a fother, besides lading, which is six-pence. Some few from twenty to thirty. After this liming they cross-plough it, and harrow it three or four times; then sow turneps, which, if well sown, want, according to their notions, no hoeing. They are worth, upon a medium, about fifty shillings per acre. After these turneps they plough once and sow oats, four bushels to the acre, and gain a crop of about twenty-eight or thirty. This crop is succeeded by a second of oats, managed as before, and the produce much the same: after this comes a third, as before; but it seldom yields above twenty bushels per acre. After this, they fallow and lime it, and sow turneps, which are not worth above twenty-five shillings an acre. Next comes oats, of which they do not get above sixteen bushels; they sow some ray grass, and a few other feeds, which may make the field worth five or six shillings an acre, for five or six years: they use it

for cows and sheep. A worse system cannot well be conceived.

At Hetton, a few miles west of Belford; the husbandry varies much. The soils are light loams, and rotten, black, moory land; let from one shilling and six-pence to fifteen shillings an acre; average, about six shillings and six-pence. Farms rise from one hundred to seven hundred pounds a year, but are, in general, from two to three hundred pounds. Their courses are,

1. Turneps
2. Barley
3. Clover
4. Oats.

And,

1. Fallow
2. Wheat
3. Pease
4. Wheat.

They plough six times for wheat, sow two bushels in October, and do not reap, in return, above ten, upon an average. For barley, they plough once or twice, sow three bushels in April, and gain, in return, about twenty-four. For oats, but one ploughing, sow six bushels before barley, and reckon the medium crop at thirty. For beans, (of which they sow but few,) they plough but once, sow three bushels and a half broad cast, never hoe them, and gain about eighteen; use them for horses. For pease, also, one ploughing, sow four bushels, and gain fifteen. They give four earths for turneps, hoe them twice; the medium value *per* acre, fifty-five shillings, they use them for sheep only.

Clover they sow with barley; both mow and feed it: if the former, they get about a ton and half *per* acre.

As to the management of their manure, they stack their hay in general in the farm yard, except what is used for sheep; but know nothing of chopping stubbles for littering the farm yards. They lime a great deal; lay six cart loads on an acre, or one hundred and twenty bushels, which costs three shillings and nine-pence *per* load, besides the lading. In the burning of lime, one load of coal burns two of lime.—They never fold their sheep.

Good grass land lets at twenty shillings an acre. They use it chiefly for fattening beasts, one acre and a half will fat one of seventy or eighty stone; and an acre feed four sheep. They very seldom manure it.

Their breed of cattle is the short horned, both for fattening and milking. The product of a cow they reckon at four pounds four shillings, a good one will give five gallons of milk *per* day: they feed them in winter upon both hay and straw; of the first of which a cow eats from one and a half to two tons, and always feed in a house. Of swine they generally keep one to two cows. Their calves do not suck at all, but are brought up by hand; three months for rearing, and six weeks for the butcher. A dairy maid will take care of twelve cows. The summer joist is thirty-five shillings, and the winter's the same.

The profit of fattening an ox of seventy stone they reckon fifty shillings.

Swine they fat from ten to twenty-four stone.

Their flocks of sheep rise from three hundred to two thousand, and they reckon the profit of all sorts, one with another, at five shillings *per* sheep *per* annum. They keep them in winter and spring upon their sheep walks and turneps; of the latter they keep some to the end of April. The average weight of fleeces, seven pounds, and value seven pence *per* pound.

They constantly save all sheep in October, with tar and butter; two gallons of tar and a firkin of butter, melted together, will do one hundred and twenty. They reckon this method keeps them free from the scab, warm in the bad weather, and also makes the wool grow.

In their tillage they reckon twenty horses and as many oxen necessary for the management of five hundred acres of arable land; they use in a plough two horses and two oxen, but in some lands only two horses, which do an acre a day in summer, but only three roods in winter: they allow their horses two bushels of oats a

week *per* horse, and reckon the annual expence *per* horse at six pound six shillings. The winter food of their oxen is straw and some coarse hay; and they calculate the whole annual expence at less than fifty shillings; but horses are the best, though not in proportion to the expence. The time of breaking up the stubbles for a fallow is the beginning of March; and the price *per* acre of ploughing, five shillings. They cut from five inches deep to ten in light loams. They know nothing of cutting straw into chaff. The hire of a cart and three horses is 7 s. a day.

In the hiring and stocking farms they reckon for the taking one of five hundred pounds a year, that from one thousand five hundred pounds to two thousand is necessary.

Their moor husbandry is as follows: they plough it up in October, four inches deep, and let it so remain till the October following, then they plough it again; and summer fallow the land, and lime it, the quantity before-mentioned, and sow turneps; the crop of which are worth, upon an average, about fifty shillings to three pounds an acre upon dry land. After these they sow oats, and get about forty bushels *per* acre; and with them sow down with ray grass, three bushels *per* acre; after which the land would let for four shillings and six-pence *per* acre, and will last seven years. After this they break it up again, and take two crops of oats and turneps; but not near so good as at first; then they lay it down again. This process is upon dry soils; if they are wet, they do not think them worth meddling with.

About Fenton, near Woller, the soil in the vales is a sandy loam of two feet depth, but upon the higher lands it is not more than from three to six inches deep. Lets from two shillings and sixpence, to twelve shillings, and some to twenty shillings an acre.

Farms from one hundred pounds to two thousand a year.

Their courses are,

1. Turneps;
2. Barley,
3. Oats,
4. Pease,
5. Wheat,

Also

1. Fallow,
2. Rye,
3. Oats,
4. Oats.

And

1. Turneps,
2. Barley,
3. Pease,
4. Wheat,

This is a very good course.

They stir for wheat three or four times; sow three bushels in October, and reap, upon an average, three quarters. For barley they plough once; sow three bushels and a half about the middle of April; and reckon the mean produce at three quarters and a half.

For oats they plough but once, sow six bushels before barley, and gain, in return, from four to six quarters. Beans and pease they mix, and sow of them four bushels on one ploughing, broad cast; never hoe them; the crop about twenty-five bushels. For pease they give but one ploughing, sow three bushels and a half, and get twenty in return. For rye, after turneps, they plough but once, after a fallow three or four times, sow two bushels, and get thirty. They stir for turneps three or four times, hoe once, in common, and sometimes twice; the average value *per* acre, fifty shillings. They use them chiefly for feeding sheep.

Clover they sow with barley, and mow it for hay, of which they get about two tons *per* acre; and sow oats after.

In the management of their manure in the farm-yard, they have only such as they make from feeding their hay and straw, as they stack the former not in the fields, but in the farm yards. They know nothing of chopping stubbles. Of lime they lay from three to eight loads,

thirty bushels each; it costs four shillings a load, besides the lading. They never fold their sheep.

Good grass land lets at twenty shillings an acre; they apply it chiefly to breeding. An acre and a half will feed a cow, and one acre keep four sheep. They never manure it. The breed of their cattle is the short horned, which they prefer to any other; their oxen are very large, fat to one hundred and fifty stone. They reckon the product of a cow at three pounds. They give about four gallons of milk *per* day. They keep about two pigs to a cow. The winter food of their cows, straw and hay; of the latter of which they generally eat about two tons each. The winter joist is twenty-five shillings, and the summer, thirty. They do not let their calves suck at all, but feed them by hand, from three to five weeks, for the butcher, but half a year for rearing. They keep their cows all winter in the house.

Their flocks of sheep rise from five hundred to ten thousand; and the profit of them they calculate at eight shillings in the vales, and three shillings upon the hills. The winter and spring food are the commons; but they give some hay in very stormy weather. The weight of the fleeces, from three pounds to seven, in the vales, and from two to four on the hills, and from six-pence to nine-pence price.

Very large flocks of ewes are milked after the lambs are weaned, from six to ten weeks. They make the milk into butter and cheese, the amount of both which may come to about two shillings a head. The butter is all used in salving them; the cheese sells so high as four-pence a pound. The hinds wives milk them. This is but a paltry affair.

In their tillage they reckon twenty horses and sixteen oxen necessary for the management of five hundred acres of arable land; their draught two horses and two oxen, which does an acre a day. Their allowance of oats *per* day is half a peck, and they reckon the annual expence of a horse at five pounds. The summer joist of a horse is twenty-five shillings. The winter food of the draught oxen, straw and hay, but never work on straw alone. They prefer horses so much that oxen are going out of use by degrees. The time of breaking up their stubbles is at Candlemas; from four to seven inches deep; the price of ploughing from three shillings and six-pence to five shillings. And that of a cart, three horses, and driver, four shillings.

They know nothing of cutting straw into chaff.

They calculate, that a man who hires a farm of five hundred pounds a year, should have from two to three thousand pounds.

Between Wooler and Rothbury, and also between Alnwick and Rothbury, are vast tracks of mountainous moors: indeed all the latter fifteen miles are absolutely uncultivated, except half a mile of inclosed valley about half way. The ling in vast tracks, high, thick, and luxuriant, and the soil a fine light loam. In some places black, but every where deep. I do not conceive that there is an acre of it, but what might be made, at a small expence, worth eight or ten shillings for ever. What a field for improvement! what a noble source of riches and population! how much is it to be regretted that such extensive tracks of land should remain in such a desolate condition, whilst the products of the earth sell at a beneficial price; and while we hear such clamours among the people for want of a greater plenty of food.

About Rothbury the soil is both gravel, clay, sand, and moory; the inclosures let at twenty shillings an acre; the moors at one shilling, and afterwards at two shillings and sixpence, and more.

Farms rise from fifty pounds to one hundred and fifty a year.

The courses :

1. Fallow,
2. Wheat,
3. Barley,
4. Oats.

And,

1. Turneps fed off for
2. Wheat,
3. Barley,
4. Oats.

Also,

1. Turneps,
2. Barley,
3. Oats,
4. Oats,

For wheat after turneps they plough but twice; after fallow three or four times; sow two bushels an acre in October and November, and reap from sixteen to twenty. For barley they stir twice, sow three bushels the end of April, or the beginning of May, and reckon the average produce twenty-four bushels. They plough but once for oats, sow six bushels, before barley, and gain in return from forty to sixty. For pease they give but one ploughing, sow two bushels, before barley, and get, upon an average, about ten bushels. They stir three or four times for rye, sow two bushels, and reap twenty.

For turneps they plough thrice, hoe them twice, and reckon the mean value *per* acre at three pounds; use them for sheep and beasts. Potatoes they prepare for by both ploughing and digging; if the former, they stir three times, and manure the land well. They lay the slices in the furrows, and hand-hoe them as the weeds rise, once or twice. They get eighty bushels off an acre, and reckon the crop very profitable. Wheat or barley after them.

Their chief manure is liming; they lay five loads *per* acre, at twenty-four bushels *per* load, and generally on the fallow for turneps or wheat. Their hay they stack at home. Though improvers of moors, yet they know little of the paring and burning husbandry.

Good grass will let for a guinea an acre: They use it more for fattening beasts than for feeding cows. One acre of good grass will carry a cow through the summer, or four sheep. The breed of cattle is the short horns, of which they feed oxen from sixty to one hundred and twenty stone.

They reckon the product of a cow at four pounds, ten shillings, or five pounds, and expect two firkins and a half of butter from each upon an average. A good one will give six or seven gallons of milk *per* day. One kept by Mr. Whittam, when he lived near Rothbury, gave in common twenty-four gallons a-day. A fact I much doubted, until the person who gave me the intelligence called in two or three persons to vouch for the truth of it. They keep about two pigs to five or six cows. The winter food is hay and straw, of the former about half an acre. The calves never suck at all, but are brought up by hand; for the butcher three weeks, and for rearing three months.

Their flocks of sheep rise from forty without right of commonage, to four thousand with; and they reckon the profit at seven shillings a head; their common winter food is on the moors, but in deep snows they give them hay. Their fleeces run, from three to six pounds weight.

In their tillage they calculate four horses and four oxen necessary for the culture of one hundred acres of arable land. They use two horses and two oxen in a plough, sometimes only two horses, and do from half to three quarters of an acre a day. They allow their horses three gallons of oats *per* week; and reckon the annual expence *per* horse at six pounds: Their draught oxen they feed on straw and hay in the winter. Horses they expect will do more than oxen, but the latter are much the cheapest.

They break up their stubbles for a fallow in May. The price of ploughing is three shillings and six-pence an acre, and the depth five inches. The hire of a cart for carrying coals is five shillings a day, for working in the roads three shillings.

In the hiring and stocking of farms, they reckon that three hundred and fifty pounds is necessary to stock one of one hundred a year.

Tythes are generally compounded for in the total. Poor rates from one shilling to one shilling and tenpence in the pound. The employment of the women and children is chiefly spinning wool.

Price of LABOUR.

In harvest, 1 s. 6 d. and ale.
 In hay-time, 2 s. and ditto.
 In winter, 1 s.
 Mowing grass, 2 s. and 4 s. 6 d.
 Hoeing turneps, 6 s. and 4 s.
 Ditching, &c. 1 s. 2 d. a rood.
 Thrashing wheat, 2 $\frac{1}{2}$ d. a bushel.
 ——— Barley, 1 $\frac{1}{2}$ d.
 ——— Oats, 1 $\frac{1}{2}$ d.
 Headman's wages, 12 l.
 Next ditto, 8 l. or 9 l.
 Boy of ten or twelve years, 3 l.
 Dairy maids, 4 l.
 Other ditto, 3 l. 10 s.
 Women per day in harvest, 10 d. and 1 s.
 In hay time, 6 d.
 In winter, 6 d.

Of the MINES of Northumberland.

The principal mines of this county are those of lead and coal, which have always been sought after with the greatest avidity, and worked ever since the time of the Romans. They were even the objects of the commerce of the Britons before their arrival; for the tribute was paid to the Roman emperors, in several of the more useful metals, particularly lead, of which several pigs have been found in different parts, with the emperors names upon them; and Pliny assures us, that the mines were so rich, that by an imperial edict a certain quantity only was to be worked; the veins, in the language of the mine-men, appearing at the very day, whilst the mines of lead in their province of Spain were few and poor.

The iron mines were likewise as well known to the Romans as those of lead, as appears from an altar discovered at one of their walled towns, Condercum, or Benwell, inscribed to Jupiter Dolichegnus, the deity who presided over this metal; nor were they less acquainted with out-pit-coal. In digging up some of the foundations of their walled city, Magna, or Caervoraon, in the year 1762, coal-cinders, some very large, were turned up, glowed in the fire like other cinders, and were not to be known from them when taken out.

The principal lead-works in this county, are at Allen-Head, Coal-Clugh, Shilden, and Fallowfield.

The mines at Allen-Head have been worked for time immemorial. The method the miners use to work them, is by sinking a shaft till they come to a vein; they then make cross cuts, and with eager pursuit follow the several branches, or frings, as they term them. They formerly made use of a very different method, and which is still practised about a mile to the south-east from these, near Rokehope; within the liberties of the bishopric of Durham. This was by flooding, or hushing, as they phrase it; making a large basin, or reservoir of water, which being let out by a sluice or full stream, through a cut or opening from a descent, with an irresistible impetuosity sweeps away, on frequent repetitions, all the various substances which compose the roof of the mine, freestone, iron-stone, whinstone, lime-stone, spar, and tale; and, at length the ore itself, with gravel, sand, and other extraneous matter, in gentler currents.

Coal-Clugh-Mine is three miles to the south-west from Allen-Head, near the source of the rivulet of West-Allen; by a clugh, or boggy hollow, as the name imports, black and hideous to look upon. It is above a hundred fathom deep; and a subterraneous waggon-way, of a mile in length, leading to its ostium.

The lead mine at Shilden was very rich till of late years. It now furnishes employment for several hands, and has two subterranean engines to carry off the water.

Near Shilden there is a lead-mine now working, which is reputed rich, and was discovered by the meer

accident of a countryman's stumbling upon a piece of ore lying at the very day. There are besides this, other veins of ore in this neighbourhood, but not of consequence enough to be particularly mentioned.

At Fallowfield, the lead-mine was also exceedingly rich for many years, till it was drowned. It is called by the miners the Old Man, and its internal wealth is always spoken of by them with rapture. It was lately opened, and a fire-engine erected. It gives employment to about eighty men.

The lead-ore of Northumberland yields a moderate share of silver, is soft, ductile, and fuses kindly in the fire. We learn from the ingenious Dr. Woodward that there is a lead ore found in this county, and brought to Newcastle to be worked, which yields twenty or thirty ounces of silver per ton; and is by far the richest he knew of in England. The celebrated Mr. Boyle informs us, he has known it observed, that lead ore, which is poor in its own metal, affords more silver than others; and assures us that he had some lead-ore, which on trial yielded three parts in four of good lead, and yet in the cuppel scarce yielded an atom of silver.

The lead-mines at Allen-Head and Fallowfield furnish some lead ores, which for their curiosity and beauty deserve particular notice.

1. Tesselated lead-ore ponderous and rich, the tessellæ of a paralleloiped figure, and of a fine natural polish.

2. Globose, multangular lead-ore, with plain sides in the manner of crystalline spar, but not regular; called by the miners, diced ore.

3. Diced ore rising in several orders from a plate of the common ore.

4. Half lead-ore, and half crystalline spar, of a paralleloiped figure.

5. Tuberos, cavernose lead-ore, with many short arborescent columns of unequal lengths, some on a plane, and some of the sides of steep; glossy and sparkling. These five from Allen-Head.

6. Lead-ore of various colours, like those of the iris or rainbow, called by the miners, peacocks-tail ore, from its resembling the colours in the train of that beautiful bird, red, purple, blue, green and yellow; the last colour it receives from its own metal, blue and green from the copper; and the red and purple from the iron. This ore by being kept under cover, may be preserved in all its beauty; but if exposed to the air, it will by degrees lose all its admired tincts. It is broad-grained, fuses badly in the fire, and yields not so much lead as ore of the same texture of an uniform colour. The flores of the common ores in fusion frequently exhibit the same colours, and are preserved sometimes by the refiners as presents to the curious. They call them the skimmings of lead-ore, the colours of which are permanent and splended.

7. Snow-white arborescent lead-ore, like some of the sub-marine corallines.

8. A cylindric column of white lead-ore, tubulous, three inches long, and two inches in diameter, the surface thick set with arborescent shoots, of unequal lengths.

9. White lead-ore composed of several transparent tubes of unequal lengths, the longest two inches and a half, and bifid at the end, three inches over in the base, at the extremity two inches; a small cylindric column, an inch long, affixed by the ends on one side, making a cavernula or hollow underneath, towards the middle, the surface sparkling with pointed studs; the rest, towards the base, also glossy with ramose efflorescences.

10. A column of white lead ore, tubulous, compressed, and tapering, with a ramose shoot at the extremity, and a longitudinal furrow down the middle on one side; oblique transverse striæ on the other side; the surface glossy with short pointed shoots.

11. White lead ore, with a vein of blue lead ore running through it, very bright, with a concretion of the same at one end, angular and pointed, like crystalline sparks, the blue emulating the lapis lazuli in lustre.

These six, the party-coloured and white figured ores are from the mine at Fallowfield. The tubulous arborescent

rescent kinds have the appearance of stibacitious crystallizations. They are the easiest in fusion of all the lead ores.

The only iron work of any eminence in this county at present, is at Bebside, on the south side of the river Blyth, about four miles from the sea-port of that name. The ore is dug out of the hanging banks by the river, with great labour and pains, of various colours, and of various degrees of colour and hardness; some, till hardened by the air, being as soft as common clay. The heaviest and richest in metal is mostly of a liver colour, or a deep brown.

There was, some years ago, an iron-work at Lee-hall, on the edge of the river of North-Tyne, near Bellingham. The ore is plentiful in the strata of a romantic precipice, on the east side of the river; both the liver-coloured, crustaceous, and clay-kinds; the first ponderous and rich in metal, some of it of equal weight with malleable iron that has passed the fire.

The great Mr. Boyle observes, that about three tons of iron-stone in some iron-mines, will yield one ton of metal. And on the authority of Mathesius he informs us, that a small quantity of gold is frequently found in iron-ore.

There is some iron-stone and ore in this county of so peculiar a structure, figure or colour, as to claim particular attention.

1. A ponderous mass, seven inches long, and thirteen inches over, in the thickest part; grey, with fibrous septa of black tale, villose and nappy, like velvet. From the shore of North Tyne, below Cipehace-mill.

2. Of the shape and size of a carpenter's hand-plane, ponderous. From the shore of the brook below Simonburn castle.

3. Very much resembling a bonum magnum-plumb, with a short stem, or pedicle; one side smooth, the other tuberculose and granulated, irregularly, but very neat. From the shore of the brook at Simonburn.

4. Resembling half of a nectarine split in two, of a fine grain, a faint red, with a nucleus, covered with a thin film or skin, tinged with yellow. From the same shore.

5. Like the head of a small iron bolt, broken off, with an enamel of a copper-colour.

6. Of a digitated figure, an inch and three quarters long, two inches and a half over at the base, and two inches over at the extremity; composed of cups or crusts including one another.

7. Another, smaller, an inch and three quarters long. Both these have a thin film or enamel, of a yellow and brown colour, the extremities rounded, obliquely.

8. Another, somewhat curved, rounded and swelling in the middle by a thick arborescent cortex; the cap at the small end fallen off and preserved for view.

9. Another, an inch and a half in length, two inches and a quarter over at the base, and two inches at the extremity, the brims of the cups projecting for the figure of a screw, the ridges or eminences equidistant, with a cuticula somewhat rough, and where rubbed appears as if gilt by the golden pyrites or marcasite.

10. Another an inch and three quarters long, two inches over at the base, and an inch over at the extremity, the edges of the cup a little raised, and conspicuous under a thin film, exhibiting a slight view of its configuration and structure. These six from strata of iron-stone, on the north side of the brook at Simonburn, above the bridge.

The coal works in this county are numerous. The principal for export are those at Plesley, Hartley, Tyne-moor, Chirton, Long-Benton, Killingworth-moor, Newbiggen, Wylam, Byker, Walker.

These mines are of various depths. The deepest and of the greatest curiosity is that at

Walker, by the river Tyne. It is an hundred fathom. The seam of coal is eight feet, five inches and a half thick. There are two ventilators worked with a machine by the help of the fire engine; this machine is also applied to turn a wheel for raising coals, bringing up a corve of twenty pecks, an hundred fathom, in the

space of a minute, the horses moving in a walk. This mine is held by lease from the corporation of Newcastle.

The Long-Benton mines have been in high reputation for many years, but are now said to be going off. One of them is on the south side of the village. It is called the bason; and is in depth seventy-two fathom; the main seam of it is in thickness about seven feet. There is another on the west side of the village, called the Delight, and is in depth seventy-four fathom and one yard; the main seam of this is seven feet thick.

Killingworth-moor mine, called also New-Benton, was lately opened by the proprietors of those of Long-Benton. It is in depth seventy fathom; and the main seam near seven feet thick; the several strata of earths and minerals, observed in it for thirty-six fathom are as follow; first, clay; secondly, a brown gravel; thirdly, a soft, pale, blue stone; fourthly, a white post, or a very hard chalk-like stone; fifthly, a soft green stone; sixthly, a hard blue stone; seventhly, a white post mixed with whin; eighthly of metal, or black slaty stone, four feet; ninthly, coal eight inches thick; tenthly, metal six inches; and eleventhly, coal sixteen inches. This account was given by the miners on the spot.

Byker mine is seventy fathom and one yard in depth, the main seam is five feet ten inches thick; and within two feet of the root is a band of stone which reduces the coal-seam to five feet nine inches. It is called the high main coal seam. The chief strata of earths and minerals observed in this mine, are blue metal; white post, six fathom; a slaty stone, five yards; and next to the coal, an hard white stone post, ten fathom and one yard. Seams of coal of various thickness lie promiscuously between the strata, not workable. Near this there is another mine of the same quality, in which there is a dyke, called Thistle-pit-dyke, lying north-west and south-east, which is believed to keep a very true course: many small dykes branch from it, resembling the root of a tree, in different directions.

There are two sorts of vapour prejudicial to men concerned in the coal mines; one fulminating, and the other arsenical; the first volatile and active, makes the candles burn precipitately, taking fire and giving a violent explosion like gun-powder, destroying the men and ruining the works; the other, gross and foul, not suffering the candles to burn; but in an instant extinguishing them, and by its poisonous quality, suffocating the unhappy men. On the fourth of June, 1761, two overmen, father and son, their name Goblin, were both killed, by the first of these vapours, in one of the mines at Byker. In the same year, a young man was suffocated by the latter, on entering the mine at Newbiggen, but recovered by being laid on his belly, with his mouth in a fresh hole made in the earth, the usual method used on such occasions. Against this sort of vapour or damp, as it is called, a large iron lamp, full of coals, is kept continually burning in the mine; and to guard against both kinds, a free currency of air is circulated through all the works, entering one and coming up another.

Two expedients tried by the late ingenious Mr. Carlisle Spedding, of Whitehaven, for the safety of the workmen in coal mines, infested with the fulminating vapour; one is by framing the perpendicular shafts or pits with timber where it is suspected to be, and to place a tube of about two inches square, in a hollow behind it, elevated four yards above the ostium of the mine, to collect the damp air to one side of it, and to convey it out of its precincts; the other is by the use of steel and flints fixed in a small engine with a wheel, which gives a glimmering light to the miners; this sort of vapour will not take fire by sparks, though it will by flame. When it comes out of the top of the tube, it is as cold as frosty air, yet after it has been confined in a bladder even for the space of a month, it will take fire at a lighted candle, or any other flame, if gently pressed into it through the orifice of a pipe; and when the flame is withdrawn, will continue burning till it is totally spent.

In the grounds at Benwell, about a quarter of a mile north of the river Tyne, a coal mine took fire, by means of a workman's candle negligently placed, and continued burning during the space of thirty years, though at first so trifling, that half a crown was refused to a man, who offered for that small sum to extinguish it. It afterwards acquired such force and strength from the kindled sulphurs and bitumens, that it raged with fury, in various directions and depths; sometimes taking its course east and west, and at last to the north, into the grounds of Fenham, near a mile from its first appearance, committing great ravages in its way, only conspicuous by its flames and columns of smoke in the night. The eruptions at Fenham were in near twenty places. Flowers of sulphur, mixed with sal ammoniac, were found concreted on pieces of alum-stone, slate, and the neighbouring furz, of which an account was given to the Royal Society, by Dr. Hodgson, who could discover neither common salt or nitre in the soil or springs about it; the coal water being all vitrioline, and tinged red with galls, and other neighbouring fountains being destitute of mineral salts.

Some of the salt ejected by this bituminous volcano was upwards of six inches broad; and was, by Dr. Hodgson, proved by an experiment to be sal ammoniac. It differed greatly in colour, some of it being grey, and some snow-white, freed from the black fætor of the coal by the intense heat of the fire.

Fætitious sulphureous air collected from the solution of metals at the time of their effervescence, especially iron, two ounces of filings being mixed with two ounces of oil of vitriol, and eight ounces of common water, will exhibit the same phænomenon on trial after the same manner as the fulminating damp; and if the flame of a candle is suffered to enter the neck of the bladder, the inclosed air will take fire and go off with a great explosion, like a gun.

The mines round Newcastle were ordered to be fired, the nineteenth of king Charles I. 1643, by the marquis of Newcastle, general of the king's forces, then in the town, besieged by the Scots, whose general, Lesley, preserved them by surprizing the boats and vessels.

They had also a narrow escape from being fired by the Scots after their defection from the parliament, in 1648, under their leader, Monroe, who, on the news of a party of his countrymen rising against him under the conduct of the marquis of Argyle, spirited up by their ministers, ordered his troops homewards, the nearest way over the Tweed, in such haste, that they had almost left their plunder behind them.

Coals particularly curious for their hardness, colour, and figure, observed in the mines of this county are as follow:

1. A hard glossy coal, in large masses, preferable to all others for strength and duration. It is usually called splint, by the miners. From the mine, called the Delight of Long Benton. There is likewise some of this coal at the mine at Wylam.

2. Coal, with thick enamel of silver marcasite. From the mines at Plessey.

3. Coal glowing with all the colours of the rainbow in the most beautiful enamel, much exceeding those observed in lead ore, and more permanent if preserved with the same care, under a cover, dry, and from dust. From Chirton mine, and from one at Inghow, near Stamfordham. That from Inghow has the finest tincts, most splendid and rich, as if raised in parts, and in a kind of relief. Some of it has a high, natural polish, like a mirror. Some of the common coal in this mine is a glossy black, of a fine politure, and breaks into rhomboid, and paralleloiped figures.

4. The ampolites, or canal coals, very fine. From the mines at Long Benton, and Walker, but in no great plenty. That from Walker very much resembles the inflammable fossil, agates, or jet, of which, as we have before observed, snuff-boxes and other toys are frequently made.

The people employed in the coal-mines are prodigiously numerous, amounting to many thousands; the earnings of the men are from one shilling to four shil-

lings a day, and their firing. The coal waggon roads, from the pits to the water, are great works carried over all sorts of inequalities of ground, so far as the distance of nine or ten miles. The tracks of the wheels are marked with pieces of timber let into the road, for the wheels of the waggon to run on, by which means one horse is enabled to draw, and that with ease, fifty or sixty bushels of coals.

MANUFACTURES.

The principal manufactures of Northumberland are hardware and wrought iron.

MARKET TOWNS.

The market towns of this county are Alnewick, Beleford, Berwick, Elledon, Haltwessel, Hexham, Learmouth, Morpeth, Newcastle, Rothbury, and Woller.

We crossed the Tyne, which divides Northumberland from Durham, over the bridge at Newcastle, the principal town in this county. It derives its name from a castle built here by Robert Curthose, son to William the Conqueror, who to distinguish it from an old monastic castle situated in this place, called it Newcastle upon Tyne.

It is a town of great antiquity, and by some supposed to be a Roman villa. There are the remains of a military way leading to it from Chester-le-street, which was carried over the Tyne by a bridge of arches, where the present bridge stands. The Picots wall goes through the vicarage-garden, and St. Nicholas's church-yard. Part of a turret upon it is still visible by the gate of the royal Saxon villa of Pampeden; also a tower on an eminence in the same villa, called the Wall-Knowl, or Carpenters-Tower. No other Roman buildings have hitherto been discovered.

This town is situated on the northern bank of the Tyne, two hundred and seventy-six miles from London. It is encompassed with a strong stone wall, ditch, and rampier of earth; has seven gates, with many round towers, and square turrets, built at different times, and by different persons, some of them still retaining the names of their founders, the principal of which are the following:

White-Friar-tower is built on the extremity of an eminence, of a circular form, and well paved. The access to the top is by one hundred and forty stone steps, steep and difficult, called Break-neck-stairs. It affords one of the finest and most varied prospects about the town: It was built by the White-Friars, opposite to their monastery; and is now the hall of the company of masons.

Nevill-Tower was built by the Nevills, earls of Westmoreland. It is also called Denton-tower, and is now the hall of the masons, bricklayers, and plaiters.

West-Gate is a strong building of stone, and hewn work, with a port-cullice, iron gates, &c. at the west end of a spacious, well-built, and handsome street of the same name. It was built by Roger Thornton Esq; and is now the hall of the house-carpenters.

New-Gate is situated at the north end of a broad, well inhabited street of the same name. It exceeds all the other gates for strength, and is supposed to be the most antient. On the north side of it, in a nich, is a stone statue of king Charles II. crowned with a scepter in his hand; the nich is adorned with a pediment, entablature, and cartoons; below are the arms of England, and those of the corporation.

Two new wings have been added to this gate, on the south side, one in 1702, and the other in 1706. It has been for many years the town jail for debtors and felons.

Pilgrim-street-gate stands at the north end of a spacious, handsome, pleasant street of the same name; so called from the great resort and entertainment of pilgrims in it, in the monastic times, in their way to Gesner, whence there was a shrine dedicated to the Virgin Mary. It is a strong gate, flat roofed, and embattled;

embattled; has a port-cullice, iron-gates, &c. It is now the hall of the company of joiners.

Carliol-Tower derives its name from the antient family of the Carliols, eminent merchants of this town. A field near it also bears their name, called Carliol-croft, through which is a beautiful walk, presenting a prospect of many hanging gardens. This tower is now the hall of the company of weavers.

Pampeden-gate is at the foot of an antient village of the same name at the north-east part of the town. It has folding iron-gates, but no port cullice. Thence is an ascent to the top by a pair of stone-stairs two yards wide. It is supposed to be part of the Picts wall, and the remains of a Roman turret are still conspicuous.

Sand-gate receives its name from its situation by the stone of the river Tyne. It is arched at top, but has no tower or castellated building upon it. There were many openings or passages through the wall next the river, for the conveniency of trade. It was lately pulled down, and part of the quay railed with iron rails, which gives a fine view of the river.

The north part of the wall is thought to have been built ever since the reign of king John. That part of it which extends from Sand-gate to Pampeden-gate, and from thence to the Austin-Friars, is said to have been built in the reign of king Edward I. King Edward III. granted the corporation the duties and customs of the town for seven years, to complete the whole, which being neglected, he seized their franchises, and would not restore them till they agreed to do it at their own charge. It was always the object of attention of future kings, and in the reign of king Henry VIII. it is recorded to have exceeded, both for the strength and magnificence of the masonry, all the walls of the cities of England, and most of the towns in Europe.

King Henry II. granted this town by charter, great franchises and liberties, which were confirmed by his son king John, on the payment of a hundred marks and two palfreys. He afterwards enlarged them by a charter, on the annual payment of one hundred pounds in two equal portions, at Easter and Michaelmas, reserving to himself the rents, prizes, assizes, and leases in it. In consideration of the losses sustained by the inhabitants on taking down their houses in order to make a ditch under the castle next the river, he granted them an annual rent of one hundred pounds ten shillings and six-pence, to be paid by him and his heirs, in proportion to their several damages. He also granted it for its loyalty and faithful services, exemption from the power of the sheriff and constables in affairs relating to themselves; and that no burgeses should be arrested out of it for any debt, unless he was the capital debtor.

King Henry III. by his charter made it a mayor town, being governed by four bailiffs, and added a grant, during pleasure, of all the demesne-lands belonging to the castle, called the Castle Field, containing eight hundred and fifty acres, for free pasture, with liberty to dig coals and stones, and to dispose of them for their use, upon payment of twenty shillings into the Exchequer. He also gave them a field called the Forth, adjoining to the other, for the same uses, and for which they were to pay forty shillings into the Exchequer. It was likewise provided by his charter, that no Jew should reside among them.

King Edward I. directed a writ of summons to Newcastle in the tenth year of his reign 1282, to send two members to parliament; which is the earliest upon record for boroughs to send any, or for the commons to sit, except that summoned under Montfort's usurpation in the name of the king's father, Henry III. Edward annexed to it the villa of Pampeden.

By antient custom, the real estates of the freemen were considered as chattels, and they disposed of them by will at their discretion as such, which right was confirmed to them by Edward I.

King Edward III. confirmed the franchises of Newcastle, and granted it the perpetuity of the moor and lands, called Castle-moor, and Castle-fields, to hold of him and his heirs, by the payment of forty

shillings annually into the Exchequer. He exempted it from the jurisdiction of the admiralty of England, gave leave for purchasing lands to a certain value, confirmed several bye-laws of the magistrates for well governing and improving it, and issued an order for the manner of electing the mayor, magistrates, and other officers; and another concerning the measure to be used by the vendors of coals.

King Richard II. confirmed its charters in the first year of his reign, and he afterwards granted some ground for the conveniency of making highways and a bridge, and allowed the mayor the honour of having a sword, which is an ensign of royal state and authority, carried before him.

King Henry IV. on his accession to the throne, granted that it should be a town and county of itself, independent of the county of Northumberland; that it should have a sheriff instead of bailiffs, who should hold a court, account before the barons by their attorney, and have the return of all writs, &c. That it should have six aldermen, to be elected from among the burgeses, with power to act as justices of the peace within their jurisdiction; that it should have the royalties of the river Tyne, from Sparrow-hawk to Hedwin-streams, with a prohibition for any ships to load or unload any sort of goods in any part of the river within those limits, except at Newcastle.

Queen Elizabeth confirmed to the town of Newcastle the grants of her progenitors, and added new ones by her charter, bearing date the twenty-second of March, in the forty-second year of her reign.

It is at present governed by a mayor, nineteen aldermen, a recorder, a sheriff, a town clerk, a clerk of the chamber, two coroners, eight chamberlains, a sword-bearer who wears a cap of maintenance, a water-bailiff, who carries a large mace, and seven serjeants at mace.

Newcastle is eminent for its commerce, trade, and revenue. As early as the reign of Edward III. it was so powerful in shipping, that in his expedition against France, it sent him an aid of seventeen ships, and three hundred and fourteen men; and Edward for the encouragement of its trade, granted the merchants leave to carry their goods to any part of England toll or custom free. It is in the list of the trading towns to which Sir Thomas White, lord mayor of London, in the reign of queen Mary, gave one hundred pounds *per annum* for ever, to be lent to four merchant-clothiers for ten years without interest. It first received that bounty in the year 1599, and ever since in its turn.

The merchant adventurers have a governor, twelve assistants, and a secretary. They have a stately court to the east of the town chamber, built upon part of the antient hospital of St. Catharine. Noble and generous efforts have been lately made by the corporation to give life and vigour to the commercial arts. A bank has been established; and a fund raised for carrying on the herring and Greenland fisheries. But the chief trade of Newcastle is derived from the coal mines. The vast extent of it may be partly guessed at, from the one shilling *per chaldron* granted by the corporation to queen Elizabeth, in lieu of an arrear of two-pence *per chaldron*, since given to the duke of Richmond, which amounts to about fourteen thousand pounds *per annum*. The coal-fleets sometimes amount to five hundred sail. Their station is at Shields, and at the quays of Girwy or Yarrow, and Willington; the former on the south, and the latter on the north side of the Tyne. All that parcel of ground within the liberty of Willington, between high and low water wark, in length from east to west one thousand two hundred and forty-five yards, and in breadth one hundred and twenty, was granted by the corporation in 1665, to Sir Francis Anderson, on a lease for one thousand years, with leave to erect quays and cast ballast, on payment of two-pence *per ton*. Ships take in their lading of coals by the help of keels, and it was enacted in the reign of Henry V. that the keels should be of the burthen of twenty chaldrons, according to custom, and no more; some being of the burthen of twenty-two, and some of twenty-four chaldrons,

chaldrons, to defraud the king of his customs, and that they should be sealed by the king's officers. Small ships, laden with merchant goods, only come up to the quay at Newcastle. It is esteemed one of the best quays in England, being in length, from east to west, one hundred and three rods.

The revenue of the corporation of Newcastle, which they hold in their own right, is upwards of eight thousand pounds *per annum*. They have the royalties of the river Tyne from Sparrow-Hawk, by Tynemouth-Bar, to Hedwine streams, above the village of Newburn; a space of fourteen miles. The circumference of their boundaries is ten miles, and fifty yards. The revenue for coals, salt, grindstones, ballast, &c. are received by eight chamberlains. They also keep the town-securities; their office is in the exchange; they are generally decayed merchants, eminent for their integrity, and chosen annually. Twenty-four auditors, chosen out of the twelve companies, examine their accounts once a year; and conjunctly with the mayor and aldermen see that the overplus of their annual revenue is put into the town-stock, or, as it is usually stiled the hutch.

Here are eight parochial churches in Newcastle, viz. St. Nicholas, with Gosforth. St. Thomas's and Cramlington chapels. All Saints, with St Ann's chapel. St. Andrew's, and St. Johns.

St. Nicholas is a vicarage; the impropiator and patron, the bishop of Carlisle; given to the church and canons of St. Mary in that city, by king Henry I. together with the church of Newburn. The other churches are dependant on it, though three distinct parishes, and the vicar receives dues from them all. This church was founded in 1091. It stands in an advantageous elevated situation, almost in the center of the town. Its length is seventy-nine yards two feet and three quarters; its breadth twenty-four yards, two feet and three quarters, and of a proportionable height. Four stone-images, at full length, adorn each corner of a square tower; out of which rises a curious steeple; in height sixty-four yards, one foot, and three quarters; decorated with thirteen pinnacles; two bold stone-arches supporting a large and beautiful lantern, on which is a tall and stately spire. It has now eight musical bells, but formerly it had only five; the other three being added by the corporation, who had the old great bell, which weighed three thousand one hundred and twenty-nine pounds, new-cast at Colchester. The church is well illuminated. The east, or altar-window was anciently adorned with curious paintings in glass, of the twelve apostles, and the seven deeds of charity, done at the expence of Roger Thornton the elder.

In the organ-gallery is a double organ; and on the north-side of it is a porch called St. George's porch; which is vaulted underneath, and cieled above; and was formerly adorned with curious carvings in wood, and the windows with paintings in glass; some of the latter still remaining in the east-window, particularly the portraiture of St. Laurence. It is supposed to have been one of the ancient chanteries, and to have been built by one of our English monarchs.

Nine chanteries were founded in this church; in honour of St. John the Baptist, and St. John the Evangelist. St. Catharine, two. St. Peter and St. Paul. St. Thomas. The blessed Virgin. St. Margaret. St. Cuthbert. St. Lyra.

The chantery of St. John the Baptist and St. John the Evangelist stood on the north side of the church. Its original foundation was by Laurence, prior of Durham in the year 1149. It was re-founded, in the reign of Edward III. by Richard de Emeldon, for three chaplains. By an injunction of Richard bishop of Durham, in the third year of his consecration, 1335, they were obliged to distribute, after divine service, on the eve of the anniversary of his death, the sum of six shillings and eight-pence to one hundred and sixty poor people. It was founded again in the reign of Henry VI. by Robert de Rhodes and his wife Agnes, for one chaplain; the annual value, seven pounds, seven shillings and ten-pence, besides a house given by the corporation for the chaplain to live in.

One of the chanteries of St. Catharine was founded by Allan de Durham. It was re-founded in the reign of Edward III. by William Johnson and his wife Isabella, for one chaplain; the annual value six pounds fifteen shillings.

The other was founded by Nicholas and John Elliker; the annual value three pounds, fourteen shillings and eight-pence, arising out of some houses in the Castle-mote, in the Side, in the Close, and in Sand-gate.

The chantery of St. Peter and St. Paul was founded by Adam de Fenrother and Alan Hilton, in the reign of Henry IV. the annual value four pounds, thirteen shillings and four-pence, which arose out of some houses in Westgate, in the Side, and in the Close.

The chantery of St. Thomas was founded by John Thapecape, in the reign of Edward III. the annual value four pounds, twelve shillings and six-pence.

The chantery of the Blessed Virgin claims as high a foundation as the reign of Edward I. but how much earlier, and by whom, is unknown, the deed of foundation being lost. It stood on the south-side of the church, being a large porch; the annual value five pounds sixteen shillings.

The chantery of St. Margaret was founded by Stephen Whitgray and his wife Mary, in the reign of Rich. III. It stood on the south-side of the church, near the porch-door, of a square figure; the annual value ten marks; the chaplain to be chosen by the vicar, the mayor and bailiffs of the corporation, and four creditable parishioners of St. Nicholas, after the death of the founders.

The chantery of St. Cuthbert was founded by Thomas de Errington and William Redmarshal, in the reign of Richard II. the annual value seven pounds, three shillings and two-pence, raised out of some houses in the Side, the Sandhill and the Close.

The chantery of St. Lyra was founded by Robert Castell, in the reign of Edward III. the annual value four pounds ten shillings, which arose from certain tenements in the Close, in Westgate, and from a field without the West-gate, called the Goose-Green-close.

In the north isle of the church is a large gallery, designed principally for the boys of the grammar-school. The east end was enlarged by the late Dr. Thomlinson; for the accommodation of himself and his successors. The vestry is on the south side of the chancel, above which is the library; to which the same Dr. Thomlinson, at his death, gave a large and valuable collection of books. Twenty-five pounds *per annum*, for ever, has been settled on a librarian by Sir Walter Calverly Blacket, Bart. The corporation make the vicar an annual compliment of ninety pounds, and the first curate another of forty pounds; who also receives four pounds *per annum* from the vicar, and six pounds, sixteen shillings and eight-pence *per annum* from the crown, and the usual fees of the church. It was customary, till the year 1724, to have two parish clerks, when one of them dying, another curate was appointed, whose annual income arises out of the clerk's fees. The lecturer receives annually from the corporation one hundred pounds. Here are prayers twice a-day; a catechetical lecture in every week, when there are no holidays; and a sermon on every Wednesday and Friday in Advent and Lent.

There are many funeral monuments, both mural and others, in this and the other churches, and many benefactions left to the parish poor. The church-yard of St. Nicholas was inclosed by subscription, in 1761, with stone and wooden pales. The vicarage-house stands at the west end of St. John's church-yard in Westgate-street. The garden is remarkable for having had the Roman wall pass through the middle of it.

Gosforth chapel is at a small village, about a mile north from the town, on the east side of the great post road; nothing about it remarkable. It is supplied by the vicar.

The chapel of St. Thomas is at the north-east end of Tyne-bridge. It is commonly called, The Bridge-end Chapel, from its situation. For the keeping it and the bridge in repair, several rents were settled upon it. Two chantries were founded in it, in honour of St. Ann and the Virgin Mary.

St. Ann's was founded by William Heron, who endowed it with an annual rent of six marks, out of some tenements on the Sandhill; valued at the dissolution, at four pounds seventeen shillings.

St. Mary's was endowed with an annual rent of five marks, out of five messuages, in the Close and Side; but the founder is not known; valued at the dissolution at four pounds, three shillings and six-pence.

Another chantery was founded in honour of St. Mary, by George Carr, merchant of this city, but never licensed; valued at the dissolution at five pounds six shillings and eight-pence.

St. Mary Magdalen's has been annexed to this chapel, which consists of a master and three poor brethren, free burgesses of Newcastle; each brother allowed three pounds, six shillings and three-pence *per annum*. The curate, for reading prayers, and one sermon annually, four pounds, six shillings and eight-pence. The collector of the rents, about one pound, seventeen shillings and six-pence; the whole rental, twenty-nine pounds, seven shillings and eight-pence.

Cramlington chapel is six or seven miles north-east from Newcastle; but nothing about it is remarkable.

All-Saints church is at the foot of Pilgrim-street, on an eminence; its length is fifty-yards one foot, and its breadth twenty-five yards two feet. There is a low square tower at the west end, with one spire rising from it, adorned with a clock, and six good bells, cast out of the statue of king James II. standing formerly on the Sand-hill. In some of the windows were anciently several curious paintings on glass. In the south-east window, at the east end of the chancel, was one of our Saviour, at full length. In the window but one next the church door, were the twelve apostles; and in the window above the south door, was Sir Roper Thornton and his family; but most of these were defaced or taken away in the last civil wars. At the west end of the church is a handsome gallery, built in 1712, with an organ in the center: the north end is appropriated to the use of the charity-children. At the east end is another gallery for the butchers. There is also one for sailors in the north isle, built by the Trinity-house, 1618, John Holburne then master; beautified with paintings, 1720, representing our blessed Saviour asleep in the storm; his taking St. Peter by the hand when he was sinking in the waves; Jonah vomited up upon the dry land.

The chancel stands upon a large vault, of a square figure, the entrance to which is on the north side of the church-yard. There is a strong pillar in it, the support of eight large stone arches. The altar-table is of marble, the donation of a person unknown. On the south-side of it is a prothefes, or side-altar. The chancel is adorned with wainscot stalls, after the cathedral taste.

Seven chanteries were founded in this church in honour of St. Thomas, St. Mary the Blessed Virgin, St. John the Evangelist, St. Peter, St. John the Baptist, St. Catharine, St. Lyra.

St. Thomas's was founded by John Puthore; the annual value four pounds, eight shillings and four-pence.

The founder of St. Mary's is not known; the annual value four pounds, five shillings and ten-pence.

St. John the Evangelist's was founded by Richard Willisby and Richard Fishlake; the annual value four pounds, fifteen shillings and four-pence.

St. Peter's was founded by Roger de Thornton, the annual value six pounds. It was in the vacancy above the vestry, opposite to the founder's sepulchral monument.

St. Catharine's was founded by the same person; the annual value five pounds, three shillings and eight-pence.

St. Lyra's was founded in the reign of Edward III. by Richard Pickering; the annual value three pounds, eight shillings and four-pence.

St. Ann's chapel stands in the suburbs of Sandgate, on the slope of a hill. After the Reformation, it was neglected and fell into decay, but was repaired in 1682, and has been lately re-built by the corporation, after an elegant design.

In the same suburbs was anciently another chapel, dedicated to St. Laurence, and said to have been built

by one of the earls of Northumberland. It was dependent upon the priory of St. John of Jerusalem; but in the reign of Edward VI. it was granted among other things, to the corporation, for a consideration of one hundred and forty-four pounds, thirteen shillings and four-pence. It is now a bottle glass-house.

St. Andrew's church stands near New-gate, on the west side of the street. From the stile of the architecture, and its situation, where old Monk-chester chiefly stood, it claims priority to the rest for antiquity. In 1729, the old bells were taken down, and six new ones put in their place, by a contribution among the inhabitants, the corporation giving fifty pounds. A new porch was built at the same time. At the West end is a handsome gallery, erected in 1711, at the expence of the parish.

Three chanteries were founded in this church, in honour of the Virgin Mary; the Holy Trinity; and St. Thomas.

The founder of St. Mary's is not known; the annual revenue, six pounds, twelve shillings and ten-pence.

The Holy Trinity is said to have been founded by Sir Adam de Atholl; the annual value, four pounds, two shillings and ten-pence.

It is not known who was the founder of St. Thomas's; and the annual value is also uncertain.

St. John's church stands in Westgate-street. Some of its chief ornaments are the gifts of Mr. Robert Percival. He beautified the altar in 1710, and built at the same time the north gallery, for thirty-three persons; he subscribed towards taking down the three old bells, and putting up six new ones; and when he died, bequeathed a house, let at twenty pounds a year, to this parish.

The communion plate was the gift of Mr. Robert Rymer, in 1722; it consists of a large flaggon, a chalice, and a salver, valued at sixty pounds.

At the west end of the church is another gallery. It had an organ in 1570, but that being long since destroyed, a new one was lately erected at the expence of the inhabitants.

Three chanteries were founded in this church, in honour of St. Thomas the Martyr; the Virgin Mary, and the Holy Trinity.

St. Thomas's was founded in the reign of Edward II. by Adam de Durham; the annual value, four pounds, three shillings arising from some tenements in the Sand-hill, and in Westgate.

St. Mary's was founded in the reign of Edward III. by Edward Scot; the annual value, four pounds, four shillings and four-pence.

The Holy Trinity was founded by John Dalton, William Akinshawe, and Andrew Acliff; the annual value, five pounds, thirteen shillings and four-pence.

The church-yard was inclosed by subscription in 1762, with stone and wooden pales; and planted round in the inside, with young lime and elm trees. The church tower is adorned with a clock.

The principal schools established in Newcastle are a free grammar-school, and four parochial charity-schools.

The grammar-school was originally founded by Thomas Horsley, mayor of Newcastle, in 1525. He left to it his lands in the town for ever, after his own and his wife's death. It was re-founded by queen Elizabeth, as attested by her charter. The impropriated or great tithes of the parish of Bolham belong to it. The mastership of St. Mary's hospital was usually annexed to it by the corporation, who are the patrons. The masters have convenient apartments to live in the hospital, commonly called the West Spittle, from its situation in West-gate.

The charity-school belonging to the parish of St. Nicholas, was founded by Mrs. Eleanor Allen, a widow lady of Newcastle. By a deed of gift, bearing date February the twentieth, 1705, she assigned a farm-hold, and tenant-right, in the parish of Walls-End, held under the dean and chapter of Durham, of above the annual value of sixty pounds, for the education of forty boys, and twenty girls of this parish, and the chapelry of St. John. The school was opened in 1709.

Another

Another lady, widow of the Rev. Mr. Chisholm, vicar of Woller, at her death, gave 500*l.* to this noble and useful charity. By a parochial subscription, begun in 1718, they are annually clothed on the first of May. The boys are instructed in reading, writing, and accounts, and then put apprentice to some honest employment, each receiving a Bible and a Common Prayer book, the Whole Duty of Man, Lewis's Exposition of the Church Catechism, and two pounds. The girls are taught reading, sewing and knitting, and are put out to reputable services or trades. They are presented with the same books, and one pound. The school master is allowed twenty-five pounds *per annum*, and one pound for coals; the school-mistress, ten pounds *per annum*, and ten shillings for coals.

The charity-school belonging to the parish of All-Saints is supported by subscription, begun in 1709. It is conducted on the same plan as that of St. Nicholas, and receives forty-one boys, and seventeen girls.

The charity-school belonging to the parish of St. Andrew, was founded by Sir William Blacket, Bart. for thirty boys, and opened in January, 1708. The school-master is allowed twenty pounds, *per annum*; out of which he pays school-rent.

The charity-school belonging to the parish of St. John, was founded in 1705, by John Ord, Esq; for forty-four boys. He settled upon it a large field without Pilgrim-street-gate, called Magdalen-clofe, and held by lease of St. Mary Magdalen's hospital. Mrs. Margaret Allgood, a widow lady, in 1707, gave to this charity one hundred pounds. The children are clothed annually by subscription. The school-master is allowed twenty-four pounds, *per annum*; two pounds for teaching them to sing, and sixteen shillings, *per annum*, for pens, ink, and paper.

The public buildings of note in this town are, the castle, the bridge over the Tyne, the town-court, the Trinity-house, the state-house of the corporation, the freemen's hospital, the hospital for merchants widows, &c. barber-surgeon's hall, the hospital for poor maidens, &c. the keelmen's hospital, and the infirmary.

The castle belongs to the county of Northumberland. Several tenements and lands were held in the county for keeping it in repair. It stands on an eminence, and was anciently strong and stately. It is encompassed with two walls of great strength and height; in the exterior wall are four gates; one very large, with two port-culices. The principal entrance is to the south, and the ground within is three acres, and one rood. In the castle was a well of considerable depth; and a chapel of handsome Gothic architecture. The government of it was generally committed to the high sheriff of Northumberland. At the accession of James I. one third of it was almost taken away; the lead and covering embezzled and carried off; the square old tower almost demolished; and the malefactors confined in it in danger of perishing by the weather. The expence of repairing it was computed at eight hundred and nine pounds, fifteen shillings. The poor remains of it are decently kept, and serve for the county-jail, and for holding the annual assizes.

The bridge over the Tyne is of great antiquity. From the vestiges of a military way leading to it from Chester-le-street, it is believed to have been originally Roman. In the reign of Henry III. it was destroyed by fire, being then of wood. It was rebuilt of stone, by contribution. It had twelve bold arches, but has now only nine; the rest, on building the quay, being turned into callans, or stone-rooms. Several tradesmen have their houses and shops on each side of it. About the middle of it is an old tower, used by the magistrates for the confinement of disorderly persons and offenders; beyond it is a blue stone, the boundary between Newcastle and Gateshead; and at the other end is a tower, where there has been a draw-bridge. That part of it to the south of the blue stone, was recovered from the corporation in the reign of Henry V. by Thomas Langly, bishop of Durham; and was repaired by Thomas Ruinal, bishop of Durham, in the reign of Henry VIII.

The town-court is on the south side of the Sand-hill, on the banks of the Tyne. Its original foundation was

by Roger de Thornton; but was re-built by the corporation in 1658, after a noble plan. It cost upwards of ten thousand pounds; besides one thousand two hundred pounds, the donation of one of the magistrates. The statue of king James II. on horseback, placed in the area before it, cost one thousand seven hundred pounds. It was of copper, large as the life; the horse standing on his hind-feet, raised upon a pedestal of white marble, and encompassed with iron-rails. It was taken down in 1688.

The Trinity-house belonging to the mariners of Newcastle, is a monastic-like building, of a square figure. It has a neat chapel, and chambers for fourteen persons: each is allowed eight shillings a month, clothes, and coals. The hall in it, which is large and stately, was anciently called Dalton's Place. It was purchased by this society in the reign of Henry VII. of Ralph Hebburn, of Hebburn-tower, in Northumberland; and was confirmed to them by his son, Thomas Hebburn, paying to him and his heirs for ever the compliment of a bottle of wine annually, on the eve of St. Peter and St. Paul, if demanded. He was also to be made a member, to be intitled to their privileges, and to have the usual funeral honours at his death. The society keep this house in repair, at their own charge. It stands very convenient for seamen; near the key, the upper end of a well built street, called the Broad Chare.

The state-house of the corporation is on the edge of the Tyne, above the bridge, in a street called the Clofe. It is a handsome, modern building, with an area, or court before it, entered by a flight of steps; and within it is not only convenient, but elegant.

The freemen's hospital, commonly called, the town's hospital in the manors, is on the north side of a pleasant field. It was founded by the corporation in 1681, and dedicated to our Saviour. There is a master, and thirty-nine poor freemen, or their widows; the master is allowed one pound, ten shillings per quarter, and the rest one pound each. It stands upon piazzas. The entrance is in the center, with a handsome fountain before it.

The hospital for the relief of six widows of merchants and clergymen, stands at the foot of the same field, built by the corporation in 1725, and endowed by Mrs. Ann Davidson, the relict of Mr. Benjamin Davidson, merchant.

The hall belonging to the barber-surgeons is on the east side of the same field; and was re-built after a neat design in 1730. It stands upon tall piazzas, with a garden before it, adorned with the statues of Esculapius, Hippocrates, Galen, and Paracelsus.

The hospital for six poor maiden women, and six poor men, stands contiguous to barber-surgeons hall. It was built by the corporation in 1753, after receiving a donation of one thousand two hundred pounds from Thomas Davidson, of Ferry-hill, in the bishopric of Durham, Esq; and his two sisters; and the like sum from Sir Walter Calverley Blacket, Bart. for its endowment.

The keelmen's hospital is between the carpenters tower and Sand-gate. It was built in 1701, at their own charge, by contribution, paying, each man, one penny a tide. It is a large, square structure, containing upwards of fifty chambers; but is at present much neglected.

The infirmary is behind Westgate-street. It was built by subscription for the benefit of the town and county of Newcastle, and the two counties of Northumberland and Durham. It had a donation of one thousand pounds, in the year 1759, from Sir Walter Calverley Blacket, by whose appointment the annual interest of ten pounds is given to a clergyman to attend it. It is a large handsome building, and stands in a pleasant, airy situation, in a field called the Forth; said to have been given to the corporation by king Edward III. in 1649, containing eleven acres, and then valued at twelve pounds, *per annum*. Part of it is a square bowling-green, terraced round, and shaded with tall elms.

Besides these public structures, there are some private ones, remarkable for their antiquity, and having been

the palaces or temporary residence of persons of royal or baronial dignity.

In Panden is a house, called Panden-hall, which was the palace of the kings of Northumberland under the Saxon heptarchy. In that part of the town called the Side, is an ancient house, an appendix to the castle, which was a palace of the kings of England, in which they resided in their expeditions against Scotland. It is now called Lumley-place, from its being afterwards the residence of the lords Lumley of Lumley-castle.

In Newgate-street is an ancient house called the Scotch Inn, from its being the quarters of the kings and nobility of Scotland, in the time of a truce with that kingdom: also the Earls Inn, from its belonging to the earls of Northumberland.

In the street called the Close, is an ancient house situated on the banks of the Tyne, called Northumberland-house, from its being formerly the property and occasional residence of the earls of Northumberland.

In West-gate, near St. Mary's hospital, is a house called Westmoreland-place, which belongs to the Nevils, earls of Westmoreland.

In Pilgrim-street is a house called the Pilgrims Inn, from the great multitudes of religious devotees which formerly frequented it, in their way to the shrine of the Virgin Mary, in the village of Jes-mount, that is, the Mount of Jesus.

At the upper end of the same street, is the house of Sir Walter Calverley Bracket, Bart. It is an ancient structure, being the remains of the Franciscan 109, to which has been added two new wings.

Newcastle, soon after the preaching of the gospel in Britain, was famous for its monasteries, hospitals, alms-houses, and churches. There were six monasteries, viz. St. Bartholomews, the Franciscans, the Domus Fratrum Predicatorum, the St. Austins, [the Domus Fratrum de Penitentia, the Domus Fratrum Carmeli Monte.

St. Bartholomews was founded by king Henry I. for Benedictine nuns; it was situated in Newgate-street. A back gate leading to it still retains the name, together with the garden, which is in a square valley, extending to a place called High-friar-chair. Besides other possessions not now certainly known, they owned the pleasant village of Stellar, on the southern banks of the Tyne, in the bishopric of Durham. It is believed they had a very large property in Newcastle, consisting in wastes and houses. The garden of the post-house was one of these wastes. A plot of ground adjoining to the moor belonged to them, and is still called the Nun-moor. The monastery and chapel in Gateshead, now called Gateshead-house is said to have been a cell to these nuns, and paid an annual rent of two shillings. St. Mary's hospital, in Westgate-street, was also dependent upon them. Their annual revenue at the suppression, amounted to thirty-six pounds, ten shillings.

The monastery of the Franciscans, Grey friars, or Friars minors, was founded in the reign of Henry III. by the Carlols, then wealthy merchants in Newcastle. It was situated near the lane called High-friar-chair, opposite to the Ficket-tower. It consisted of a warden, eight friars, and two novices.

The Domus Fratrum Predicatorum, or the Monastery of the Preaching, or Dominican friars, was founded in honour of St. Dominic, by Sir Peter and Sir Nicholas Scot, merchants in Newcastle, on a piece of ground given by three sisters. It seems from its remains to have been a very handsome structure. The grass area is about eighty-seven feet in length, and as many in breadth. On the east side was a chapel, now the hall of the smiths company. On the west an ancient well, called Our Lady's well. On the south is the Cordwainers-hall, turned into apartments for three widows. On the north were the gardens. It consisted of a prior and twelve brethren, dependent upon Tinemouth; and their revenues, at the general suppression, was valued at two pounds, nineteen shillings and six-pence. It was granted to the corporation of Newcastle, in consideration of their paying fifty-three pounds, seven shillings and six-

pence; and the priory is still preserved from depredations by several companies who have their halls in it.

The monastery of St. Austin was founded by William lord Ross, baron of Wark upon Tweed. It was situated in the Manour-chace, formerly called Cow-gate. It was a handsome edifice, adorned with cloisters, and had a curious chapel. It was sometimes the residence of the kings of England in the expeditions against the Scots. After the suppression of religious houses, it was for some time made use of by government for a magazine and a storehouse, and was called, by the townsmen, the artillery-yard. King James I. gave it to a Scotchman, who uncovered it, and sold the lead; but it was lost at sea before it reached the market. He also sold some of the stones to Sir Peter Riddel, with which he built the south end of his house. Out of the ruins of this structure has since arose a work-house for the poor; a house of correction; a charity-school for the parish of All-saints, and a dwelling for the master, erected in the year 1723. Part of the garden that belonged to it is now occupied by the surgeon's hall, and two of the town hospitals.

The Domus Fratrum de Penitentia J. Christi, or the monastery of the brethren of the penance of Jesus Christ, was situated near West-gate by the White-friar-tower. King Henry III. at the request of Robert Bruce, gave it a piece of ground called Stable-garth.

Domus Fratrum Carmeli Monte, or monastery of White friars, was founded by king Edward I. in honour of the Virgin Mary, for a prior, seven brethren, and two novices; and on the suppression was valued at nine pounds, eleven shillings and four-pence, *per annum*.

The Carmelites, or White friars, had also another monastery in this town, situated on the Wall-knowl, and founded, either by Laurentius de Acton, or Roger de Thornton. But whichever of these was the founder, it is certain, that Thornton was a great benefactor to it. From its being dedicated to St. Michael, and situated on an eminence, it was called St. Michael's Mount.

Newcastle had also four hospitals, viz. that of St. Mary Magdalen, the Virgin Mary, the Holy Trinity, and the Maison Dieu, or St. Catharine.

The hospital of St. Mary Magdalen was founded by king Henry I. for a master, brethren, and sisters, to receive leprous persons. After that distemper declined, it became an asylum for the poor of the town, in the time of pestilence. Fourteen persons within the house were each allowed a room, eight shillings a month, and coals. Fifteen without the house had a different allowance; some eight shillings, some five shillings, and some two shillings and six-pence a month. In the reign of Edward III. Laurentius de Acton had the first fruits of it, amounting annually to two hundred marks. John Bland, who was then master, paid him forty marks for his own right. Bland was a very considerable patron to this hospital. He built the consistory, and ornamented the chapel, where he was afterwards buried. It stood on the summit of a hill without Pilgrim-street-gate.

The hospital of the Virgin Mary was a sort of hospital for lodging the helpless stranger, and indigent traveller; an eleemosynary for the sick and needy, and to give sepulture to such as died there. It was allowed nine chaldrons of coals annually, and had a chaplain to attend it; and the annual revenues amounted to thirty-three pounds, fifteen shillings.

In the ninth year of the reign of James I. the corporation of Newcastle obtained a charter for it, and converted it into a grammar-school. There is still in the chapel belonging to it, the effigies of the Virgin Mary, with the child Jesus upon her knees. It is situated in Westgate-street, and now called the West Spittle.

The hospital of the Holy Trinity was founded by William de Acton, mayor of Newcastle. It stood on the Wall-knowl, and was surrendered to Henry VIII. but the annual revenues are not mentioned.

The hospital of St. Catharine, or the Maison Dieu, was founded by Roger de Thornton, in the reign of Henry

Henry IV. It was situated on the south side of the Sand-hill; and the chaplain, who presided over it, had the care of nine poor men, and four poor women. In the thirty-fourth year of the reign of Henry VI. the corporation obtained from the founder the use of the hall and kitchen for a very laudable purpose, viz. that giving wedding entertainments to new married people, and where they received the offering and gifts of their friends. The hall is adorned with the arms of several generous benefactors, and some very curious carvings in wood.

During the unhappy differences between Charles I. and his parliament, Newcastle was besieged by the Scots in the year 1643, the marquis of Newcastle being then governor for the king. The commander burnt a hundred houses in the suburbs; he made a sally, but was repulsed, and one of the outworks was taken. The enemy preserved it close both from the north and south sides; the Scots dividing their army, and fifteen hundred of them crossing the Tyne. But general Lesley retiring, it was besieged again the next year by the Scots, under the command of the earls of Calender and Leven, who took possession of the bridge, the inhabitants retiring to the high-town for shelter. Three thousand countrymen being summoned by general Leven, to assist him with spades, mattocks, &c. the place was taken by storm. The mayor, Sir John Merlay, retired to the castle with three Scottish lords, Crawford, Rea, and Maxwell; five hundred men, and many women and children; but thought proper to surrender it soon after, in order to save the lives of those who had fled thither for shelter. The three Scottish noblemen were sent into their own country in order to take their trial; but most of the townsmen saved their effects by means of a composition. An order soon after arrived for trying the mayor by a council of war; some of the aldermen were disfranchised; the corporation was new modelled, not according to the tenor of the charter, but in a manner most conducive to the views of the parliament. At the same time the plague raged with great violence in the town; and coals were at a high price, by a parliamentary impost of four shillings per chaldron, for the maintenance of the garrison.

In the year 1645, five hundred pounds were ordered to be raised upon coals, for the relief of the poor. In 1646, the king visited the town, from Lumley-castle, and lodged with Leven, the Scotch general, in the Franciscan abbey, where a sermon was preached before him by the Scotch metropolitan, who was so little affected at the sight of suffering majesty, and had so small a portion of the grace of modesty, that after his discourse was ended, he called for the fifty second psalm, which begins, "Why dost thou, tyrant, boast thyself, thy wicked works to praise." His majesty that moment standing up, called for the fifty-sixth psalm, which begins, "Have mercy, lord, on me, I pray, for men would me devour." The congregation sung his majesty's.

In the year 1249, Newcastle was almost wholly consumed by fire; and in 1339, it suffered great damage by water, being surprised in the still hours of the night with a rapid, impetuous flood, which forced its way through the town-wall, bore down six perches of it, and swept away above one hundred and twenty persons, both men and women.

Before we entirely leave Newcastle, it will be proper to observe, as a proof of the salubrity of the air, in that part of the county, that in 1743, two old men, the father and son, were subpoena'd to an assize held in that town, as witnesses from a neighbouring village; the father was one hundred and thirty-five years of age, and his son ninety-five, both of them hearty, and retaining their sight and hearing; and the next year, one Adam Turnbull died in Newcastle, aged one hundred and twelve, who had married four wives, and the last when he was near a hundred years of age.

This town sends two members to parliament; has two excellent weekly markets, held Tuesdays and Saturdays; and two large annual fairs, viz. August the first, and on St. Luke's day; the former continues eight days; the

three first are for horned cattle, sheep and hogs; the other five for cloth, woollen, and various other goods.

About five miles from Newcastle are the iron works, late Crawley's, supposed to be the largest manufactory of the kind in Europe. Several hundred hands are employed in it; inasmuch that twenty thousand pounds a year is paid in wages. They earn from one shilling to two shillings and six-pence per day; and some of the foremen so high as two hundred pounds a year. The quantity of iron they work up is very great, employing three ships to the Baltic, that each make ten voyages yearly, and bring seventy tons at a time; which amounts to two thousand one hundred tons, besides five hundred tons more freighted in others. They use a considerable deal of American iron, which is as good as the best Swedish, and for some purposes much better. They would use more of it, if large quantities could be procured; but they cannot get it.

They use annually seven thousand bolls of coals, at sixteen bushels each.

They manufacture anchors as high as seventy-hundred weight, carriages of cannon, hoes, spades, axes, hooks, chains, &c.

In general the greatest part of their work is for exportation, and they are employed very considerably by the East-India Company. They have of late had a prodigious artillery demand from that company.

During the war their business was extremely great, but declined upon the peace, for anchors and mooring-chains; however, the demand these last seven or eight years has been very regular and spirited.

Here are several machines erected for accelerating several operations in the manufacture, such as copper rollers, for squeezing bars into hoops; scissars for cutting bars of iron, turning cranes for moving anchors into and out of the fire; and the beating hammer, lifted by the cogs of a wheel. These are machines of manifest utility, simple in their construction, and all moved by water; nevertheless there is great part of the work, and that of a very laborious nature, executed by manual labour; for the performance of which, machines might be erected with very little difficulty.

About seven miles from Newcastle, stands North-Shields, so called from its northern situation upon the river Tyne, and being a shield or shelter for the shipping. In the time of king Edward I. it was so small that it consisted only of six cottages, inhabited by fishermen. It is now so considerably increased as to be little inferior to Wapping, by the river Thames, which place it greatly resembles.

A little below this village is a garrison, called Clifford's Fort, which, in the year 1644, was taken by the Scots in the reign of king Charles I. It had in it five pieces of ordnance, arms, powder, and some prisoners; nine Scotchmen were killed on this occasion. It is a strong and hand some stone-building, well mounted with cannon; from which a hill ascends by a large square building, lately erected, called the barracks, for the use of the soldiers and artillery.

Not far distant from this fort stands the pleasant marine villa of Tynemouth, famous for its monastery, founded by Oswald, king of Northumberland, and dedicated to the Blessed Virgin. It was plundered by the Danish rovers in three several descents and expeditions. The first was at the end of the eighth century, the second, in the reign of king Ethelred, under Hinquar and Hubba; and the third, in the reign of king Athelstan. What made them more intent upon ravaging the monasteries was, that the most valuable effects in the adjacent country, were, on the approach of an enemy, concealed in them for their better security. The poor defenceless monks on the descent of the piratical Hinquar and Hubba, fled with terror to their church, where they hoped for safety. But they were fatally mistaken, the brutal Danes set fire to the structure, and reduced the whole, together with the trembling religious, to ashes. This crime, however, did not long go unpunished: their sovereign, king Ethelred, and his father-in-law, Offa, king of Mercia, roused at the news of such an atrocious deed, united their forces, drove them

in confusion to their ships, and a storm arising soon after, they were driven on the rocks, and almost every soul of them perished.

This sacred fabric lay in ruins, solorn, and desolate, till the reign of Edward the confessor, when Tonstan, earl of Northumberland, from a motive of ambition rather than of piety, rebuilt and endowed it for black canons, and dedicated it to St. Mary and St. Oswin; the remains of the latter having been searched for and discovered under the ruins.

That earl being soon after banished for his many murders and outrages, after several adventures when he burnt and plundered the coast as an enemy's country, at length engaged Harold Harfargar, king of Norway, who was then pushing his conquests in the north of Scotland, to enter the harbour of Tynemouth, and attempt to gain the crown, then possessed by his brother Harold II. Unawed by his new foundation of St. Mary and St. Oswin, he, in concert with the Dane, plundered and wasted the country on both sides the river Tyne. After committing these outrages they again put to sea, and entered the mouth of the Humber, where they committed the most horrid barbarities. A body of forces marched to oppose them under the command of Edwin and Morcar, but were defeated. But at Stamford-bridge, they were attacked by king Harold himself. Both armies were nearly equal, each amounting to about sixty thousand men. The victory was contended for with such astonishing ardor by the enemy, that a single soldier, for a considerable time, defended the pass at the bridge against the whole English army. Animated by this surprizing valour, his countrymen fought desperately from seven in the morning to three in the afternoon; when both their king and Tonstan falling, and the flower of their troops being slain, Harold obtained a complete, but bloody victory. Of the whole army that entered the Tyne in five hundred ships, twenty vessels were sufficient to carry home the survivors to Norway, together with their young prince Olaus.

This religious house preserved its independency from the time of king Oswald, till the descent of William the Norman, when it was degraded to a cell. It was first made subject to Benedict Biscop's foundation at Girwy; next, to Bishop Carilepho's, at Durham; and lastly, to St. Albans, in Hertfordshire. This was done by three governors, or earls of Northumberland, Walcof, Albecie, and Robert Mowbray. Walcof pretended it was an unfit place for devotion, by its being situated on a frightful precipice, and a noisy tumultuous shore: but in reality it was to erect a fortress within its precincts, by the order of his sovereign, who was wholly regardless of religion. Robert Mowbray's motive was of a very low kind; being no other than a grudge he bore to the bishop of Durham, and a desire of mortifying him by that arbitrary act: but he afterwards took sanctuary at that very altar which he thus dishonoured, for treason; by that unhappy step burying in utter oblivion all his past honours, and at once destroying all his future hopes, forfeiting by that rash act two hundred and eighty fiefs, left him by his uncle, the bishop of Constance.

The prior and canons of Tynemouth had twenty-seven villas in Northumberland belonging to them, with their royalties, viz. Tynemouth, Milaton, Shields, East Chirton, East Preston, Monkton, Whitley, Murton, Eresdon, Backworth, Seghill, Walsington, Dissington, Elswick, Wylam, Hertford, Cowpon, Bebside, Welden, Hauxley, Ambell, Eglington, Bewick, Lilburn, Flatworth, Middle-Chirton, West Chirton. Within these lordships they returned the king's writs, and were exempt from cornage.

They had also the lands of Royeley and Denam. They likewise possessed the tithes of Corbridge, Ovington, Wylam, Newburn, Dissington, Callerton, Elswick, Blathall, Warkworth, Ambell, Rothbury, and Wooley, in Northumberland; also the tithes of Hirtnefs, in the Bishopric of Durham, and of Middleton upon Tees, in Yorkshire.

They had the impropriations and advowsons of Tynemouth, Woodhorn, Whalton, Bolham, Bewick, Eg-

lington, Hartburn, Shilbottle, and Haltwefel, in Northumberland; and of Concliff, in the Bishopric of Durham.

They possessed seventeen messuages, and a close called Wardens-close, in Newcastle upon Tyne.

They had a weekly market at their town of Bewick, and an annual fair at Tynemouth; also an harbour now called the Prior's Harbour; all which possessions were confirmed to them by royal charter.

By a grant from John lord Greylock, and Sir Robert Somerville, in the year 1296, and in the twenty-fourth of king Edward I. they had carriage-roads for themselves and their tenants through Benton-moors, with liberty of pasture, for twenty-four beasts of any kind; which grant was confirmed by Ralph, lord Greylock, in the fourteenth year of the reign of king Richard II.

Ralph, son of William, lord Greylock, founded a chantry in their church of Tynemouth, in the year 1315, and the eighth of king Edward II.

John, son of Sir Henry de Harrington, gave to their vicar of Tynemouth, Alan Whitehead, lands in L. Benton; for which he did homage to the lord's court at L. Benton, in the eighth of king Richard II.

The same Alan Whitehead, and Thomas de Whalton, in consideration of their honourable support and maintenance in the priory, became benefactors.

Their annual revenues, separate from St. Albans, were valued upon the suppression at three hundred and ninety-six pounds, ten shillings and five-pence. The site of the priory and most of the lands were granted in the fifth of Edward VI. to John Dudley, duke of Northumberland; but by his attainder in the next reign reverted to the crown, in which they remained in the tenth of queen Elizabeth.

The priory-church appears by its ruins to have been a most magnificent structure. At the east end is an oratory very entire, eighteen feet long, nine feet broad, and nine feet high; the roof arched with stone, with sculptures in relief, of the Blessed-Virgin, and the twelve apostles.

The gate-way, with a tower over it, belonging to the priory, is still standing.

It is so far from being an unfit place for devotion, that few can exceed it for presenting the mind with a variety of solemn objects, capable of raising it to an adoration and awful reverence of the Deity. The very precipice it stands on, lofty and almost perpendicular, seem calculated to inspire the soul with great and serious sentiments.

On its being converted to a fortress, it was called Tynemouth castle. In the year 1644, and the twentieth of Charles I. it was besieged and taken by the Scots. Thirty-eight pieces of ordnance, and store of arms, ammunition and provisions, fell into their hands. The garrison were allowed to march out with their baggage, and obliged to submit to all the injunctions of the parliament. Six prisoners made their escape by letting themselves down through a privy-house, with ropes and several sheets tied together, under the favour of a violent storm of wind. The sum of five thousand pounds was ordered by the parliament to repair it, and the works at Newcastle, the town walls, bridge, and garrison. Colonel Henry Lilburn was made governor of it, who being weary of their service, declared, with the lieutenant colonel, and most of the garrison, for the king; on the news of which at Newcastle, Sir Arthur Hezelrigge immediately marched against them from that town, of which he was governor, with a body of forces. For want of competent ladders, they entered the port-holes of the castle in the face of the cannon playing upon them, and after a smart encounter re-took it. Colonel Lilburn, and many others were slain; the rest received quarter.

On the north side of the ruins of the priory church, is a large house, built by Colonel Henry Villier's, governor of Tynemouth, by leave from the crown; who also had power to erect a light house, and to receive one shilling for every English, and six-pence for every foreign ship anchoring in the harbour of Shields, which

brought him in an income of about eighty pounds a year. His funeral monument is in the priory-church-yard, with the following inscription :

Hic sitæ sunt mortales reliquæ
Henrici Villiers, Armigeri,
Stirpe antiqua prognati.
Unici

Honoratissimi Comitis de Jersey
Fratris.

Nec non hujus presidii
Circiter viginti Annos,
Fidelis et perquam dilectus
Præfectus.

Vixit Annos 49, Obiit 18, Aug.
Anno Dom. MDCCVII.

Malcolm, king of Scots, and his son, prince Edward, slain on St. Brice's day, in the year 1094, and in the seventh of king William II. at Alnwick-castle, were buried at this church.

After the victory obtained over the Scots, by king Edward I. in the year 1298, his majesty visited the shrine of St. Mary, and St. Oswin, at Tynemouth, and staid some time; as did his queen whilst he was in Scotland, in the year 1303.

John Wethamsede, abbot of St. Albans, a learned historian, was a canon of this priory; and after his high promotion presented it with a gold chalice of great weight.

John de Tynemouth, an eminent, sacred biographer, was born at Tynemouth, and is said to have been vicar of this church.

The present church of Tynemouth stands a mile west from it, near the flexure of the great road to Shields. In the year 1668, and the twentieth of Charles II. it was consecrated by bishop Cosins.

In the year 1532, a fish was cast ashore at Tynemouth, not of the whale kind, which measured from head to tail, ninety feet; and from back to belly, thirty-four feet; the mouth was upwards of twenty-two feet long, with jaws proportionable; the ribs, which were thirty in number, measured each twenty-one feet in length, and a foot and a half round: it had five very large throats, and twenty-five smaller passages, into three vast bellies: it had two fins, each of which was about fifteen feet long, and was a sufficient load for ten oxen; the eyes were not much larger than those of an ox, but placed at the distance of twenty-two feet from each other: instead of teeth it had plates of a horny substance, and a tongue about twenty-seven feet long: the tail, which was forked and indented like a saw, measured twenty-six feet in length.

At a small distance to the northward of Tynemouth is Cullercoats, which is only remarkable for having a very commodious little port of artificial construction. It is dry at low-water mark, and only serves for coals and salt belonging to the works of particular persons, at whose expence it was constructed.

Five miles north-west of Tynemouth, is Season-Sluice, another artificial port, formed by Ralph Delaval, an able admiral of the last century, on his own plan, and entirely at his own expence, for the benefit of himself and his friends, but without excluding others who chose to use it. In constructing this small harbour he found great difficulties, which exercised his skill and patience; a stone pier, which covered it from the north-east wind, was more than once carried away by the sea; and on his overcoming this difficulty, by using timber as well as stone, he found a new inconvenience, his port filling up with mud and sand, though a pretty rapid stream ran through it. To remove this, he placed a strong sluice with flood-gates upon his brook, which being shut by the coming in of the tide, the water behind collected itself into a body, and forcing a passage at the ebb, carried all before it, and thus twice in twenty four hours scoured the bed of the harbour clean. This port, though sometimes called Season-Sluice, is more commonly termed Season-Delaval, from the name of the ingenious gentleman who formed it. It admits small vessels, yet larger vessels may lie safe, and receive their lading in the road.

Prudhow is a town and castle, pleasantly seated on the ridge of a hill, eight miles to the west of Newcastle, and about two from the wall; Camden would have it to be the Procolitia of the Romans; but that has been more properly placed at Carrabrugh. This castle was famous for its resisting all attempts against it. King Henry I. gave it to Gilbert de Umfranville, which, for many succeeding reigns, continued in that name. In the reign of Henry II. Odonell de Umfranville bravely defended it against William, king of the Scots, who, ambitious of conquering so strong a place, laid close siege against it; but by its own strength, and the help of Robert de Stutevil, he was repulsed, and it continued as before in that family for many succeeding ages. In the reign of Henry VI. it was given to Henry, earl of Northumberland, who was afterwards slain in the battle of St. Alban's, fighting for the Lancastrian line. Henry, his son, espousing the same cause, forfeited most of his possessions, and this castle was given to Robert, lord Ogle, for life; afterwards it came again to the earls of Northumberland, in whose posterity it still continues. Most of the walls have suffered greatly, only the square tower in the middle, and a lesser one at the end, seem to be pretty entire.

At Fenham, a small village near Newcastle, some coal-pits are said to have been burning several years. The flames are visible at night, and may be traced in the day by the sulphur on the ground.

At Benwell, also near Newcastle, several urns have been dug up with coins in them; one of these urns has been deposited in the library at Durham, where it still remains entire.

Having viewed every thing curious in or near Newcastle, we pursued our tour towards Morpeth, and at the four mile stone took the road that branches off to the villa of North Gosforth, near which is the seat of Charles Brandling, Esq. It is a large modern structure of white free-stone, and hewn work, after a design in Pain's architecture. It stands on a rising ground, from which the villa of Newbiggen, of Kenton, of Long Benton, and an opening between two distant hills, into the bishopric of Durham are in view. Three miles north-east from it is the villa of Seghill, supposed by Camden and others to have been the Roman station Segedunum, since fixed at Carr-vill. It was anciently a seat and manor belonging to the younger branch of the family of the Mitfords; but is at present the seat of Sir Lancelot Allgood, of Nanwick, Knt.

About four miles from Seghill, is Delaval-castle, or Seaton Delaval, the seat of Sir Francis Blake Delaval, knight of the bath. It is a modern structure, after a design of Sir John Vanburgh, the architect of Blenheim, in Oxfordshire; no remains of the ancient baronial castle being now visible. When finished, it will be a perfect quadrangle, each side two hundred and twenty feet. The main entrance is to the north, into a lofty and stately hall, above which is a gallery. In the niches of the wall are six handsome sculptured female figures, representing the sciences, with their symbols, viz. astronomy, architecture, and sculpture, on one side; and on the other, geography, painting, and music; the floor of the hall of black and white marble. Before the south front is a grass-lawn, edged with plantations; and beyond it, a spacious avenue, with shady walks on each side; a swimming-bath about mid-way, terminated by an obelisk; the ancient ruins of Tynemouth-priory, and the ocean being in sight. To the north it has an extensive prospect of near sixty miles, the mountain of Cheviot being visible on a clear day. To the east, through several openings in little groves, are seen pieces of statuary; also a large and spacious riding-house; and a beautiful garden, with a conservatory, or green house; and a delightful view of the sea, which gives Seaton Delaval, in this particular, infinitely the advantage over Blenheim. To the west, is an avenue, a mile and a quarter in length, and an obelisk about half-way. Near is the family chapel situated in a grove. By the entrance on the right hand, is an effigy in stone of one of the family who made the crusade, recumbent, and in armour; his legs crossed, his feet resting on a lion,

and his hands elevated. Opposite to him on the left hand is another of a lady, recumbent likewise, and her hands elevated.

A mile from this noble seat, is the sea-port and fishing-town of Hartley, which, in the reign of king John, was held of the barony of Gaugy, by Adam de Jemont. It was afterwards, in the reign of king Richard II. in the possession of Henry Delaval, Knt. and at present belongs to Sir Francis. It is a well built and improving marine villa, populous, and the inhabitants industrious, situated on a bold and rocky shore; harbour to the north of it, by a spacious sandy bay. Four great works are carrying on at it, viz. a coal-work, a salt-work, a copperas-work, and a glass-work; the latter a handsome building, two hundred and twenty feet in front; the side-walls to the roof thirty-six feet, the property of Thomas Delaval, Esq; fourth brother to Sir Francis and Sir John.

Near the sixth mile stone, a road branches off on the right hand to Bedlington, a large, well built, and pleasant villa, situated on an eminence; the manor of which belongs to the see of Durham, as part of the patrimony of St. Cuthbert, including all that space on the sea-coast between the rivers Blyth and Wanbeck, known by the name of Bedlingtonshire. Out of every plow-land in this manor, the hospital of St. Giles, near Durham, received a thrave of corn, for the relief of poor strangers and travellers, till it was agreed to pay nine shillings in lieu of it at a certain time, within fifteen days after the feast of St. Michael, and in case of failure to pay ten shillings.

When the lands belonging to the see of Durham were put up to sale by the parliament, January the twenty-first, 1649, this manor, and Choppington farm, were purchased for one thousand two hundred and ninety-six pounds and five-pence halfpenny, by Robert Fenwick, Esq; a representative in parliament for Northumberland, in the years 1654, 1656.

In a small tract published in the year 1660, it was affirmed, that at the restoration the purchasers of church-lands offered the king the capital sum of five hundred thousand pounds, to confirm their right for ninety-nine years, on the payment of the old rents to the bishops and clergy; which offer his majesty was so far from complying with, that he granted a commission for enquiring after all such purchases.

The village consists of one long and wide street, and forms a kind of sloping avenue to the river Blythe, which is the southern boundary to the shire, and glides past it between two steep banks, and supplies a large iron-work with water. The church is a small structure covered with lead, with an old tower.

On the south side of the river Blyth, is Bebside, the manor of which belonged to the priory of Tynemouth; which, with their manor of Cowpon on the banks of the same river, were assigned as securities to Ralph, lord Greylock, for the performance of certain conditions on their part, on his lordship's founding a chantery in their church of Tynemouth, in the year 1315, and in the eighth of king Edward II. In the tenth year of the reign of queen Elizabeth, it belonged to John Ogle, Esq; and in the year 1715, and the second of king George I. it was in the possession of John Johnson, Esq; then high sheriff of Northumberland. It is at present the seat of his daughter, Mrs. Mary Fielding, relict of the late Captain Fielding.

About two miles from Bebside is South Blyth, a well built village and sea-port on the south side of the river Blyth, from which it derives its name. It is in the possession of Matthew Ridley, Esq; of Heaton, near Newcastle.

A little beyond this place on the left hand is Blaignon, one of the manors of the barony of Morpeth, of which it was held by John de Plessis, in the reign of Edward I. a benefactor to the priory of New-minster. It paid annually for cornage on the feast of St. Cuthbert, in September, one shilling and one penny halfpenny. It was the seat and manor of Matthew White, Esq; high sheriff of Northumberland in the year 1720, who built a handsome house, to which his son, the late Sir Matthew

White, made some additions and ornaments. It is now in the possession of his nephew, Sir Matthew White Ridley, Bart.

The post-road crosses the river Blyth, by a stone-bridge of one arch, and brings us to Stanington, an ancient villa, and another of the manors of the barony of Morpeth. In the old rolls of the barony, it stands distinguished under the name of Cook's-land. It paid annually for cornage one shilling and one penny halfpenny on St. Cuthbert's day, in September. The church stands on the north side of the village. The third Roger de Merley, baron of Morpeth, founded a chantery in it in honour of the Blessed Virgin, for one chaplain, to be chosen by the arch-deacon of Northumberland for the time being. He gave to it one toft and croft on the south side of the church, with common of pasture for four cows, and thirty ewes with their followers of one year old. He also gave to it ten acres of land, and half of a plough-land, in Clifton, and twenty acres of land in Coldwell, to hold of the priory of Hexham, by the annual rent of one shilling and six-pence, to be paid on the feast of St. Peter de Vincula, and answering to the priors court. He gave to it besides, three ox-gangs of land in Coldwell, with common of pasture in Clifton and Coldwell, to hold of Gibbert de Coniers and his heirs by the annual rent of one shilling. He likewise gave to it a silver chalice, gilt within, of the value of twenty-three shillings, also vestments for the use of the chaplain. Roger de Somerville gave the advowson of the church, to the priory of Newminster.

Near the fifteenth mile-stone, and two hundred and ninety-two miles from London, is Morpeth, a well built borough-town, situated upon the river Wanbeck, a contraction of Woden's-Beck, encompassed almost with little pleasant hills, on whose brows are plantations of fir, beech, and elms. It is thought to have derived its name from More-path, or the road through the more, or moor. It made no considerable figure under the Saxons and Danes; but under the first Normans it rose in dignity superior to a villa; being then erected into an honour, and stiled the barony of Morpeth, or the barony of Merlay, from its possessors the lords Merlay; one of whom founded the abbey of New-minster; on the north side of the chapel of which he was interred, with his lady, and their son Osbert. The three last lords Merlay were all of them of the name of Roger; the first of whom, by paying to king John in the year 1199, a fine of twenty marks and two good palfreys, acquired for his borough of Morpeth a weekly market, and an annual fair. He was interred at New-minster. The second Roger, lord Merlay, contributed greatly to the prosperity of his borough at Morpeth; he confirmed all its privileges: under his patronage and influence an hospital was founded at Catchburn; and was afterwards interred at the entrance of the priory church at New-minster.

By the charter of the third Roger, lord Merlay, the burgesses of Morpeth and their successors were freed from all taxes, subsidies, or contributions, except on the king's account in military expeditions, or for the public defence, or the marriage of the lord's eldest son or daughter, or for his own redemption out of prison. By the same charter the prizes raised by his officers or servants, or those of his successors, on bread, beer, or other things, were assigned to the creditors within the borough to be paid within forty days, and in the mean time the lord was at liberty to make other prizes at his pleasure. Their accustomed common right of pasture, and other conveniences, were confirmed to them and their successors, and way-leave granted to and from the town, cornfields and meadows only excepted. He founded a chantery in the parish church of Stanington, and was interred in the New-minster near the remains of his father.

The borough of Morpeth never sent members to parliament before the first year of queen Mary's reign in 1553. It is governed by two bailiffs and seven burgesses, who are all elected annually out of the principal inhabitants, paying scot and lot; they are about two hundred in number, and by these also the members of parliament are elected.

The market-place is in the center of the town. It has a neat market-cross, on which is the following inscription :

The Hon. Philip Howard, and Sir Henry Belofyfe, Knt. The only benefactors of this cross.
Anno Dom. 1699.

On the west side of the market-place is the town-hall. It is a handsome structure, of white free-stone, and hewn work, with a piazza, and a tower at each end, erected in the year 1714, at the expence of the Right Hon. the Earl of Carlisle, whose court is kept in it, as also the quarter-sessions for the county.

At a small distance from it, is a neat tower of white free-stone, wherein is a good ring of bells, and a large clock.

Between the town-hall and the bridge is the county-gaol, a modern and decent structure.

At the north end of this bridge is a small, but neat chapel, of modern erection, of white free-stone, and hewn-work. At the west end of it is a grammar-school; an antient building; which was founded by king Edward VI. and endowed with the lands of two dissolved chanteries in Morpeth, and one at Neither Witton.

The parochial church stands on the south side of the bridge, at a considerable distance from the town, on a hill called Kirk-hill, in the west park, on the west side of the post road. One of the chanteries in it just mentioned was founded in honour of the Blessed Virgin. It has three good isles, a gallery at the west end, and another between the pillars of the north isle, a vestry, and one bell. In the chancel is a flat sepulchral stone with the following inscription :

In obitum Henrici Graii nuper de
Novo monasterio, armig. qui obiit ultimo
Die Martii, Anno Domini 1597; posuit
Thomas Grey, filius primogenitus
Pietatis ergo.

Underneath is the coat armorial of the Greys, of Chillingham, and on one side this motto :

De bon Valoir.

Below are the following verses in Latin :

Conditus hic jaceo quartus genitore Radulpho

Filius ex Graio milite sic jaceo.

Nupta fuit mihi Woddringtonia chara Maria,

Militis ac clari nata Johannis ea :

Una dies partus nos, ut Baptismata una,

Junxit sic una lex hymenea toro.

Annos bis septem sociale federe Juncti ;

Ruperunt tetrici vincula nostra deæ,

Bis Binos pueros mihi, tresque Lucina puellos,

Præbuit extincti pignora chara mei.

The rectory house, which stands on the east side of the road, is little better than a ruin.

Near the church is the baronial castle, which has been long in ruins. One tower only is left standing, with part of two speculating turrets on an eminence, commanding a fine view of the town, and of the winding course of the Wansbeck, crossed by a bridge of two arches, and bordered with hanging woods.

Morpeth sends two members to parliament, has a weekly market on Wednesday, and two annual fairs, viz. Holy-Thursday, for horned cattle, sheep, and horses; and the Wednesday before July the twenty-second, for cattle.

The abbey of New-minster is situated on the banks of the Wansbeck, half a mile from Morpeth. It was founded by Ralph de Merlay and his lady, in the year 1138, for Cistercian monks, and dedicated to the Blessed Virgin. The founders endowed it with the lordship of Ritton, part of the woods of Witton, and all the vale between Morpeth and Hebre, by the brook of Fulbeck to its fall into Cotingburn, and by Cotingburn to its fall into the Wansbeck.

Besides these lands, its estates were greatly increased by various benefactions; so that at the dissolution, when there were about fifteen religious in the abbey, the annual revenues were computed at one hundred and forty pounds, ten shillings and four-pence.

The whole structure is now razed to its very foundations, and nothing remains to speak its antiquity, ex-

cept a small fragment or two of the portal or gate-way leading to it.

About a mile from New-minster, and on the shady banks of the same river is Mitford, formerly a famous castle. It stands in a fine park, on a mount, to all appearance the work and labour of art. It was burnt, together with the village, in the year 1216, by the German troops, which king John brought into England. Near the old castle is the church, in the old chancel of which is a large monument of free-stone erected over the tomb of one of the Bertrams, formerly lords of this castle, with his coat of arms in a concave square moulding; and below it the following inscription, cut in capital letters :

Here lyeth interred with-
in this molde, a generous and
virtuous wight, whose
dewe deserte cannot be
told, from slender skill unto
his right. He was descended
from a race of worshipful
Antiquitie. Loved he was
in his life-space, of high
eke of low degree. Rest
Bartram in this house of clay
reuf'ley unto the latter day.

Under the above epitaph is his effigy cut on the stone cover of his tomb, in relief; his hands lifted up in a praying posture, and on the edge of it these lines, in capitals :

Bartram to us so dutiful a son,
if more were fit, it should for
thee be done, who' deceased
the 7th of October, Anno Domini,
1622.

About three miles east of Morpeth is Bothall, an ancient baronial castle, now belonging to his grace the duke of Portland: but there only now remains an old tower of the castle. It is large and stately, and through it was the grand entrance. On the north front were the arms of its ancient barons. It stands on an agreeable mount on the north side of the winding trout streams of the Wansbeck, gliding between pleasant meadows and hanging woods.

Near the old castle is the parochial church. It has three handsome isles, and the pulpit placed against the north pillar entering the chancel. The lights are neat, and part of them adorned with paintings. At the east end of the south isle is a handsome tomb of alabaster, inclosed with iron rails, erected to the memories of one of the barons of Ogle and Bothall, and his lady.

In a shady solitude on the banks of the Wansbeck near Bothall, are the ruins of an ancient chapel, dedicated to the Virgin Mary. It is twenty-four feet in length, and twelve in breadth. It was built by the Ogle family, of free-stone; the roof being formed of the same materials, after a curious manner: but the remains of this chapel are now hardly visible for trees which have taken root in the very foundation.

Ashington, in this neighbourhood, once a manor of the barony of Bothall, now belongs to George Sandiford, Crowe, Esq. It stands on an eminence well sheltered with tall forest trees. It has a beautiful view of the sea, and also of Seaton-Delaval, and Bebside, through the openings of the plantations, the ground sloping regularly to a plantation of oaks by the river Wansbeck. Below this plantation is a fine grass area of a mile in length, the river during that space forming a most beautiful canal, and having on the opposite side a bank of oaks.

On the south bank of the mouth of the river Wansbeck, is a small hamlet called Cambois, belonging to Matthew Ridley, Esq. The river here is usually called Cambois-water and Cambois-harbour. It is navigable to the Stakeford for vessels of about thirty tons burden. There are two quays on the north side, one called the low, and the other the high quay.

About a mile to the northward of the harbour's mouth, is a range of cliffs by the sea, called Hawks-hugh,

hugh, from its being the recess of hawks during their breeding season.

A little to the north of this range of cliffs is Newbiggen, a village inhabited chiefly by fishermen, and consisting chiefly of one irregular street. It has several granaries for holding corn, which is exported from the bay before it, considered as one of the finest in this county. It is capacious, with a sandy bottom, and is formed by two promontaries of free-stone. Corn ships of about sixty tons burden, come up to the town; and at a little distance from the shore, ships of considerable burden may ride in safety.

On the north point of the bay are the vestiges of an old pier; many of the stones, and some of the piles of wood, being visible at low water. On the north-east side of the harbour is the church, dedicated to St. Bartholomew; but the only remains of it, are the spire and middle isle. At the west end is a small gallery, and at the east, over the communion table, the king's arms cut in wood, in alto-relievo, and said to have been the stern of a ship cast away on the rocks.

Four miles from Newbiggen is Widdrington-castle, now in the possession of Sir John Warner, knight of the Bath. It stands about a mile and a half from the sea, on a pleasant shady eminence, and has a beautiful Coquet island, on which there was formerly a cell of Benedictine monks.

Near the seventh mile stone in the great post-road leading from Morpeth, is a fine view of Warkworth-castle, now belonging to the duke of Northumberland. It is situated on an eminence above the village of Warkworth. The principal tower, and some other parts of the building are still remaining, and appear magnificent in their ruins.

Warkworth has a bridge of three arches over the river Coquet, in the middle of which is an upright stone pillar, adorned with the Percy arms; and at the south end a square tower, the gate of which was formerly of iron, with port-cullices. Warkworth has a weekly market on Thursday; and three annual fairs, viz. on the Thursday preceding St. George's, St. Lawrence's, and St. Martin's day, for black cattle, shoes, hats, and pedlars goods.

A quarter of a mile to the west of Warkworth, in the old park, on the northern bank of the river Coquet, is the Hermitage, formerly a cell for two Benedictine monks from Durham, for whose maintenance Nicholas de Farnham, bishop of that see, in the reign of Henry III. appropriated the church of Brankston; and this grant was confirmed by his successor Walter de Kirkham.

It consists of a small chapel and a bed-chamber, cut out of a solid rock of white rag-stone, in the Saxon-Gothic style; the chapel being curiously adorned with pillars, and the roof with knot-work. In a window on the south-side of the altar are the effigies of the Virgin and the child Jesus. At her feet is a hermit in a praying attitude, and near him a bull's head. All these figures are in alto-relievo. Over the entrance into the chamber is an escutcheon of arms, now effaced; and next the river, the ruin of a small building, with a fire place, probably the kitchen. On the south-side of the rock is a door and winding stairs, leading to a little garden. The range of rocks are of a considerable height and length.

Near the tenth mile stone, is a stone bridge of three arches over the river Coquet; and on the north-side is Felton, a very pleasant villa, situated on a gradual slope, now in possession of Thomas Riddel, Esq;

A little beyond the turnpike-gate is the ancient castle of Alnwick, the seat of his Grace the Duke of Northumberland, who has repaired it in a very splendid and magnificent manner. The apartments are all fitted up in the Gothic taste, and ornamented in a very light and elegant style. The principal ones are, 1. A breakfast-room, thirty-three by twenty-one. 2. Dining-room, fifty-five by twenty-two; it has two bow-windows, but irregular, the Gothic work very elegant: over the chimney, the duke's, by Reynolds. 3. A drawing-room. 4. A library, sixty-five by twenty-two, and

at the end, a chapel. 5. A saloon, forty by twenty, and a bow. The architecture of the new buildings is quite in the castle style, and very light and pleasing.

Alnwick-castle was besieged in the year 1093, by Malcolm, king of Scotland, having with him his son, prince Edward, the heir apparent to the crown. Robert Mowbray, a nobleman of great personal bravery was then governor of Northumberland. Exasperated to see his native country invaded for the fifth time by that active monarch, he determined to seek revenge. Malcolm thought himself secure by the absence of the king's troops; a circumstance which Mowbray well knew and improved to his own advantage. He came suddenly upon Malcolm by the forces of his own government: a bloody battle ensued; and the Scots, deprived of their usual courage by this surprize, gave ground. The sovereign and his son, astonished to see this change of conduct, rode from rank to rank, exhorting, intreating and imploring them to remember the Scottish arms. But all their endeavours were exerted in vain; they however persevered in the attempt till they were both slain; a disaster that completed the route, and left the English in possession both of the field of battle, and the castle. And there is still a stone column, about a mile from Alnwick, erected to perpetuate the memory of this event, and called Malcolm's-cross.

The castle was a second time besieged in the year 1174, during the reign of Henry II. by William, king of Scotland attended by an army of eighty thousand men. But preferring plunder to a siege, which in all probability would not be attended with success, he abandoned the enterprize, and pillaged the country. A body of four hundred horse from Newcastle under the command of five gentlemen, hearing of their depredations, determined to relieve their country or perish in the attempt. Bernard Bailol, a gentleman of great resolution, conduct, and experience, animated his companions, and headed the forces. They came upon the Scottish monarch unawares, while his troops were scattered and dispersed in plundering the wretched inhabitants. Alarmed at the danger, the king recalled as many of his troops as were within hearing the sound of his trumpets. In the mean time the English attacked them with great intrepidity, while the Scots, who were wearied with plundering, made but a faint resistance; their whole army was dissipated, and their king taken prisoner, after performing the most gallant actions. Many of his scattered troops were taken prisoners; others fled towards their own country, and the king himself was carried to Richmond-castle, and thence to London; where he obtained his liberty on paying an hundred thousand pounds sterling; one moiety in ready money, and the other at a fixed period of time, delivering up as security for the payment, the castles of Edinburgh, Roxburgh, Berwick, Jedworth and Sterling. He also did homage for his crown to England; the first example of that kind upon record; and as a perpetual memorial of which, he left his breast-plate, sword, and saddle, to be kept in York-minster.

In the year 1212, king John issued orders for demolishing the castle of Alnwick, on account of his suspecting Eustace de Vesey, of being disaffected to his government; but on his submission the orders were countermanded.

After the battle of Hexham-field, in the year 1463, during the reign of Edward IV. the earl of Warwick, the lords Montacute, Fauconbridge and Scrope, appeared before the castle, and summoned Sir Peter Bessly, and his Norman auxiliaries, to surrender. Sir Peter now yielding to their request, they resolved to besiege it. But Sir George Douglas coming immediately to its relief with thirteen thousand Scotsmen, the governor marched out with his friends, the enemy not daring to oppose his passage.

Near the castle is the town of Alnwick, situated on a small river called the Aln, three hundred and ten miles from London, in the road to Berwick. It is a small borough, the principal officers of which are the duke's bailiffs, and four chamberlains, annually chosen. Those

who are made freemen of the town meet on St. Mark's day, on the town moor, formerly called the forest of Aidon, on horseback, dressed in white and attended by the castle bailiff, the four chamberlains, and most of the freemen; when, by ancient custom, they pass through a deep bog, called the freeman's well, where they are sometimes up to the chin.

Alnwick is very pleasantly situated on the declivity of a hill four miles from the sea. Three ports and towers of the town hall are still standing, viz. Bond-gate, a prison for debtors and felons; Clay-port, converted into a poor-house; and Potter-gate, or the tower without a roof.

The market-place is nearly in the center of the town; and on the west side is a market-house, lately built by the duke and duchess of Northumberland, for the benefit of the corporation, in the Gothic taste. It contains seven apartments, with an ambulatory before them.

On the north side of the market place is a range of buildings, in which is the town-hall, entered by a flight of steps, where the country sessions and the elections of the knights of the shire are held. Over the hall is a tower, with a large clock.

Near the upper end of Potter-gate-street is a grammar-school, having over the entrance, the following inscription:

Hæc schola primo in usum municipum
Alaunenſium ædificata, Anno Dom. 1687.
Nunc demum instauratur, Anno Dom. 1741.

There is a neat house and garden adjoining to it, for the accommodation of the master; and the endowments amount to twenty-five or thirty pounds, *per annum*, arising chiefly out of the tolls of the town.

In the year 1448, the town was burnt by the Scots, in resentment for the burning of Dumfries, by the English.

The church is situated at the end of Bailiff-gate-street. It is capacious, has three isles, extending through three arches into the chancel. It has four galleries, and is a neat church.

The abbey of Alnwick was founded in the year 1157, by Eustace Fitz-John, for Premonstratensian canons. He dedicated it to the Virgin Mary, and endowed it with a large parcel of his baronical lands. He gave the village of Huicliff, and all the demesnes about it, on the left hand of the road leading from Alnwick to Ruck, and the wastes belonging to it, extending from Hindon to the river Aln, with the service of half the tenants. He gave it two parts of the tithes of the lordships of Tughall, Alnham, Newham, Heyſend, and Chatton, together with one moiety of the tithes of Woller. He gave it the appropriations and advowsons of Alnwick, Woller, Long Houghton, and Lesbury. He also annexed to it the priory and church of Gyſnes, now Gyſon, or Guizance, near Felton, dedicated to St. Wilfrid, of Richard Tyson's foundation, to hold in pure alms with all its privileges and endowments, a moiety of the tithes, and two beavts of land at Gyſon, the church of Halge or Haugh, the lands of Ridley, and Morwick-haugh, with liberty of erecting a corn-mill on the river Coquet, and of raising as much corn on its wastes there as they could plough; with liberty to grind it at his own mill, moulter-free. He also gave the canons for their table the tenth part of all the venison and pork killed in his parks and forests, and of all the fish taken in his fisheries by his order; and a salt work at Warkworth.

These are the chief antient privileges and possessions of Alnwick-abbey. At the time of the dissolution its annual revenues were valued at one hundred and eighty-nine pounds, fifteen shillings; at which time it had thirteen canons. In the fourth year of the reign of king Edward VI. the site of it was granted to Ralph Sadler and Laurence Winmington. It is at present in the possession of Thomas Doubleday, Esq; whose seat is erected out of the ruins which stood in his orchard, south of his pleasure-garden. The only remains of this religious pile is the court-wall to the east, through which is the entrance, of very curious architecture, with a modern-built turret at the south end, beyond which is a build-

ing seemingly of a later erection; adjoining to it is an antient strong tower, with four turrets, two at each end.

The abbey stands at a small distance from the castle, delightfully situated under a hill, on the extreme point of a peninsula, by the eastern margin of the river Aln, crossed by a bridge of two arches, whose winding-stream pleasantly runs past it; the opposite side is shaded with a bank covered with wood, through which a broken rock appears in several different places.

Between the bridge and the church is a street, which form a kind of suburbs to the town; it is called Canon-gate, from its leading to the abbey of canons, a small manor belonging to them, and now in the possession of Sir Lancelot Allgood, of Nunwick, Knt.

This town has a weekly market on Saturday, and four annual fairs, viz. May the twelfth, for horned cattle, horses and pedlary; the last Monday in July, for black cattle, horses, linen and woollen cloth; the first Monday in October, for horned cattle, horses and pedlary; and the twenty-fourth of December, for shoes, hats, poultry and woollen cloth.

About three miles from the castle of Alnwick, situated on an eminence, nearly in the middle of Huln-park, is the abbey of Huln, founded by Ralph Fresborn, a gentleman of Northumberland, for Carmelite-friars, and endowed by John, lord Vesey, with twelve acres of land lying round it. On the west side of it, is an antient tower, built by Sir Henry Percy, the fourth earl of Northumberland, as appears from the following inscription, cut in relief, on a stone which is still remaining: In the year of Christ M.CCCC.XXVIII.

This tower was builded by Sir Henry Percy,
The fourth earl of Northumberland, of great honour and worth,
That spouses'd Maud, the good lady, full of virtue and beauty,
Daughter to Sir Will. Herbert, right noble and hardy,
Earl of Pembroke, whose soules God save,
And with his grace conserve the bilder of this tower.

The founder of this monastery, Mr. Fresborn, died in the year 1274, and was, by his own desire, interred in it. It is situated in a delightful solitude on the north-east side the river Aln. The whole, except the tower, is now in ruins. It was given by queen Elizabeth, to Sir John Forster, Knt. and now belongs to his grace the duke of Northumberland, who has repaired the tower, and made a handsome road to it from his castle through the park. To the west of the abbey are the rock hills, called Brisby-hills, containing about two hundred acres, planted by his grace with forest-trees, which in a few years will greatly add to the beauty of the place.

At the north end of Alnwick-bridge a road branches off on the right hand, to Howick, one of the manors of the barony of Alnwick, in the possession of Sir Henry Grey, Bart. The old tower of Howick, mentioned by Leland, is entered by a flight of steps, and is still a fair structure, to the north end of which the late Sir Harry, father to the present, built a large handsome house, and convenient offices. It is situated within a mile of the sea; on the north side of a stream called Harwick-burn, crossed by a new stone bridge of ashler work. To the north are the stables; and to the west is a shrubbery and plantation, through which the brook takes its course between grass lawns, and passes away by a gentle fall.

On the south-east is the church, dedicated to St. Michael, rebuilt in a handsome manner by the late Sir Harry. Near it is a free-school for the education of his tenants children in reading, writing, and accounts. At his death he left two hundred pounds to support this charity.

From the summit of a hill we see at a small distance, Dunstanburgh-castle, situated on the banks of the sea, seven miles north-east of Alnwick. It was the capital seat of a barony, sometimes called the barony of Emildon. It was built in the reign of king Edward I. by Thomas, earl of Lancaster, the son of Edmund Crouchback, earl of Lancaster, brother to the said king. It is situated on an inaccessible rock over-looking the sea, and beautifully adorned with various towers, part of which

which are still remaining. It was anciently a very strong and spacious fortress, it being, by means of a deep ditch, surrounded by the sea. In the reign of Edward IV. it endured a long siege, and was at last reduced; and all the garrison, except Sir Piers de Cressley the commander, made prisoners. This castle and barony formerly belonged to the dutchy of Lancaster, but they are now in the possession of the earl of Tankerville. For the satisfaction of the reader, we have here annexed a view of this edifice.

Near the fourth mile stone a road branches off to the right which brings you to Rock, one of the manors of the barony of Alnwick. It stands on an eminence, and commands an extensive prospect both of sea and land. In it is a chapel dedicated to St. Philip and St. James. It is at present in the possession of the right honourable the earl of Jersey.

Two miles east from Rock, and a mile from the sea, stands Embleton, the barony of John de Viscount, in the reigns of king Henry III. and king Edward I. It was afterwards one of the lordships of the dutchy of Lancaster, and now belongs to the earl of Tankerville. The village is irregularly built, situated under the ridge of a hill, which intercept the prospect of the sea. The church, which is dedicated to the Holy Trinity, stands on the west side of the village, and built in the form of a cross. The roof is flat, covered with lead; a gallery is erected at the west end; near which is a good vestry, and a lofty tower. The vicarage house, which is a neat and commodious building, stands on the north side of the church-yard. On the top of the hill is a small school, where English and writing are taught to poor children. It was founded by the Rev. Mr. Edwards, and to which he gave an inclosed field, let at five pounds a year.

From the ninth mile stone is a fine view of Bamburgh-castle, situated on the summit of a steep hill near the sea; and from the stile of the architecture, especially the base of the old tower, which is of the Doric order, is thought to have been originally built by the Romans. But however that be, it must have been a place of great strength, as it was the sanctuary of the Northumberland kings, earls and barons, when the country was threatened by any invasion from an enemy. It withstood the fury of many sieges, and was, for many years, the place of confinement for state prisoners. King Ofred, during his minority, shut himself up with his tutor in this castle, on the death of king Alfred, his father, in the year 705, in order to be safe from the the violences of Edulph, a rebel lord, with had seized upon the crown. Edulph, with his partizans, besieged the castle; but the young king and his governor made so gallant a defence, that his faithful subjects had time to march to his relief. The usurper had changed the siege into a blockade; but on their approach retired with great confusion. Brithric, the royal orphan's guardian, followed him, overtook the usurper and caused him to be executed.

This royal fabric was also the retreat of Walcof, earl of Northumberland, when feeble with age, and therefore unable to oppose Malcolm, king of the Scots, at the head of a powerful army. But he was soon relieved by the valour of his son Uchtred. Enraged to see his country invaded, Uchtred marched against the Scots, at the head of a few troops hastily raised. These he disposed to the best advantage, animated them by his own valour and courage, and obtained a complete victory over the enemy. He would however have reaped a greater harvest of glory, had he not sullied it by an act of cruel inhumanity. He had among his prisoners several Scottish noblemen, generals and officers of rank. These he beheaded, placed their heads upon poles erected on the walls of the city of Durham. This brutal action sufficiently declared that his spirit was rather that of a tyrant than a hero. But Uchtred's success, not his cruelty, was regarded at the court of his sovereign king Ethelred, where it was mentioned with raptures of applause. Ethelred, in his raptures, was resolved to shew him one of the highest marks of his favour. He gave him his daughter, the princess Edgiva, in marriage, and with her the earldom of Northumber-

land, together with the county of York, for a portion; old Walcof resigning Bamburgh and other castles to his son, on his being thus allied to the throne.

Penda, the Pagan king of Mercia, besieged this castle in the year 642, after his victory over king Oswald at Oswestry in Shropshire, a prince equally remarkable for his zealous patronage of christianity and bravery. Cruelty seems to have been the characteristic of Saxon paganism. The savage Penda, not satisfied with the victory he had obtained over that Christian hero, barbarously mangled his body, and intended to have reduced this castle to ashes for making a noble defence. He accordingly caused a vast quantity of wood to be piled up under the walls, and ordered fire to be set to it as soon as the wind was favourable for carrying the fire into the place; but the wood was no sooner in a blaze, than the wind changed, blew the flames into his own camp, and obliged him to raise the siege.

In the year 1095, Robert Mowbray and his party marched into it for security, on the approach of the royal troops to chastise them for their treason. William II. besieged it in person; but Mowbray not thinking himself safe in the fortress fled to Tynemouth, where he took sanctuary at St. Oswin's shrine. He was however dragged from thence, and sent prisoner to the king. But his steward and kinsman Morel, with a courage that would have done honour to a better cause, defended the castle in the absence of his unfortunate lord, against all the efforts of the royal army. The king, finding it impossible to reduce the castle by storm, turned the siege into a blockade, and raised a fortress near it called Malvoison, or Bad Neighbour, some time before the earl's flight. Morel was not however to be terrified: he still held out and set the king's forces at defiance. Ethelred, beginning to be alarmed at this astonishing intrepidity of the garrison, determined to effect that by policy, which he could not do by force. Accordingly he ordered the earl to be led up to the very walls of the fortress, and a declaration to be made, that if the castle was not surrendered his eyes should be immediately put out. This stratagem succeeded. Morel no sooner beheld his master in this imminent danger, than he consented to give up the place upon terms. The king pleased at once by his fidelity and affection for his lord, and his gallant defence, took him into his royal favour and protection. Thus the faithfulness of the servant saved the life of the master, who was sent a prisoner to Windsor-castle, where he was retained thirty years.

Bamburgh-castle commands a very extensive prospect of the sea; and in a clear day the town of Berwick upon Tweed, the castle of Tynemouth, and the greater part of the coast between them may be seen. But a stately tower, with a Doric base already mentioned, is the only monument now remaining of its ancient grandeur.

Below the castle is the village of Bamburgh, once a royal borough, and accordingly sent members to parliament in the twenty-third year of Edward I. It is now an obscure place, but still gives name to a large tract of country called Bamburghshire, extending southward to Warkworth-bridge.

In the reign of king Henry I. a monastery of regular canons of the order of St. Austin was founded here, subordinate to the priory of Naisil, in Yorkshire. Its revenues at the time of the suppression were valued at one hundred and sixteen pounds, twelve shillings and three-pence. Here was also an hospital founded in honour of St. Mary Magdalen.

King Henry III. in the latter part of his reign founded a house near the village, for the Fratres Prædicatores, or Friars Preachers.

The church of Bamburgh, founded by king Oswald, is remarkably neat, and consists of three broad isles. Within a nich of the south wall of the chancel is the effigy in stone of a knight templar, in the usual habit and attitude; and on the north side of the chancel is a small marble monument, erected to the memory of Sir Claudius Forster, with the following inscription:

Scio quod Redemptor meus vivit in Coelis. Claudius Forsterus, eques auratus et baronettus, antiqua, numerosa, et nobili Forsterorum familia in Com.

Northumbr.

Northumbr. oriundus, Domini Nicholai Forsteri, filii fortissimi illius viri, Johannis Forsteri, qui 37 annos medeiarum marchiarum Scotiam versus Dominus guardianus extitia, filius et hæres: honoratissimis etiam Dominis Cumbriæ et Bedfordiæ comitibus, nec non insigni et illustri Fenwickorum progenie, totitque generosorum genti inter Tinam et Tucedam celeberrimo sanguine conjunctus. Castri denique Bamburg nominus Senescallus et constabularius: obiit in manerio suo de Alba Terra in Com. Northumbr. anno salutis nostræ, 1623. Memoriz suerum lugens posuit uxor ejus Domina Elizabetha, Gulielmi Fenwick de Wallingtonia, equitis aurati, filia.

Near this monument is another over the family of Sir William Forster; on which is a long inscription containing the genealogy of his whole family.

From Bamburgh-castle we have a prospect of Farm-Island, the recess of St. Cuthbert. Here was afterwards a priory of six or eight Benedictine monks, subordinate to Durham. They received annually five quarters of wheat from the manors of Tughall, and Swinchoe; besides which the corporation of Newcastle upon Tyne paid them an annual rent of thirteen marks, and ten shillings. In the reign of king Henry VIII. it was granted to the dean and chapter of Durham. It was situated in the most romantic part of the island, on a pleasant lawn, edged with rocks, by a spring of fresh water. Near it was a fort erected for its defence, called Prior-castle, from its being built by one of the priors of Durham. On the north side are five other small islands, consisting of bleak, barren rocks.

A mile north from Bamburgh, is Budle, one of the manors of the barony of Alnwick, belonging to his grace the duke of Northumberland. The village is small, situated above a fine sandy bay of the sea, on the south side of the ostium of the river Warn, which is esteemed a tolerable good harbour for small vessels of about eighty tons; being about seven or eight feet water in full tides.

On Spinelton-hill, near Budle, is a Danish intrenchment, nearly round, encompassed with three deep ditches and a high valla to the north and south, and two at the west, with a slope to the east, entered by a very wide port; two exploratory mounts near it to the south, and another to the north.

A little to the west of this intrenchment is another, likewise Danish, in the form of a crescent, very large, with the small harbour of Warn, to the north, and a romantic precipice to the south; three ditches and valla to the west and south-west; the valla of turf and stone; and still in most places pretty high. It has a most extensive prospect on all sides of both sea and land; of the two castles of Bamburgh and Holy Island, and of all ships passing and repassing.

About five miles from Budle, and three hundred and twenty-seven from London, is Belford, a small but well built town, on a gradual slope, within two miles of the sea, the prospect of which is intercepted to the east and north-east by the ridge of a hill. At the north-east end of it stands the church, dedicated to St. Mary. It was built in the year 1700, and sealed in 1759. On the top of the hill is the ruin of the old chapel; and on the north-west side, by a fine spring, is the antient manor-house, behind which was formerly a wood, of a mile in length, of large oaks, under a range of steep rocks of whinstone, now slightly shaded with young trees and brush-wood.

The town of Belford belongs entirely to Abraham Dickson, Esq; that gentleman's father procured a market and two fairs to be established at it; but the spirited conduct of the present owner is what has brought it to the condition, so flourishing to what it formerly was; thirteen years ago it did not contain above one hundred souls; but they now amount to above six times that number: and this increase has been owing to the excellent means of introducing an industry unknown to former times. Mr. Dickson has established a woollen manufacture, which already employs sixteen looms, and the spinning business goes on sufficiently to keep them

at work; a noble acquisition in a place where a few years ago a spinning-wheel was not to be seen. Another establishment of very great importance, was that of a tannery; the nearest tanners being those at Berwick and Alnwick. This was a very considerable inconvenience and disadvantage to the neighbourhood; Mr. Dickson therefore, at the expence of seven hundred pounds fixed a tannery, which now turns out to good account, and is a peculiar benefit to the inhabitants. Another very great improvement and advantage this town has received, is the erection of a new inn, where travellers may be furnished with good post-chaises, and every other accommodation. Nor is it a less benefit to this place that Mr. Dickson has by his spirited endeavours rendered the roads, both north and south, as far as his influence extended, extremely good; and had others been as sollicitous as himself about so important an object, there would not have been a mile of bad road in the whole country.

Coals had formerly been raised round Belford; but the undertaking was discontinued for many years, from a belief that the pits were exhausted; and the common report which this active gentleman heard on all sides was, that no more coal was advantageously to be had; but far from being satisfied with the general opinion of people, he not only enquired more minutely into the affair, but also tried several places, and was so fortunate as to discover a very beneficial seam, which has been since worked to infinite advantage both to the town and the proprietor.

Discovering of coal, led to the burning of lime for the purposes of agriculture as a manure, is a much more considerable way than had been before practised; and for this work three new lime kilns were erected in a most substantial part, attended with a vast expence.

This generous gentleman has still greater designs in view. He proposes to establish such manufactures, as may employ all the poor of the country; he intends to form a coal-road from his pits to the town, and he even entertains hopes of making Belford a port, though at the distance of two or three miles from the sea; this will be of the highest advantage to the town, and open markets for his coals, at present unthought of.

Mr. Dixon has erected seven new farm-houses, with all the necessary offices, all substantially built of brick and tile; and on the south-east side of the town he has built a very handsome mansion-house for his own residence. It is a large, elegant, modern structure, after a design on Mr. Pain's architecture. He has raised various beautiful plantations, particularly the shrubbery on the south side of the house, planted by a piece of water, under a semicircular rocky mount, on the top of which is a neat little tower, with port-holes; at an agreeable distance to the south-east, near a Chinese cottage, is an opening between two hills, through which is discovered a prospect of the sea.

Belford has a weekly market held on Thursdays, and two annual fairs, viz. on Tuesday before Whit-Sunday, and on the twenty-third of August, for horned-cattle, sheep, and horses.

A mile south-west of the above town is an encampment, nearly square, with a wide foss, and a double rampier, the entrance into it is to the north-east.

Five miles north from Belford, and to the left of the post-road, is Kiley, the villa of Eustace de Kiley; in which in the beginning of the reign of king Henry VIII. the studs of a knight's belt, and the hilt of a sword of massy gold, were found between two stones. They became the property of Dr. Ruthall, bishop of Durham. This villa is situated on an eminence, from which it has an extensive land and sea prospect. The church is in a field at some distance from it.

Opposite to Kiley, on the right hand of the post-road, is Lindisfarn, or Holy Island, which was a bishop's see, founded by Oswald, king of Northumberland. Aidan, a Scotchman, was the first bishop, and possessed that whole kingdom for his diocese. Historians have given him an excellent character. By his prudent conduct, and the unwearied pains he took in the ministry, he acquired universal esteem. His country idiom not being understood

understood by a Saxon audience, the king himself became the interpreter of his discourses, which had such an influence, that innumerable numbers thronged to him to be baptized. Nor is this to be wondered at, since, besides the advantages of his own eloquence, his humility and condescension, uncommon assiduity and humanity, he had the example of a benevolent and pious king, and the countenance of the highest and best men of the court. Aidan affected no state; he travelled on foot, not by necessity but choice, in order to engage the attention of the pagans, and induce them to embrace and love christianity. His care for the poor was so remarkable, that he was continually soliciting the rich to become their patrons and benefactors; using every method in his power to gain them favour, procure them relief, and place them above misery and distress. After filling the episcopal chair of Lindisfarn for seventeen years, he paid the debt of nature on the thirty-first of August, in the year 651, and was succeeded by Finan, of the same monastery. This bishop received orders from Gregory, the Roman Pontiff, to remove his see to York; but he disregarding the pope's commands, continued it here, preferring the mode of government in the Eastern churches to that of Rome. Finan built a cathedral church, which he dedicated to St. Peter; and, after the Scotch manner, thatched it with reeds; but it was afterwards by another bishop covered with lead. His pains in making converts to christianity were indefatigable, and the success he met with amazing; for he was so fortunate as to gain two monarchs to embrace it, Penda, king of Mercia, and Segebert, king of the East Angles. He is said to have baptized these illustrious converts at Wall-town, now Walton, twelve miles from Newcastle. Finan, after having governed Lindisfarn ten years, died on the fourteenth of February, 661. He was succeeded in the bishopric by sixteen other bishops, the most considerable of whom was Cuthbert, who received his education in the monastery of Melro, under Eata, who had brought him with him to Lindisfarn, and settled him in that abbey. His modesty and humility were exemplary; his charity was unbounded, and his temper remarkably amiable; in short, he was not only a truly good man himself, but took infinite pains to make others so, and had the happiness to find his endeavours succeed. He was blessed with great elocution, and had a person remarkably handsome and graceful. Finding his health declining, and unable to sustain the weight of episcopal cares, he resigned his bishopric, after having held it only two years. He survived his resignation but two months, dying the twentieth of March, 687, at his hermitage in the island of Farn, and for his eminent virtues was canonized.

About the year 783, the Danish rovers made a descent upon the island, cruelly used the monks, many of whom they put to death, and after having robbed, burnt their monastery. The abbey church was, however, spared; and the bishop with some of his clergy escaped unhurt. In the year 875, the Danes made another descent, under their famous general, Halden, who in that year made an entire conquest of Northumberland, set a king or viceroy over it, whom he dethroned the next year, and divided his kingdom among his officers, which had lasted three hundred and thirty years, from the time of Ida, the first king. The bishop on the first news of their approach, fled with his clergy; carrying with them St. Cuthbert's bones, which they were desirous of preserving, and what other things they could of most value. They wandered from one place to another without any settled habitation, for the melancholy space of seven years. At length they fixed themselves at Chester-le-street, then called Craig, and by the Saxons, Concestre, from its situation on the river Con, five miles from Durham, and seven from Newcastle upon Tyne. Here the bishop enlarged his diocese, by adding to it the vacant one of Hexham, which had been without a bishop for the space of sixty-three years. Both now go under the name of the bishopric of Lindisfarn. From this time the religious remained in perfect tranquillity till the year 955, when the Danes infesting this diocese, the bishop and his clergy thought it prudent to remove for

their security, with the remains of St. Cuthbert, to Rippon, where they staid only four months; when hearing all was quiet again, the bishop purposed returning with his clergy to Chester-le-street, but a dream which he had on the road occasioned him to change his resolution, and settle at Durham, where his successors have ever since continued; and many of them been shining ornaments both to learning and religion. Their revenues became immense, from the pious munificence of those who held episcopacy in veneration. The following account of some of their gifts will serve as a specimen.

King Hardicknute gave all the land lying between the river Tees and Tyne. King Canute gave Stainthorpe and Raby. King Ethelstan gave South Weremouth, with eleven villages, besides many church ornaments to his clergy. Stire, a nobleman, gave the lordship of Darlington, with its appurtenances, and two plowlands in Lumley. Swaculph, son of Kikell, gave the lordships of Bradburg, Morden, Griseby, cum saca et facna. King William II. gave North Allerton. Bishop Walcher gave Jarrow. Tillcred, abbot of Heffereham, gave South Yoden; and bishop Egfrid gave the church and village of Norham. King Egfrid gave Chester-le-street.

St. Cuthbert's shrine had this privilege, that whoever fled to it should be safe for thirty-seven days.

Such were antiently the powers and revenues of this bishopric, called St. Cuthbert's Patrimony. It is still believed to be the best in England, being a principality, vested with a large regalia, erected in times of confusion and rebellion, for the security and defence of the borders.

The monastery occasionally mentioned, of Aidan's foundation, was under the government of the bishops. The abbot and monks were the cathedral clergy. The cathedral and the neighbouring village of Fenham, the village and church of Norham, with other possessions, were given by William de Carilepho to the monastery of Durham. Here was afterwards a cell of Benedictine monks, subordinate to that priory, which was inhabited by many religious, both Scotch and English. Ceowalph, king of Northumberland, abdicated his throne, and became a monk in this island; but he could not live in the austere manner that the rest did, but indulged himself in drinking ale and wine, which they were obliged to allow him. This opened the way for the same allowance to the other monks, which was at length changed into scenes of riot. In the reign of Henry VIII. many accusations were brought against the monks of this island, not only upon this account, but for their lewdness. The revenues of this monastery were valued at the dissolution at forty-eight pounds, eighteen shillings and eleven-pence, *per annum*.

The cathedral has been a splendid structure, of which there are still some remains. Two towers are standing, also three isles, with their beautiful pillars and arches, built with red free-stone.

On the west side, and within a few yards of the above fine cathedral-ruin, is the parish-church, dedicated to St. John, consisting of three isles.

The village is chiefly inhabited by fishermen. To the north-east of it is a garrison commanding the harbour; and at ebb tides, both horse and foot may come from the main land to the island. Bede very justly observes that it is twice an island, and twice a continent in twenty-four hours, it being every tide encompassed with water. It derives its name of Lindisfarn from its situation by the ostium of Lind-rivulet, and the Celtic *Fahern Recessus*. Egelwine, bishop of Durham, to escape the vengeance of king William I. after the defection of Northumberland, in the year 1069, retired to it with his clergy for security, carrying with them the church-treasure, the jewels, and the body of St. Cuthbert, where they remained upwards of three months. It gives its name of Holy Island to a considerable tract of country on the coast called Holy Islandshire.

The next we visited was Berwick upon Tweed, situated on the banks of that river, three hundred and thirty-nine miles from London. It was originally called Aberwick, a word which in the ancient British tongue signifies

signifies a fort at the mouth of a river: but according to others, it was called by the Saxons, Beornicawic, which signifies the town of the Bernicians, this part of the country being anciently called Bernicia; others again derive the name from Berwica, which signifies a corn-farm, there being great plenty of grain in the adjacent country. Berwick is pleasantly situated on the south side of an easy declivity, on the north coast of the river Tweed, about half a mile from its conflux with the sea, three hundred and thirty-nine miles north by west of London, and fifty-three south-east of Edinburgh. Indeed it is not properly in this county, or even in England, for in acts of parliament, and in briefs, it is always distinguished from England, as a town separate, both from this kingdom and from Scotland. It formerly belonged to Scotland, and was the chief town of a county in that kingdom, still called Berwickshire, and was one of the four towns, in which the convention of the royal boroughs of Scotland were held. It was first taken from the Scots by king Edward I. and has been several times taken and retaken by both nations; but ever since the reign of Edward IV. it has been in the possession of the English. The language and laws of its inhabitants are, however, a mixture of Scotch and English. It has had several charters, some of which are as ancient as the reign of Henry V. but the inhabitants were incorporated by king Charles I. and are governed by a mayor, four bailiffs, a recorder, and a common-council.

The corporation enjoys a court leet, and view of Frank-pledge of all the burghesses, inhabitants and residents within their jurisdiction. The mayor has the custody of the gates, posterns and wickets. But the crown has reserved to itself the castle, built on the town wall; all the edifices and buildings belonging to it; the water-mill near the wall, commonly called the Castle water; all the lands, tenements, closes, and other hereditaments, called by the names of the inner-castle hills inclosed, and the outer castle hills, not inclosed; together with several other lands, meadows, &c.

Berwick, which is now a town and county of itself, had once a famous castle, now in ruins, but is still inclosed with a wall, erected by order of queen Elizabeth; and is further strengthened by its situation, being almost encompassed by the river and the sea. The barracks form a large regular square, near which is the parade where the troops are exercised.

It is a large, well-built, populous town, and has a beautiful bridge over the river Tweed, consisting of fifteen arches, and is nine hundred and forty-seven feet in length. The church is large and capacious, and famous for the marriage of Joan, the sister of king Edward III. with David Bruce, king of Scotland. The bridge leads to a suburb called Tweed-mouth, where there is another church. Between the town-wall and the castle is another suburb, called Castlegate. It has also an exchange, and a good town-house, built of white free-stone, a lofty turret, in which is a ring of eight bells, and a large clock, with four dials.

The harbour is but indifferent, and navigable for vessels only to the bridge, though it is within a mile and a half to the bar, and the tide flows four miles and a half above the town. There is not above thirteen feet water on the bar; nor is there any good riding near it in the offing.

Berwick has a free-grammar school, founded by queen Elizabeth, a charity-school, a considerable manufacture of stockings, and a great salmon-fishery.

Some corn and eggs are exported from Berwick to London; but the principal trade of the inhabitants consists in the salmon, caught in the Tweed, and reckoned the best in England. Large quantities of this fish are pickled, put up into kits, and shipped off for London. During the months of June and July, the best fresh salmon may be bought at Berwick for a penny a pound. Many of the smaller fish are sent to London alive, in smacks built for that purpose; there being a well in the middle, bored full of holes for the free passage of the sea-water, in which the fish are conveyed without injury. These vessels are esteemed very safe for

travellers, on account of their lying nearer the wind, and bearing heavier seas than any other.

Sir John Grey founded a monastery in Berwick, in the year 1270, for White-friars, one of the four orders of friars mendicants. They officiated in the king's chapel belonging to the castle, for which they had the usual salary given them by the crown. Before the year 1291, here was also a house of Preaching friars.

An hospital dedicated to St. Mary Magdalen in this town is mentioned in the reign of king Edward I. and the master and brethren of God's-house are mentioned, as being settled in this town about the second year of Edward III. Here was likewise a house of the order of the Trinity, which being destroyed by Anthony Beck, bishop of Durham, another house of the same order was built by William and Laurence Acton; but the religious were afterwards removed to Newcastle. At South Berwick, near Berwick upon Tweed, David, king of Scotland, founded in the twelfth century a Benedictine nunnery. And at Tweedmouth, which is considered as a suburb to Berwick, was an hospital, the mastership of which was in the bishop of Durham.

Berwick sends two members to parliament; has two weekly markets, held on Wednesdays and Saturdays, and an annual fair kept on the Friday in Trinity week, for black cattle and horses.

From Berwick we continued our course westward for six miles, and come to a pleasant village called Norham, or situated on the Tweed, near the mouth of the hill, where was a castle built by Ralph Flambard, bishop of Durham, on the top of a steep rock. It was moted round, and erected to preserve his diocese from the frequent incursions of the Scotch moss-troopers. In the outermost wall, which was the largest in circuit, were placed several turrets towards the river, and within this wall was a second of much greater strength, which had in the middle of it a high keep. This castle is now gone to ruin, it being of little use since the union; however, those parts of the wall that are still remaining, shew that it was a regular, strong, well built castle. At one end a large tower is pretty entire. Egfrid, bishop of Lindisfarn, built a noble church on the north side of this village, no remains of which are now left standing except the middle isle; at the east end of which the foundations of a building were lately discovered, and a stone found with an inscription in Anglo Saxon characters. Above it in a niche is the effigy of St. Peter, with the keys; another of St. Cuthbert, and a third of king Ceolwulph holding a scepter; the three patrons of Norham-church. On the reverse is an inscription in Runic characters.

On the ravage of Lindisfarn by the Danes, the body of St. Cuthbert was removed hither, where it remained till the time of king Ethelred. The village consists chiefly of one long and wide street.

A mile below Norham, the Tweed forms an island of fourteen acres, by a den, called St. Thomas's Den. A little to the west of it is a lofty terrace above the Tweed, where it forms a kind of serpentine canal; on the other side of which is the seat of James Ker, of Ker's-field, Esq; and near it a craggy cliff inaccessible to human feet.

Near half a mile further down the river, on the left hand of the road, two small urns were lately found in a gravel pit, called the Crooks, and near them several human bones. One of them is now in the possession of Francis Blake, of Twizell, and the other of Henry Collingwood, of Cornhill, Esqrs.

Half a mile from the Crook is Twizell, the seat of the above-mentioned Francis Blake, Esq; who lately repaired it, and made considerable additions and improvements to the house, chiefly in the Gothic stile. Near it in a winding stream flows the river Till, over which is erected a stone bridge, consisting of one strong and beautiful arch, nearly semicircular, ninety feet seven inches, from base to base; and in height from the battlement, forty-six feet two inches. Before the house is a range of rocks, carvenase, fringed with various petrifications of moss, and other small plants, formed by the drippings of water from the roof and crevices.

In one part of it is a natural alcove, with moss-plants on its sides, beautifully variegated and gilded by those petrifying drops. In the center is a short, upright stone, in party-coloured, lapideous clothing. Through the arch of the bridge you have a fine view of a sloping bank of hawthorn. The north-west side of the bridge is adorned with large quantities of pellitory of the wall; a little below the bridge, on the edge of the Till, is an upright rock of a great size, about twenty feet high, and gradually tapering to the top; near it is a fountain consecrated to St. Helen, by which is an antient sepulchre, supposed to have belonged to the family chapel.

A little higher up the Till is Helton, or Horton-castle, which for many ages was in the possession of a branch of the family of Grey, of Chillingham, barons of Wark. Sir John Grey, of Horton, going into the war in France, with Henry V. took by storm the castle of Tankerville, in Normandy; for which service king Henry created him earl of Tankerville, and knight of the garter. The two families afterwards became united, and upon the death of Ralph, late lord Grey, the castle devolved to Henry Grey, Esq; It has nothing of the appearance of an ancient castle, except its being built with stone, in a somewhat antique manner. It was formerly a strong building nearly square. On the west side of it was a court, called the Lyons Court; on the north side was a vault in which a hundred horse might be contained; the whole of this noble fabric is now in ruins. King James IV. of Scotland, invested it with his army before the battle of Flodden-field, but failed in his endeavours to take it. It is now a very elegant country seat and belongs to the earl of Tankerville. In digging for stones, two wells were discovered by the workmen, in which were found four pewter plates, with part of the arms of the Greys engraved upon them.

Not far distant from hence are the ruins of Tilmouth-chapel, which appears to have been but small. The altar, window, and a basin in a nich of the south wall are still remaining. On the north side of the chapel the foundation of the minister's house is very conspicuous. The situation is most delightful, being on a peninsula sloping to the two rivers. On the west side of the chapel on the banks of the Tweed, is a remarkable curiosity, of a stone boat, as perfectly shaped as any which are now used; in which, it is said, St. Cuthbert sailed down the Tweed from Mebros to this chapel. It measures ten feet long within; three feet and a half in diameter, in the middle; eighteen inches deep; and four inches and a half thick.

Half a mile west from Tilmouth, a manor belonging to Francis Blake, of Fuizell, Esq; and on the left hand of the Berwick-road to Cornhill, is a stone cross, called Tilmouth-cross; below which, on the north side, is an intrenchment, nearly square, called the Holy Chesters; a great part of which is at present over-grown with furz.

Opposite to Linnel-house, and a quarter of a mile from Cornhill-bridge, on the brink of the Tweed, are the vestiges of a fort, trenched round, called the Castle Stone Nich, erected as a guard to the ford across the river. Cornhill-bridge is a modern structure, consisting of six arches of white free-stone. The parliament gave four thousand pounds towards the building it; and lord Home laid the first stone of the foundation in May 1763.

At a small distance from the bridge is Corn-hill, formerly the villa of William de Cornhill; and at present in the joint possession of Henry Collingwood and Francis Blake, Esqrs; A small, but neat church, stands nearly in the center of the village. It was lately rebuilt, and the roof cieled. In digging up the old foundations, two small urns were found by the workmen; but the real contents of them were never certainly known. In the church-yard is the following inscription on the tomb of an old man, an empyric, at Twizell:

Eheu! quis mortis jam retardabit falcem?

Archiater ille inclytus, ad pontem Twizili,

Jacobus Purdye, non vacat œgris.

Obiit ipse 4to die Decembris, A. D. 1752, et ætat.

81. Et cum

Conjuge Jana, nepte que Eleanora, sub hoc lapide tenetur.

At bono sis animo viator — fortasse vivas. Superstes Jacobo viget natus Samuel, sub patrio lare artes exercens

Patrias. Si quæris fanitatum, hunc adi.

The street from the church forms a wide avenue, at the bottom of which is Mr. Collingwood's seat; situated on the declivity of a hill. To the west of the house are the gardens, from a fine lawn, in which you have a beautiful view of the fertile vale beneath, through which the Tweed takes its course in a winding current. From a bank on the opposite side, you have a delightful and extensive prospect of several gentlemen's seats, bounded by Cheviot-hills.

A quarter of a mile south-east of Cornhill, is an incampment, the most remarkable of any north of the Roman wall, for extent, variety of military works, and covered ways: it is amazingly large and spacious, and contains numerous curvatures, defended by ranges of terraced hills, and a morafs at several angles and sides of the hills; many of them exploratory and sepulchral, of the usual conic figure; the hollows remaining, and filled with water, from which the earth was taken for raising them. They were the funeral repositories of the great chieftains of the Romans. The remains of the common soldiers are frequently dug up on the ridge of a hill, called Bleak Lands; they being buried without care or distinction.

Two miles west from Cornhill, on the banks of the Tweed is Wark-castle, which was once the barony of the ancient family of Ros barons, of Holmesley in Yorkshire; but in the year 1400, by an inquisition it was found, that the castle, manor, and village of Work belonged to Sir Thomas Grey, of Heton. It is at present in the possession of Charles, earl of Tankerville, whose seat is at Chillingham.

The castle is situated at the west end of the village, on a high mount of difficult access, circular, and seemingly raised by art of earth and stone. Part of the foundations are still remaining, and a fragment of the building, which at a distance has the appearance of a column: some courses of the outer-wall on the north side, which are of ashler work, are still entire: under it is a walk called the Maiden-walk; that is the Military way, or walk under the Maiden, or fortrefs. It is a beautiful terrace walk, five yards broad, and forty-eight yards long, delightfully shaded with trees; on one side, the river Tweed glides past it; and on the other is a steep precipice.

On the west side the castle are the out works, now called the Kemp; that is the camp of the militia designed to kemp or fight an enemy; Kemp being a word often used by the borderers when they threatened in a passion to beat an assailant—they will kemp him—that is drub him heartily.

This intrenchment is a mile and a half in length; the breast works and covered ways still fair and conspicuous, the ditches deep and the rampier high, formed of earth and stone. There are two small mounts at nearly an equal distance, one about midway, and the other at the extremity; each having a linear trench at the top, between the last mount and the river, is a third of the same form with the others; near the first is part of the foundations of a chapel, now known by the name of Gilly's Nick, from its situation by a port-way, and its dedication to St. Giles: there are many grave-stones about it, some standing, and others flat; over a Knight Templar is one large flat one, of free stone, on which is a cross sculptured between two swords.

On the south side of the rampier, near the castle, is a piece of ground, called, the Battle-place; opposite to which is terraced hills, called, Gallows-hill, being the place appointed for the execution of criminals; and a little to the west of it is a circular mount, called, the Gallows-hill-know; being the burial place of those executed. A few years ago as some men were digging they found a human skeleton interred within a few feet of the surface.

In the year 1383, the castle was burnt by the Scots; and in 1523 they besieged it under the command of the duke of Albany, Sir William Lisle being at that time governor. They crossed the Tweed in the night of Saturday the thirty-first of October, with a train of heavy cannon, with which they battered the walls till the second of November, when entering the town at the breaches they had made, they became masters of all the wards except the inner one, called the dungeon, which was bravely defended by Sir William and his garrison; and the earl of Surry coming up to their relief, they slew three hundred of the Scots, besides those who were drowned, and such of them as died of their wounds. It was at that time reputed a strong fortress. A few years ago, a cannon was found among some rubbish.

Near a mile west of Wark, is Carham-hall, the seat of Anthony Compton, Esq; delightfully situated on the banks of the Tweed. It is a handsome modern building, to which Sir Anthony has made considerable additions; and also great improvements to the plantations. From hence there is a fine view of the village of Carham, situated higher up the river, at the west end of which was formerly an abbey of Black canons, subordinate to the priory of Kirkham, in Yorkshire. In the year 1370, the Scots being on the point of crossing the Tweed at this village, laden with the plunder of the English, were attacked by Sir John Lilburn and his brother; who, after a long and obstinate engagement, were both made prisoners. The village of Carham is small, but well built; and surrounded with many plantations of young forest-trees. The church, which is small, has been lately repaired. At the north-east end of the village is a neat and convenient house, built of stone, and partly hewn work, belonging to the minister; erected by the present incumbent Mr. Richard Wallis.

On the south side of the village is a small hamlet, belonging to Mr. Compton, situated on a hill, called, Shidlaw, a contraction of Shield-law. It was formerly a guard-hill, and exploratory; from which is an extensive and beautiful prospect into Scotland. A mile above Carham, a streamlet, called, Ryding-burn, empties itself into the Tweed, which is the boundary to the west between the two kingdoms of England and Scotland.

About two miles to the southward, from Comhill, on the Etall road, is a large upright pillar of whinstone. It measures six feet seven inches in diameter towards the base; and was erected as a memorial of the great victory obtained over king James IV. of Scotland, by the earl of Surry, on Friday, the ninth of September, 1513, and in the fifth year of the reign of king Henry VIII. This battle is called the battle of Brankeston, from the chief scene of action being near that village; it is also called the battle of Floddon, from the Scotch entrenchments being on Floddon-hill, from whence they were artfully drawn to an engagement, by the earl of Surry's cutting off their retreat. Among the slain was their sovereign, with his natural son, Alexander, archbishop of St. Andrews, two other Scotch prelates, four abbots, twelve earls, seventeen lords, a great number of knights and gentlemen, and about eight thousand, or as some say, twelve thousand common men. King James fell near Brankeston, where he was the next day found by lord Dacres. On the summit of Floddon-hill, is a natural rock, called the king's chair, from whence he had a good view of his own and the English army, and for that reason used frequently to set there.

The day after the battle, the standards, and twenty-two pieces of ordnance, taken from the Scots, were carried by the victors to Etall, among which were seven, remarkably handsome, and for that reason called the Seven Sisters.

We next pass through the village of Crookham, where the dissenters have a handsome meeting-house. From hence crossing the river Till at the Willow Ford, we come to Etall, a pleasant village, anciently one of the manors of the barony of Woller, but at present the seat of William Carr, Esq; father-in-law to the earl of Error. His seat is at the east end of the village, and lately rebuilt after a genteel design. The south front

appears to great advantage through an avenue of trees, as you approach it from the castle of ford. Before the front is a flower-garden, lawns, gravel walks, edging of flowers and shrubs, surrounded by a dwarf hedge of holly. The street of the village forms an avenue from the west front of the house to the ruins of the old castle on the banks of the Till. These ruins have a very pleasing appearance, there being two large towers still remaining.

Four miles from Etall is a remarkable hill, called, Watch-law, once an epulatory, whence they observed the motions of an enemy, and on their appearance alarmed the adjacent country, by setting fire to the beacon. From the summit to the base, the ground forms, on all sides, a regular and beautiful Hope. The prospect from the top is at once both extensive and beautiful, especially that towards the sea, the coast of Scotland being seen to a considerable distance.

A mile from Etall is another village, called, Ford, situated on an eminence on the east side of the Till. It consists of one irregular street, on the north side of which stands the castle; lately repaired after a very handsome manner; from the battlements you have a variety of fine views, particularly one, of the winding course of the river below, the bridge over it, and the improvements made on its banks; of the neighbouring plain, the inclosures, tillage; and plantations on divers little eminences; the whole beautifully terminated by several ranges of the neighbouring hills and mountains, on the tops of which are ancient karns and intrenchments.

At Broom-ridge, in the same parish, and a mile south from the village, are the lines and intrenchments of that brave monarch, king Athelstan, who obtained a complete victory over the confederate forces of Constantine king of Scotland, Eugenius, king of Cumberland, and Anlaf, the Dane, in the year 928. In this battle king Athelstan lost his two near kinsmen, Elwin, and Ethelstan, both remarkable for their valour. Constantine escaped into Scotland; and Anlaf, to Dublin.

At Ford we crossed the river Till by a stone bridge of one large and strong arch, and come next to Milford, a small village, where the Saxon kings of Bernicia, after the death of king Edwin, sometimes resided. On the south side of it is a spacious and beautiful plain, long since overgrown with broom; and rendered famous by the defeat of a large party of the Scots, before the battle of Brankston, by Sir William Bulmer, of Bramspeth-castle. Five or six hundred of the Scots, who had concealed themselves among the broom, were killed, and four hundred taken prisoners. They afterwards, with great reason, christened the road through the plain, The Ill Road.

About two miles south-west from Milfield, and on the north side of the rivulet of Glen, is Copeland-castle, or North-Copeland, formerly the seat of the ancient family of the Wallaces; and now in the possession of the Rev. Dr. Newton Ogle, or Kirkley.

On the south-west side of the Glen, and in view of the castle is Yevering, a mean village, which that learned antiquary, Dr. Gale, imagined to be the Roman station Glanoverta; but no Roman antiquities of any kind whatever have hitherto been discovered to favour such an opinion; which is founded on its situation by Glen; from which the vale of Glendale derives its name. It was a royal manor of the Saxon kings, called, by Bede, Ad Gebrin, at which they usually resided, till they removed to Melmin or Milfield. It was also the residence of king Edwin and his queen Ethelburga, for thirty days after their conversion to the Christian religion, by Paulinus, who attended them in this retreat. Edwin was afterwards slain by Penda and Cedwall, two tributary princes; upon which his queen fled for refuge by sea to her brother, Eabald, king of Kent, who took her under his protection, and created Paulinus bishop of Rochester.

In the year 1415, on St. Mary Magdalen's day; the Scots were defeated at this village, after a long engagement, by Sir Robert Humfravil, captain of Roxbrough-castle; the earl of Westmorland being at that time lord warden of the marches. The Scotch in this engagement had above sixty of their men slain, and one hundred

hundred and sixty taken prisoners. On the south side the village, midway between the hill and the road leading from Kirk-Newton to Woller, is an unwrought column of whinstone, erected in memory of this battle, of an immense magnitude; measuring in height, fourteen feet, four inches; at the base of the diameter as many; and towards the middle, eleven feet seven inches.

About two hundred yards west from this column, is a high hill, which from its being shaped like a bell, is called Yeving Bell. On the east side of it is a karn, with a circular trench; and many circular foundations of buildings upon the sides of both; the whole encompassed with a wall of whinstone of a great breadth and length, but very much decayed; it appears to have been the work of the pagan Danes, for their priesthood and nobles to assemble in, for legislation, devotion, and sepulture.

At the distance of half a mile south-west from Yeving-Bell, is another karn, composed of a large conic heap of small whinstones. It is called Tom Tallon's grave. And a little to the east of it is a cluster of broken rocks, called, from its situation, Tom Tallon's Crag.

In the neighbourhood of this karn are three others; one situated on the top of Newton-Torr, another on the top of East-Torr, and a third on the top of West-Torr, three hills formerly sacred to the pagan god Thor, or Jupiter. There is also a karn on the western point of Cheviot; and another upon Whitelaw-hill, about a mile south-west of Yeving-Bell.

Two miles from Hevering, in the road to Woller, is Hambleton, a small village situated on an eminence, at the foot of which Henry, lord Piercy, surnamed Hotspur, and George, earl of March, obtained a signal victory over Archibald, earl of Douglas, on Holyrood-day, in the year 1402. By the side of the road, under Hambleton-Banks, is an upright pillar of whinstone, erected in memory of this remarkable event. The pillar is six feet, six inches and a half in height, and twelve feet in diameter.

On the declivity of a hill near Hambleton-burn, is an ancient intrenchment, called, Green-castle; and on the top of Hambleton-hugh, a pretty lofty hill in the neighbourhood, is a circular intrenchment and a karn; both of them the work of the Danes.

A poor woman of Hambleton, wife of Thomrs Rutledge, a day labourer, was, on the thirty-first of March, 1764, delivered of four children, three girls and one boy, who all lived to be baptized. The year before she had two children at a birth.

Two miles to the southward of Hambleton, is the small market town of Woller, situated on a rising ground near a trout stream, three hundred and twenty-seven miles from London.

The market place is in the center of the town, and the church has been lately rebuilt. It has a weekly market on Thursday, and two annual fairs, viz. April the twenty-sixth, and October the sixth, for black cattle, sheep, and pedlars ware.

On a round hill are the ruins of an old tower, and near it was formerly an hospital dedicated to St. Mary Magdalen.

About six miles from Woller is Chillingham-castle, formerly the seat and manor of the Greys of Wark, but now in the possession of the earl of Tankerville. It stands on a rising ground, and is kept in good repair. In one of the rooms on the ground floor is a marble chimney-piece, in which a live toad was found, when the block was sawn asunder. The nidus of the toad was visible, till the late lord Tankerville caused it to be plastered over.

The church, which stands on the north side of the castle, is dedicated to St. Peter. At the north-east end of the chancel, is a beautiful raised tomb of alabaster, in memory of one of the Grey's and his lady, with their effigies recumbent, and in a praying posture. The whole is curiously ornamented with sculptures of the holy family in niches. Above it, on blue marble, is his coat of arms, with the following motto in French:

“De bon valloir, server le roy.

At the head of Chillingham-park, on the summit of a rocky eminence, is a double intrenchment, called Ros-castle; and at the bottom of Hebburn-wood, at the distance of a mile south from Chillingham, is another of the same form.

At New Town, a mile west from Chillingham, is a stone cross, called by the common people, The Hurle-stone; and a mile from New-Town, is a village called West Lilburn, the seat of the ancient family of the Lilburns. It stands on a rising ground on the east side the Woller-road, and on the north side of a small stream. At the west end of the village are the ruins of an old tower and chapel; and at the east end is Mr. Collingwood's seat, a neat, modern building.

Three miles from hence, on a rising ground, to the right of the road, is Ilderton, a small village, formerly one of the manors of the barony of Wark; but at present in the possession of Thomas Ilderton, Esq. On the south side of this village, on a place called Rosedon-edge, is a large square intrenchment; near which, on the east side of the rivulet of Bramish, upon Berwick-hill is another; but of a semicircular form, with a double foss and vallum; to the west of it is a steep precipice, from the top of which, on a clear day, may be seen a very beautiful and extensive prospect. A hollow way leads to it from the south, twelve feet and a half broad, edged on one side with large rag-stones, placed edgewise in the earth.

On the left hand of the road on Hedgley-moor, is a stone pillar fixed on a pedestal, and called Piercy's-cross from its having been erected to the memory of Sir Ralph Piercy, who was slain in a battle with lord Montacute, in the year 1463, before the battle of Hexham-field.

A little beyond Piercy's-cross is the rivulet of Bramish, over which there is a good stone bridge; near which on the right hand is Branton, a small village, supposed, by Dr. Gale, to be the Roman station Bremenium, which later writers have fixed at Roehester in Reedf-dale.

On the right hand side of the road is Glatton-hill, on the top of which is Glatton-pike, an exploratory mount of a conic form, on which was once a beacon to alarm the country by fire, in times of public danger. The prospect from the pike is very extensive; in a clear day, the hill called Dun's lane, in Scotland, may be seen from it.

At Bolton, a small village on the river Aln, an hospital was founded some time before the year 1225, by Robert de Ros, baron of Wark, for a master and three chaplains, thirteen leprous men, and other lay-brethren. It was dedicated to St. Thomas the martyr, and subordinate to the abbey of Ryevall, and the priory of Kirkham, in Yorkshire. The founder gave it the village, lordship, impropriation and advowson of Bolton; a waste of one hundred and forty acres; a corn mill, and a tenement at Mindrum; lands at Pafton and Rilham; the village, manor and impropriation of Straunston; and his estates of the two Pauntons in that lordship, near Grantham in Lincolnshire: besides several other estates in Yorkshire. The master, chaplains, and brethren of the hospital were enjoined to keep a good table, dress neatly, and provide themselves with all necessaries and conveniencies out of their annual revenues, and apply the remainder to the relief of the poor and helpless strangers. It is now the seat of Matthew Forster, Esq.

On an eminence two miles from Bolton, is Lemington, the seat of Robert Fenwick, Esq. It is a handsome, modern structure, of white free-stone, and from the west front is an agreeable prospect of the vale of Whittingham; and from the east of a noble plantation on the brow of a hill.

About a mile and a half from Bolton is Essington, the seat of lord Ravensworth. It is a handsome structure, built in the modern taste, and situated on the north side of the Aln, which forms before it a canal of a considerable length. Between this piece of water and the house is a grass town, and on the opposite bank of the canal, slopes of flowering shrubs. On the south side of the road, on a rising ground, is a thriving planta-

tion of forest trees; and above it a terrace extending east and west, from which is a delightful view of hills, vales, and rocky eminences, with an opening to the east beyond a wide wood, well cultivated and terminating the prospect.

A mile south from Eftington, is Calleley, formerly the seat of William de Calleley, in whose family it continued many years; but at present Calleley and Yetlington are in the possession of Ralph Clavering, Esq;

Calleley is on the south side of a stream of the same name, in a low situation, adjoining to an old tower. This gentleman has made many handsome additions, particularly a large elegant dining-room; and two music-galleries. The stream takes its course between two slopes, on one of which, to the north, is the garden; and on the other to the south-east, an octagon-grove, called the Star; between which, and the house is a paddock of deer. At a small distance to the south-east, is a high conic hill, called Castle-hill, on which is a circular intrenchment, with vestiges of buildings; and an extensive prospect from it of the vales of Coquet, Whittingham, and Glendale.

A mile west from Calleley is a village, called, Little-Ryle; which, together with the seat in it, belonged formerly to a younger branch of the family of the Collingwoods. Lady Charleton, one of the family, founded and endowed it with small alms-houses for four ancient poor widows belonging to the parish of Roxbury. The manor house is an old tower, now possessed with part of the village by Giles Alcock, of Newcastle upon Tyne, Esq; It stands on an eminence, from whence there is a good view of

Bittleston, once the seat of Sir Walter Selby, governor of Lidell-castle; and now belongs to Thomas Selbye, Esq; This seat is pleasantly situated on the summit of a gradual slope; behind it runs a stream, which falls at irregular distances, from large rocks in a winding course through a deep gill, overlooked by the high hills of Snowdon, Silverton, and Hardon; from the two last of which, on a clear day, is a view of the sea. To the east of the house is the garden, in which is a flue-wall of brick, one hundred and one yards in length; a fine prospect from it of the pleasant vale of Coquet, terminated to the south-east, south, and south-west, by a semicircular ridge of hills; in the center of which stands Simonside-hill, overlooking the rest.

Three miles from Bittleston, on the banks of the Coquet, is Clenell, the seat and manor of the ancient family of the Clenell's; a mile below which, on the south side of the Coquet, is Harbottle-castle, which was antiently held by the Humfravils, barons of Prudhow, by the service of keeping Reedsdale free from thieves and wolves. The castle and manor of Harbottle, are now in the possession of Percival Clenell, Esq; The castle, which is now much decayed, stands on an eminence, overlooking the river Coquet. In the reign of Edward I. it was so strong, that the Scots in their march through Reedsdale to Hexham, in the year 1296, besieged it in vain for the space of two days. It was also a considerable castle in the time of Henry VIII. who, in the year 1515, made choice of this as a proper place for the retirement of his sister, Margaret, queen dowager of Scotland, after her marriage with Archibald Douglas earl of Angus.

A mile below Harbottle-castle, on the same side of the Coquet, is Halystone, a small village, where Paulinus is said to have baptized many thousand Saxons, on their conversion to Christianity. Here was a priory of six or eight Benedictine nuns, founded by — Hunfravil, of Harbottle-castle; who gave them the village, impropriation and advowson of Halystone. They had likewise the impropriation and advowson of Allenton, near Harbottle-castle, where they had an hospital; with many other grants and privileges, all which were confirmed to them by king Henry III. though at the time of the dissolution, their annual revenues were valued at no more than eleven pounds, five shillings and sixpence.

On the hill between Thropton and Rothbury is a circular intrenchment, with a double foss and rampier,

called, Old Rothbury. It is thought to have been thrown up by the ancient Britons, and was long used as a place of refuge in public danger, before the union of the two kingdoms, and a nightly watch was established there.

The little market town of Rothbury stands about a mile from Old Rothbury, and two hundred and eighty one miles from London. It is situated in a low, but romantic situation. The Coquet passes through part of the town, and is there crossed by a neat stone bridge of three arches. To the west of the town is a beautiful valley, almost enclosed with hills and ridges of broken rocks.

The market-cross is nearly in the middle of the town, which consists of three irregular streets. The church is built in the form of a cross, and dedicated to All-Saints. The pavement within the communion rails is of chequer work, formed of white free-stone and blue marble. Against a pillar by the south door is the effigy in relieve of a man dressed in armour, with a pistol in one hand, and a powder-flask at his belt. Near it is a funeral monument to the memory of George Fletcher, Esq; who left six pounds, *per annum*, to the free-school of Rothbury. And on the north side of the chancel is a mural monument in memory of the Rev. Mr. John Thomlinson, some time rector of the parish, and who at his death left twenty pounds a year to the free-school, and one hundred pounds for building the school-house. Here is a weekly market on Thursday, and three annual fairs, viz. Whit-Monday, Sept. twenty-one, and Thursday before All-hallows day; for horned cattle, linen and woollen cloth.

Three miles from Rothbury is Brinkburn priory, founded by William de Bertram, baron of Mitford, in the reign of Henry I. and dedicated to St. Peter. He placed in it black canons of the order of St. Austin, from the monastery of St. Mary de Insula. It is situated under a hill, on the extreme point of a peninsula, on the northern bank of the river Coquet; bordered on the other side with a semicircular ridge of shaggy rocks, covered with ivy, and a variety of plants and shrubs, which add greatly to this agreeable solitude.

Great part of this venerable pile, together with the church, built in the cathedral form, were several years ago demolished, and the stones used in building a dwelling house: but the large square tower of the church, a small spire or steeple, many noble pillars and arches, some of the side walls, and the dormitory, are still standing.

Six miles south of Rothbury, the road crosses the rivulet of Font, over which there is a stone bridge of one arch; and from the brow of the hill, above the small hamlet of Ewslee, is a prospect of Nether-Witton, the seat and manor of the ancient family of the Thornton's. The old castle is now in ruins. The present seat is a genteel, modern structure of white free-stone, with a flat roof. Before the south front is a grass lawn, and between that and the river of Font, is a paddock of deer. At the south-west corner is the parochial chapel; and on the east a declivity covered with a fine plantation of trees. The bank of both sides of the rivulet are beautifully shaded with trees.

To the east of Nether Witton, on the same side the rivulet and situated on the brow of a hill, is Stanton, formerly the seat of the younger branch of the family of the Fenwicks, of Fenwick-tower, and now in the possession of William Fenwick of Bywell, Esq; From the top of the hill, called, Liniel-Law, above Ewslee, is an extensive land and sea prospect; and at the foot of the hill, on the right hand, is a semicircular lake, between two young plantations; a rill entering it from the north, called White-Den-Sike.

From the lake we ascend a hill, called Codgey-Crag, which brings us to a large plantation on the left hand, and a park, called Rotheley-park, well furnished with deer and game. In it, on a rocky eminence, is an artificial tower; near the entrance of which are two jaw-bones of a whale, seventeen feet six inches long, and two shoulder-blades of the same fish, three feet six inches long, and three feet broad. By the road side,

and near the tower, is Rotheley, a small, but well-built, pleasant village, situated on a rising ground, belonging to Sir Walter Calverley Blacket, Bart. who built the tower, raised the plantations, and formed the semicircular lake before mentioned in imitation of nature.

Two miles to the east from Rotheley, we have a view of Long Witton, an irregular village situated on an eminence, at the east end of which is the seat of William Swinburn, Esq; a neat structure, well sheltered to the north by tall forest trees; on each side the house is a plantation, and shrubbery; and before it to the south is a grass lawn, from which is a most beautiful and extensive prospect. From the lawn is a pleasant walk southward of about a mile in length, which leads by a gradual descent to a neat garden, under a bank of oaks by the side of a rivulet; towards the middle it is crossed by a small rill, called the Den-Burn; by the side of the rivulet is a grass terrace; and the opposite banks are covered with brush-wood. The garden is well furnished with fruit by means of a hot-wall, which extends an hundred and fifty yards. The gardener's house, which is of grotto work, and neatly finished, is pleasantly situated on the brow of a hill, by the road side, and overlooking the garden. Below it, to the north-east, is a winding path through the bank of oaks to a ridge of rocks, under which are three medical fountains, called, Thurston-wells.

A little lower down, the rivulet is crossed by the Roman causeway, vulgarly called, the Devil's causeway, a branch of the Hereman-street, which appears very conspicuous for a considerable way, in a pasture by the road side above the hill. On the south side of the rivulet, by the causeway, is a bank of wood belonging to the vicarage of Hartburn, cut into many agreeable walks. On the edge of the rivulet is a grotto hewn out of a rock; some pleasing objects are let in here and there through the trees, such as a falling stream, the Gothic tower and church at Hartburn, the rocks by Thurston-wells, and Mr. Swinburn's seat of Long Witton. This romantic solitude was formed by the present incumbent, the Rev. Dr. Sharp, archdeacon of Northumberland.

We now passed on by means of a new stone bridge of one arch, from Rotheley to Harterton-Burn, and from thence came to Camhoe, that is, the camp or fort on the hill, which was formerly the seat of Sir Robert de Camhoe, but is now in the possession of Sir Walter Blacket. It is a small, well built, pleasant seat, with gardens and inclosures before it on gradual slopes, and a prospect from it of the sea.

Near a mile from Camhoe is Wallington, antiently one of the manors of the barony of Balbeck, but at present another of the seats belonging to the above-mentioned Sir Walter Calverley Blacket. The house is a large handsome modern structure, of white free-stone and hewn work; and from the disposition of the apartments appears to be very convenient. We were first shewn into some common keeping rooms, a library, dining-parlour, &c. in which we remarked a piece of dead game, by Hubener, extremely well done; and another of dancing dogs, truly grotesque. In the dining-room, which measures forty feet by twenty-one, the chimney-piece of white marble is very handsome; and the ceiling of stucco work in scrolls, very light and pretty. Here is also another piece of dead game by Hubener, some of it well executed, and a needlework screen of tent-stitch, very elegant.

The saloon is forty feet by twenty-two, of a good height, and in every respect a most elegantly proportioned room. The ceiling and the whole very neatly worked in stucco; the former coved, the center an oblong of mosaics, and the cove, scrolls and festoons. The chimney-piece is very elegant, of statuary marble polished: in the center, boys gathering grapes, in relievo. The furniture of this room is remarkably handsome. There are two slabs in it of very beautifully veined marble, or composition, and under them very fine China jars. In one corner of the room is a noble China cistern. The two girandoles of gilt carving for

several candles, are exceedingly light and elegant; and the china jars on the chimney-piece, very fine.

The drawing-room is thirty-four feet by twenty-two, hung with silk and worsted crimson damask. The ceiling ornamented in stucco, with light scrolls, surrounding a center of boys emptying a cornucopia. The chimney-piece of polished white marble, with festoons of grapes, &c. Over it a landscape, architecture and trees, in a light, glowing, brilliant stile; extremely pleasing, though not perfectly natural. The slabs are very elegant, the glasses large, and the frames of both very neatly carved and gilt.

The dressing-room and bed-chamber are both handsome rooms; the former twenty-one feet square, and the latter twenty-two feet by twenty-one.

To the east of the house is a large garden, in which is a pinery, shrubberies, pieces of water, plantations, and other ornaments. In front is a park-like field gradually sloping to the rivulet of Wansbeck, crossed by an elegant stone bridge of three arches. Above it is a small island, below which the rivulet falls in broken murmurs from artificial slopes of pebbles, forming a serpentine canal between them for a considerable space, in imitation of nature beautifully rural.

The new kitchen gardens are excellently disposed, kept in admirable garden husbandry, and the conveniency of water very great. The gardener's house is pleasantly situated on the banks of the river; and from several very neat bow window rooms, there is an agreeable view of three water-falls in the river.

Four miles from Wallington, on the left hand of the road, is Botham, a small irregular village, situated on a rising ground, in which is a small, but neat church. In this village is a square piece of ground encompassed with a double trench; in length one hundred and twenty yards, and in breadth eighty; and a raised post-way leading to it. It was originally designed as a keep or fort for the security of the town; which, tradition says, was antiently so large, that it consisted of two hundred slated houses.

The Roman causeway, a branch of the Hereman-street, is very fair on Botham-moor; it is nine feet broad, and raised near a foot above the common level of the ground. By the side of it is a sepulchrous mount, with two upright stone columns; funeral and religious monuments. On the north-east side of the same moor, is a rock trenched round, with foundations of buildings.

On the right hand of the road, near Shortflat, we have a view of Cap-Heaton, the seat and manor of the ancient family of the Swinburns, and at present possessed by Sir Edward Swinburn, Bart. It is a handsome modern seat, built about the year 1668. Before the south front is a grass-lawn, and a large park inclosed, with small clumps of forest trees; the spire of the temple at Belsay appearing through them from one view, and the precipice and village of Harnham from another.

In the time of Sir John Swinburn, Bart. father of the late Sir John, some Roman sacra and coins were found by his labourers in making a cast for a hedge in a lane near his seat, called Silver-lane, from that discovery. They secreted all the coins, and sold them. The sacra, or sacrificing vessels being of silver, they likewise sold them, after breaking the bottoms out of some, and the handles and ornaments off others. They however presented these following to Sir John, now in the possession of Sir Edward.

A sympalum, weighing twenty-six ounces.

The bottoms of three others; one weighing a little more than a pound, the other half a pound.

The handles of three more, with beautiful figures in relief and gilt. Upon one is the bust of a Roman emperor; two smaller figures on each side, one a shepherd holding a crook in his left hand, and two or three sheep lying by his side; the other, the resemblance of a poor man looking towards the emperor in a supplicatory attitude, his body bending, and resting with both hands upon a staff, with something like a load on his back. Below, on the middle of the handle, is a winged Mercury in a sitting posture, with a Caduceus in his right hand,

hand, his left resting on a bench or seat, grasping something like a ball, with a cock under him in the attitude of crowing. At the bottom are two other deities, standing; one a Diana, in a loose robe, holding a spear in her right hand, her left resting on her hip; a dog looking up in her face. The other a Silenus, naked to the feet, holding a bunch of grapes in his right hand, and a nymphæa, or water-lilly in his left, with a canthera, or jolly flaggon by him, swelling with the grape at the brim.

On another handle are the figures of three animals slain for sacrifice; one a lion, another a stag, and a third a wild boar.

On the third handle is the figure of a priestess before an altar sacrificing, holding incense in her right hand, and a Thyrsus in her left; above her head is the head of a bearded emperor, and at the bottom two other smaller figures.

Part of a handle, whereon is the figure of Mars in armour; and below, a Flamen before the altar of a temple in a grove sacrificing; gilt and in relief.

A figure of Hercules and Antæus wrestling, finely executed; the lion's skin and club lying by them on the left hand.

A Neptune naked to the waist, in a reclining posture, holding his trident in his right hand, and an anchor in his left.

The lane in which these antiquities were found is about a mile from the Roman causeway. They seem by the workmanship to be as ancient as the time of Agricola, who made the grand roads in Britain, in whose time the Romans wore beards, as expressed in the two figures; it not being the custom for that polite people to wear any, from the four hundred and fifty-fourth year of the city, till the time of the emperor Adrian.

Near the Roman causeway is Harnham, or Hernham, that is the military way; Harn or Hern, being a contraction of the Roman Hermen, from Hermes, Mercurius, the god of travellers, and Custos Manium, and high ways; and of the Saxon Hereman, or Hareman, a military road. It stands on an eminence, and has been a place of great strength and security, being defended by a range of perpendicular rocks of stone on one side, and a morass on the other; the entrance is by a narrow declivity on the north, which in the memory of some persons now living had an iron gate. The manor-house is on the south-west corner of the precipice adjoining to an old tower.

Two miles from Harnham, on the right hand of the road, is Belfay, the seat and manor of the antient family of the Middletons. The village is situated on the slope of a hill; adjoining to the family seat is an old tower; and among a clump of trees in a field to the south-east, is a domestic chapel.

Seven miles from Belfay, on the left hand of the road, is a village called Pont Eland; which, from its name, was thought by Camden to be the Roman town, Pons Ælii, since fixed by a late eminent antiquary at Newcastle upon Tyne. It stands on the banks of the rivulet of Pont, in a low situation.

The church is in the form of a cross; at the west end of which is a gallery, and on the front of it an inscription in gold letters, by which it appears that one Mr. Richard Coates bequeathed at his death seventy pounds a year, for the foundation and support of a charity-school in this village.

Within the rails of the communion-table near the altar, is a flat funeral stone of blue marble, with this inscription:

Sub hoc Marmore,
Sita sunt mortales reliquæ
Revdⁱ Viri Henrici Byne, A. M. Coll.
Merton apud Oxonienses olim foici;
Hujus Ecclesiæ Parochialis de Pont—
Eland modo vicarii; supremo tandem
Die functi XXVIII^o. Novembris Anno
Salutis humani MDCCXXXI^o. Cujus
Memoriæ sacrum hoc monumentum posuit,
Defens.
A. B.

Near it is another with the following inscription:

Patris juxta cineres requiescit
Anna Byne,
Forma et indole spectata virgo.
Egregias natura dotes elegantiarum
Artium studio excoluit;
Docilis, ut vix didicisse videretur;
Adolescentulam dignitas matronalis,
Rusticantem decor aulicus,
Venustate celebrem rara modestia,
Quoquo vestigia flectebat, subsequabantur,
Sociarum virginum deliciae et invidia major;
Dum ad apicem femineæ laudis festinabat,
A. D. 1741^{mo}. Ætatis 18^{vo}.
Variolis oppressa mortales exuvias
Amabilis puella subitus deposuit,
Forma inviolabili renovanda.
Elizabetha tali fore re haud indigna,
Funesti contagio consors ætat Anno 16^{to}.
Juxta occubuit.
Dilectis sororibus
Isabella sævi morbi sola victrix,
Hortante matre mœstissima
Hoc Saxum P.

By these two flat funeral stones there is another with this inscription.

Thomas Robinson S. T. P.
Hujus parochiæ per XXX annos vicarius,
Prebendarius Peterburgenfis, nec non Landavenfis,
Et Northumbriensis archidiaconus.
Vividum fuit illi ingenium,
Literis humanioribus tam probe excultum,
Ut ad serâ licet attentus negotia,
Gratiis nihilominus litaret.
Infirma a teneris valetudo,
Aliis sibi desidiæ causa,
Illi nulla obstitit
Quo minus sibi mandata munia
Graviter obiret.
Fidelis verbi minister,
Impiger in pace conservanda justiciarius;
Archidiaconus vigilantissimus,
Adeo ut si majora erant credenda,
Haud indignus videretur.
Quæ supererant interea,
Ita domi componebat omnia,
Ut non inopinanti tandem, vel trepidanti,
Sed expectanti ultra,
Mors amica obveniret,
Anno ætatis LXI^{mo}.
Salutes MDCCCLXI^{mo}.

On the west side of the church-yard is a sarcophagus, or stone coffin, digged up in making a grave, which measures six feet four inches in length within, and seventeen inches over at the shoulders.

Being desirous of tracing the remains of the famous Roman wall, and inspecting the antiquities in the neighbourhood of that remarkable fortification, we crossed the country to Poltras, the rivulet on which that village stands; and which is there crossed by the wall, being the boundary between the two counties of Cumberland and Northumberland.

The Roman, or as it is called by others, the Pic's wall, crosses the counties of Cumberland and Northumberland from an arm of the Irish sea, called Solway frith, on the west, to the German ocean on the east; extending above eighty miles in length. This wall or fence was begun by the emperor Adrian, and built in the manner of a mural hedge with large stakes driven deep into the ground, and wreathed together with wattles. It was faced with earth and turf, and fortified on the north with a deep ditch. In the year 123, it was repaired by the emperor Severus; and strengthened with several stone fortresses and turrets, near enough to communicate an alarm one to another.

The Romans being called from Britain, for the defence of Gaul, the North-Britons broke in upon this barrier, and in repeated inroads, put all they met with to the sword. Upon this the South Britons applied to Rome for assistance, and a legion was sent over to them,

which

which drove the enemy back into their own country; but as the Romans at this time had full employment for their troops, it became necessary for them to enable the South Britons to defend themselves for the future; they therefore assisted them to build a wall of stone, eight feet broad and twelve feet high, of equal extent with the mural hedge, and nearly upon the same ground. This wall was completed under the direction of Ælius, the Roman general, about the year 430; and the tracks of it, with the foundations of the towers, or little castles, now called Castle Steeds, placed at the distance of a mile one from another, and the little fortified towns on the inside, called Chesters, are still visible.

About a quarter of a mile to the eastward of Paltras rivulet, is a breach made in the wall by the Scots, which to this day bears the name of the Gap. From hence it is continued for a quarter of a mile nearly in a straight line to Thirlwall-castle, formerly the seat of the ancient family of the Thirlwalls, and afterwards in the possession of the late right honourable Henry, earl of Carlisle. The castle stands on the western banks of the brook Tippal, whose stream flows under it in a winding current, guarded by a vallum or wall of a prodigious thickness; which, with the brook and a rocky slope, renders it on that side inaccessible. Part of an iron-gate is still remaining at the entrance, within which, on removing the rubbish in the year 1759, the flooring of a room was discovered, consisting of three courses of flags, one above another, a stratum of sand lying between each. The walls now remaining are in some parts three yards, and in others two yards and three quarters thick. The west, for the sake of the stones, is entirely demolished. It has been large and vaulted underneath, as most of the old castles were.

At a small distance from the south front of Thirlwall-castle, is an encampment, with a cespitious rampier and fofs; the first pretty high to the north, now called the Black Dykes; wherein, on digging turf for fuel, lead bullets have been frequently found. A quarter of a mile to the west of this, there is another encampment.

The Roman wall crosses the Tippal, under the south front of Thirlwall-castle, and by a little cottage ascends the hill, for a quarter of a mile to the Roman station, Caer-vorran, so called from the British word, Caer, a town, and Vorwyn, a castle, that is, a garrisoned town, Vorwyn, being corruptly called Vorran by the Northern borderers. The station or fort is nearly in the form of a square; the grand wall making a flexure round it to the south, and then ascending the precipices. The ground within it measures four acres and a half. At the east end of it a human skeleton was found by the workmen employed in digging up the foundations for making the military road through Cumberland; the osseous parts, particularly the skull and teeth, were fresh and fair; but on being exposed to the air, the whole turned to dust.

A small but very fair Roman altar was found here some years ago, inscribed, Deo Viterino; also a small brass lar, and a Roman ring, with a victor, engraved on a coarse Cornelian. A curious and beautiful sculpture of a Roman soldier, in stone of the white rag kind, within a nich and in relief, was likewise dug up near this station, in the year 1760; the figure was helmeted, a pallium or light robe hung down to his feet, fastened at the breast with a fibula; an hasta or spear in his right hand; in his left a parma, or shield, resting on a short pedestal; above his shoulder a lion recumbent, holding a deer between his paws.

About a mile south-east of Thirlwall, is Blankensapp-castle, situated on an eminence on the southern banks of the Tippal. The west and north-west sides of it are defended by a very high cespitious wall, and a deep fofs; underneath which is a vault, which runs thirty-three feet in length, north and south, and eighteen feet and a half in breadth; on the north side of this are two lesser vaults. It has formerly been a very strong building, but the facing of the western wall has been destroyed beyond the memory of any person now living in the neighbourhood. It is at present in the possession of John Bienkensapp Caulson, of Jesmont, Esq;

A beautiful Roman stone altar was dug up here not many years ago, with the following inscription DEABUS NYMPHIS VET^a—MANSVETÆ CLAVDIÆ VREB N. H. L. A. I--ivs.

Near this was also found another stone altar, inscribed as follows: DEO VITIRINO—LIMEO—ROVE P. L. M.

From hence we proceeded by the wall from Caer-vorran, for half a mile, and came to a piece of it now standing of the height and breadth of nine feet; and continuing our course half a mile farther, we came to Wall-Town, the lordship and seat of John Ridley; from whence we passed on with the wall for a mile and a quarter, and then came to the station of Great Chesters. The ruins of this ancient place are still very visible. The town, which was situated on a spacious slope, was nearly of the square form, but the angles obtuse, or rounded off. On the east side of it is an altar in a patera sculptured on one side, but the inscription is entirely effaced by the weather. Near it is another stone, with the figure of a man in a niche; his head gone, but his left hand rests upon his side, and his right hand on a short column: there is not the least vestige of an inscription.

In the beginning of the year 1767, the workmen in digging the foundations of a building, near the upper end of the station, found a very large stone with a long inscription, but imperfect by two fractures at the lower corners, whereby nearly half of four lines are wanting, besides some letters. Part of the second line is also injured. The rest is perfect, and is as follows:

IMP. CAS M. AVR SEVE
RUS. MENCANDER. PEE
AUG. HORREUM VETV
STATE CORN. AR JUMM
CHO. II. ASTURUM SA
A SOLO RESTIVERVNT
PROVINCE ARCENT
MAXIMO LEG. W GPRP
SAL MARTI MED LEGA
TVS CO. II. ET DEXT.

The table is a fine rag-stone, nearly square, with a handsome moulding.

In the wall near this place a stone was dug up inscribed thus: PRO SALVTE DESIDIENIÆ—LEANI PRÆ ET SVA. S. POSVIT VOT—AO SOLVIT LIBENS. TOSCO ET BASSO CASS.

At the same place was also dug up a stone altar, inscribed DEÆ SVRIÆ SVB CALPVRNIO AG.—ICOLA LEG. AVG. PR. PR. A LICINIVS—LEMENS PRÆF.—III. A. TOR.

Camden proposes to restore the reading thus: *Dea Suria, sub Calpurnio Agricola Legato Augusti Propratore, Licinius Clemens Præfatus.*

About a quarter of a mile to the southward of the station, near a mill called the Wall-mill, is a funeral stone fixed in the ground, with the figure of a child in a niche, and an inscription underneath, now very obscure, being exposed so long a time to the weather. It is four feet and a half above the surface of the ground. Hard by it is another sepulchral memorial, now converted into a post for a gate, and called Wall-mill-gate.

Upon a ridge of moor, at some distance from Wall-mill, are four tumuli, about twenty-eight yards asunder. They were all lately cut through, and entire bones, with an urn filled with ashes and salt found in them. The salt was white, fair, and well preserved.

The town of Haltwefel is situated on the south Tyne, two hundred and fifty-seven miles from London. A manufacture of coarse bays has been lately established here, to the great advantage of the labouring poor. It stands on a rising ground, and the church-yard forms a terrace, from which there is a fine prospect of the valley and the winding course of the river. The church consists of three isles; has a lofty roof, and the Gothic window above the altar is large and stately. Here is a free-school endowed by lady Capel. The weekly market, which is held on Thursdays, is small and inconsiderable; but there is a well frequented fair on the twenty-sixth of August, for black cattle, sheep, linen and woollen cloth.

A little to the eastward of the church, on an eminence, are the vestiges of a fort, surrounded by a wall of earth on all sides except the south, where there is a pretty steep slope. The prospect from this ruined castle is very pleasing. The river is soon lost under hanging woods, between which the meadows and corn-fields form a spacious area.

A little below Haltwefel, the river Tyne is crossed by a stone bridge, consisting of one bold arch, founded by a rock at each end, called Fetherstone-bridge; and about half a mile above it is Fetherstone-castle, the seat of the ancient families of the Fetherstonehaughs. The castle is vaulted underneath, and has two exploratory turrets, one on the north-west, and the other on the south-east. It stands in a low situation, in a fertile vale or haugh, on the east bank of the Tyne.

About two miles farther on the western bank is Lambley, where there was formerly a priory of Benedictine nuns, dedicated to St. Patrick; but the founder is not known. There were six nuns in the priory at the suppression, when their annual revenues were valued at five pounds, fifteen shillings and eight-pence. The spot on which the convent stood, was some time since washed away by an inundation of the river Tyne.

About five miles from Lambley, and on the same side of the river, is Whitley-castle, formerly the Roman station Alione. It stands on an irregular slope by a rivulet of the same name; the famous Roman military road, called the Maiden-way, coming to it from Caer-vorran. A detachment from the twentieth legion, called Valens Victrix, repaired it; as it is evident from a centurial stone, inscribed,

VEXILATIO LEGIONIS VICCISSIMÆ
V. V. REFEKIT.

It is also evident from two inscriptions on altars, inscribed to the emperor Caracalla, that the third cohort of the Nervii was stationed here.

Alione is thought to have been garrisoned by the Romans, till their whole army left the island. The ruins are large, and the ramparts and ditches still very conspicuous.

In the church-yard of Kirk-haugh, on the other side of the Tyne is an altar, inscribed,

DEÆ MINERVÆ ET HERCULI VICTORI.

About a quarter of a mile from the bridge over Haltwefel-burn, on the military road, are three upright pillars of whinstone, two of them broken off near the middle. They are supposed to be religious or funeral monuments of the ancient Britons; but when they were erected is unknown.

A little farther on the military road is a view of the Roman station, called Little Chesters, easily distinguished by a clump of trees and brush wood, forming a kind of natural arbours, and hence it has obtained the name of the Bowers. The station is of the usual form, nearly square, containing about an acre and a half; and the wall round it, composed of stone and earth, is very fair. On the south is a deep ditch, or hollow; and on the east a pleasing rivulet, called Bardon-burn.

The Via Vicinalis from Caer-vorran to Walwick-Chesters, runs along the north side of it, and on which a Roman military stone is still standing, near a gate, called Caudley-gate, near the brink of Bardon-burn. A mile to the west of this, and in a straight line, is another military stone. These mile-stones are in fine preservation, six feet four inches in diameter, and about the same height above the ground. They are of a round figure resembling large rollers.

Several Roman antiquities have been dug up here: and lately a Roman hypocaustum, or sudatory, was also discovered, and of which the late Mr. Warburton, Somerset-herald, has given the following account: "Some years ago, on the west side of this place, about fifty yards from the walls, there was discovered, under a heap of rubbish, a square room, strongly vaulted, and paved with large square stones, set in lime; and under this a lower room, whose roof was supported by rows of square pillars of about half a yard high: the upper room had two niches like chimneys on each side of every corner or square, which in all made the number sixteen:

the pavement of this room, as also its roof, were tinged black with smoke. The stones used in vaulting the upper room have been marked as our joiners do the deals for chambers; those I saw were numbered thus, x.xi.xiii."

In digging up the foundations of a castellum, or military turret, in the wall, in an opening of the precipice by Crag-Lake, called Laugh-End-Crag, or Milking-Gap, to the north-east of this station, a very large centurial stone was found by the workmen, inscribed thus:

IMP CAES TRAIAN
HADRIANI AVG
LEG II. AVG

A PLATORIO NEPOTE LEG. P. R. P. R.

A large stone, in the form of an altar, was likewise dug up at this station, with the sculpture of a red deer in the center, leaning against a tree, and two fawns at the bottom in relief. It was two feet thick, of the fine white rag, adorned with mouldings.

Many stags horns have also been dug here, some of an unusual size; and a temple, supposed to have been built in honour of Diana, was discovered by some masons who were digging for stones. It appeared to have been very beautifully adorned with Doric pilasters and capitals.

In the south-west end of the well-house, at the west end of the station, is an altar inscribed:

MARTI VICTORI
COH III. NERVIORVM
PRÆFECT I. CANINIVS.

It is thirty-four inches long, and twelve inches and a half broad. The inscription within a neat moulding or raised border; but much injured by the weather, though cut on so durable a stone as the white rag.

On the other side of the Tyne, by the confluence of the brook Allen into that river, is Ridley-hall, anciently belonging to the Ridleys of Willimotefwicke; but at present the seat and lordship of William Lawes, of Newcastle, Esq; The house, which was built by its present owner, is situated on a rising ground, the south front of brick. Before it is a pleasant garden, from which, to the southward, is a fine terrace walk, with the Allen on one side, and a hanging wood on the other; near its termination is a precipice of broken rocks, called, the Raven-Crag, from its being the resort of those birds.

Opposite to Kings-wood, and a mile and a half from the Raven Crag, on the eastern banks of the Allen, is the ruin of Steward-le Peel, or Steward-castle, situated on the ridge of a rocky peninsula, or promontory, between the Allen and Haifingdale-burn, a small rill: it is entered on the east by a narrow, lofty terrace, whose sides are clothed with trees, through which appears rocks and precipices; under it is a triangular area in tillage, with a hut in the midst of some scattered trees, the Allen passing by in broken murmurs, enlarged by the streamlet of Kings-wood; a semicircular hanging wood adorning its western margin; the rocks of Shewing Sheels, and the villa of Torngrafton, in view to the north. A fragment of the gateway is still standing, where was formerly a draw-bridge, an iron-gate, and port-cullice. There are also nine courses of it standing at the west end, of the white rag-stone and hewn work, the cement of which is so strong, that one stone can hardly be separated from another without breaking them; it is guarded by a foss, and a vallum of earth and stone. It anciently belonged to the friars Heremites of Hexham; granted, with its demesnes, by Edward, duke of York, to hold by the annual payment of five marks. It is in view from High, but now from Low Staward; as are many of the beauties of the Allen, whose banks, from its ostium to its association and union with East-Allen, present us with such groups of rural imagery as are not to be surpassed by any spot in this county. Among others is a crag called Juda's-Crag, well known to hunters, for affording protection to foxes, in their distress by the chace.

About a mile and a half from High-Staward, under a hill, the two Allens pass in a pleasant stream, immediately after their junction, through a handsome new

bridge of three arches, of white free-stone. At the ostium of West Allen is a lead-refining mill, called, the Cupilo, belonging to a wealthy company of quakers. On the western shady margin of that rivulet is a handsome road, about a mile and a quarter in length, leading to Whitfield-hall, the seat of the ancient family of the Whitfields; at present possessed by William Ord, of Fenham, Esq; who hath made considerable improvements, by buildings, inclosures and plantings.

The house stands at a small distance from the village, on a rising ground, by the streams of West Allen, the eastern boundary between this manor and that of Hexhamshire. Before the east front is a hanging bank of wood, called Monk, remarkable for its beautiful hollies. From a limestone-rock, about a mile to the south, there is a water-fall, by a precipice of a prodigious height nearly perpendicular.

At Limestone-cross, in the manor of Whitfield, there was formerly a lead-mine; and on Whitfield-fell is a chalybeat spring called Redmires.

About a mile from the Cupilo is Old Town, situated partly on an eminence, and partly on a slope, extending to East Allen. There is a house situated next the moor, called Stony Law, from a little craggy mount, composed of earth, and large single masses of coarse rag stone, streaked with red and white. A quarter of a mile to the east of it, upon the moor, is a hillock of stones, whereon, about fourteen years ago, stood an upright piece of timber, or pole, called Catton-beacon; to which was affixed a vessel with fire in it, to alarm the country on any public danger.

At a small distance from hence is Allen-dale-town, situated on an eminence on the banks of East Allen. It is inhabited chiefly by miners. The church is small, consisting of one isle; near the altar is a flat sepulchral stone to the memory of John Beacon, Esq; and his wife Cicilia.

At Bride's-hill, near this town, is a free-school, founded by Mr. Christopher Wilkinson, of Chapel-house, who endowed it with two hundred and fifty pounds. It had several other endowments; and in the year 1704, the school-house was built, which cost fifty pounds.

By a gradual ascent from this town, a road leads southward over a moor to the village of Allen-Heads, inhabited also by miners; both belonging to Sir Walter Calverly Blacket, Bart. Sir William Blacket, Bart. erected a chapel here for the conveniency of the miners, and appointed a minister to officiate in it, on whom he settled a salary of thirty-pounds, *per annum*. Sir William also gave ten pounds, *per annum*, to a schoolmaster, for teaching the miners children to read and write.

To the east of, and half a mile from, this mineral village is the mountain, called Shorn-gate, over which the Scots made a road by paring the moss, and rolling in stones in their precipitate retreat homewards from Stanhope-park. The boundary-line, called the Scotch Dike, extends from this place northwards by Catton-beacon, and crosses the Roman wall at Busy Gap.

There being nothing more remarkable by the streams of the two Allens, we continued our journey on the military road for about two or three miles, and came next to House-Steeds, the ruins of a Roman town named Borcovicus, seated by the Roman wall, and is the place where the first cohort of the Tongri, a part of the Roman army, lay in garrison. There is no place in Britain that has equalled this with respect to the extent of the ruins of the town, and the number, variety, and curiosity of the sculptures which yet remain there. Mr. Horsley has given sixteen of these, of the most curious of which we shall give a description. The following is an altar found lying on a large ruinous heap, now called Chapel-hill, fully exposed to the injuries of the weather. It bore the following inscription: ET NOMINIBVS AVG. COH. T. TVNGROR. AVI. PRÆ. EST Q. IVL. MAXIMVS PRÆF.

Another bore the following inscription:—NI--VENO—RI G. OSERSIONIS—ROMVLO A---IMA--TRI---MANSVETI OSENI CIONI -- RE VINCE QVAR-

TIONIS ERE SI PROCVRAVIT. DELF VSRATIONIS. EX. G. S.

On a third beautiful and fair altar was inscribed as follows: T. O. M. Æ. NVMINIBVS. AVG. COHO. T. TVNGRORVM MIL. CVI. R. CÆST. Q. VERIVS SUPERSTIS PRÆFECTUS; which may be read thus: *Jovi Optimo Maximo Et Numinibus Augusti cohors prima Tungrorum militum cui prae est Quintus Verius Superstis Praefectus.*

The unusual shape of the I for Jovi is remarkable. In the same ruinous heap was found another altar, which was also in a pretty perfect state. At the bottom of a field south-east of this station were many more sculptures and altars, and the visible ruins of streets and buildings. At the edge of the fields where the Roman town stood, Mr. Horsley found nine inscriptions and sculptures, most of them erected by the same cohort of the Tungrians, among which was the following, erected to the god Mars, by Quintus Florius Maternus, prefect of the same cohort: the globe on the base of the altar was very remarkable; the inscription was as follows:

D E O
MARTIQVIN.
FLORIVSMA
TERNVS PRAEF
COHITVNG
V S L M.

which is to be read thus: *Deo Marti Quintus Florius Maternus praefectus cohortis primae Tungrorum v. tum solvit libens merito.*

At this place are likewise several curious sculptures, most of which are described by Mr. Gordon; but Mr. Horsley says, the accounts given of them in Camden's Britannia is not very exact. Among these is a Victory standing upon a globe winged, with the usual drapery, done in alto relievo. The figure of a Roman soldier at length, in the usual military dress, a poniard in his right hand, and a bow in his left; his sword hung at his girdle, and his quiver of arrows on his right shoulder: another figure of a soldier in his accoutrements; his two belts are visible crossing each other, agreeable to the description of Ajax's armour in Homer.

But there no pass the crossing belts afford,

One brac'd his shield, and one sustain'd his sword.

POPE.

Another piece in relievo consisted of three female figures seated, which plainly appear naked up to the knees, and are, with great probability, supposed to be local goddesses, or the Deae matres, or campestres. There are also three female figures represented together, at two other places in this Roman station.

Besides many other inscriptions, here was found a remarkable piece of sculpture in relievo, representing Mercury with his caduceus in his left hand, and purse in his right. Above his right arm, is somewhat like the cap of Liberty, but the head of the figure, and the upper part of the stone, is broken and confused. On the side of Mercury is an altar with this inscription upon it, DEO MERCURIO, and a Camillus lays the incense on the altar. This stone was found by Mr. Warburton, who presented it to the Royal Society, in whose museum it now is.

At Cockmount-hill in this neighbourhood lies a curious piece of sculpture in relievo, first taken notice of by Mr. Gordon, but in his draught of it he has omitted two eagles, on whose wings the victories stand that support the vexillum. Each eagle rests upon the branch of a tree. At the bottom are two boars, and that on the right plainly appears to bite the stock of the tree on that side. Mr. Horsley makes no doubt but that the boars and the trees were designed to represent this wild and woody country, as it then was, and that this sculpture plainly denotes the conquest of this country by the Romans, their victories over the inhabitants, and their making a settlement here, in opposition to all the attempts of their enemies. The heads of the eagles are broken off, but the rest of them is very distinct.

Continuing our journey from hence southward we came to Langley-castle, formerly the ancient seat of the barons

barons of Tynedale. The castle is situated on a rising ground on the south side of the Tyne, in the form of the Roman letter H, with four towers standing north and south; many of the windows large; four small fire-rooms remaining entire to the east, besides eight others, four ground-rooms to the east, and as many to the west; the roofs arched with stone; the walls are six feet ten inches thick; and the north-east tower sixty-six feet high; to the west, the foss or ditch is still visible.

In view from this castle, about a mile to the north-east, on the banks of the Tyne, is its appendent manor and village, called Hoyden-bridge; to which the first Anthony, lord Lucy, procured a weekly market on Tuesdays, and an annual fair on July the twenty-first, and three days after; but those are now discontinued. The Tyne is here crossed by a bridge of six arches; on the south side of it, on a little eminence, is a grammar-school; over the entrance of which is the following inscription:

Hæc schola fundata et
Munifice dotata fuit anno
Domini MDCXCVII. a
Reverendo et doctissimo viro domino
Johanne Shaftoe, A. M. ecclesiæ
Netherwarden in hoc agro vicario;
In tam benigni capitis elogium
Deesse nequit: hoc unum opus pro
Cunctis aliis suis beneficiis fama loquetur.

For the use of this school, and the relief of poor housekeepers within the chapelry of Hayden, the Rev. Mr. Shaftoe, vicar of Netherwarden, left his estate of Mousen, near Belford, which estate now lets for upwards of one hundred and fifty pounds, *per annum*. The grammar-master, who is obliged to be of the degree of master of arts in one of our universities, has a salary at present of upwards of fifty pounds, and the usher, five pounds, *per annum*.

On the right hand of the military road is Carraw-Brough, the Roman station Procolitia, garrisoned by the first cohort of the Batavi, as attested by an altar found near it inscribed thus:

FORTVNAE
COH. I. BATAVOR
CVI PRAEEST
MELACCINIUS.
MARCELLVS PRAE.

The first notice taken of it was by Dr. Cay, by whom a copy of it was presented to Mr. Thorsby, and published in the Philosophical Transactions. It was then in fine preservation, the stone handsome, and the inscription fair.

Carraw-Brough derives its name from the Saxon Burgos, or Brough, and the great emperor Carausius, who obtained that memorable sea victory over the two emperors Maximilian and Dioclesian, on the coast of the Isle of Wight, near Carisbrook-castle, so named in honour of the victor, Carausius.

A curious sculpture of Neptune, down to the knees, in a reclining attitude, with his trident by him in stone of the fine white rag, was dug up at this station, and built up in the eastern gable of a cottage at Carraw.

From hence we proceed by a gradual ascent to Tone, the seat of Alan Hodshon, Esq; who has made considerable improvements at it, by repairs and additions to the house, and by inclosures, hedge-rows, and plantations about the grounds; and likewise by rendering the roads extremely good.

We have a fine view from this seat of Chipchace-castle, anciently the seat of Peter de Insula. In the reign of king James I. it was in the possession of Colonel George Heron, who built, adjoining to the old castle, a very handsome structure; the initial letters of his name G. H. cut in stone, on each side of his coat of arms, with the date of the year, 1621, above the south entrance. It was many years after purchased by the late John Reed, Esq; who added much to its beauty, by finishing the whole building, making gardens, plantations, and enclosures; rebuilding the chapel, and finishing it neatly. It is at present in the possession of Christopher Reed, Esq; nephew of the above gentleman,

who has likewise made considerable improvements to the seat by additional buildings to the house, which he has laid open to groves and plantations; and by throwing the fields before it into the form of a park. Chipchace is delightfully situated on the declivity of a hill, to the east of the river of North Tyne; from it is a beautiful prospect of Nunwick, and Simonburn-castle, diversified with the view of woods, moors and rocks, and of the winding motions and meanders of the Tyne; which, opposite to the house, forms a large deep canal, overhanging on one side by a woody bank, and on the other by a shady projecting cliff.

Under the hill on the left hand, a road branches off to Nunwick, formerly a village, but now the seat of Sir Lancelot Algood, Knt. who himself erected it after a genteel design; of white free-stone and hewn-work. It is situated on a rising plain, which to the east has the appearance of a park. The offices are to the north, a grove to the west, a grass lawn to the south, and terraced gravel walk to the east, which commands a view of Chipchace at one end, and a variety of prospects on the other. Two brooks here unite their loquacious streams, which gives an additional beauty and ornament to a neat garden, and renders it at once, not only an entertaining, but useful recess: from hence they take their course through another grove, on the declivity of a hill to the south front of the house, and fall two or three fields below into the river of North Tyne.

In an adjoining field, called, Nunwick-east-field, were five upright stone pillars, in a circular order; four of them perfect and entire in 1714, the other broken; the perfect ones eight feet high, and nine feet and a half over; the circumference of the area in which they stood, ninety feet. This was the kind of cirques, in which the Britons held their public assemblies, both civil and religious.

Sir Lancelot has given a new face as it were to the country round Nunwick, within the space of a very few years, by making plantations, enclosures, and good roads, one of which leads to the village of Simonburn, at the distance of a mile from his seat. This village is situated on a rising ground, by the side of a pleasant brook, from which, and the dedication of the church to St. Simon, it takes its name. It is remarkable for being the largest parish in the diocese, extending northward from Chollerford-bridge to Liddefdale, in Scotland; an extent of twenty-three computed, or thirty-two measured miles; in which are only two chapels of ease, Bellingham and Falstone. The Rev. Mr. Henry Wastell, the present rector, has made considerable improvements to the rectory house, the south front of which he has entirely rebuilt, and greatly repaired the whole building, which was originally built by Algood, grandfather to Sir Lancelot. The following inscription, though much injured by the weather, is still remaining over the entrance of the house:

Non tam sibi, quam successoribus suis,
Hoc ædificium extruxit Major
Algood, anno mirabili, 1666.

Nunc mea, mox hujus, sed postea nescio ejus.

In 1763 the church was repaired, the walls of the side isles raised; three sash-windows put in on each side, and another at each end to the east.

By the pulpit and window at the east end of the south isle, is the effigy in stone of one of the ancient family of the Ridley's. Near him are three of his family, and under him the following inscription:

SENSUS VIVUS.
RECORDOR MISERICORDIAM
DEI ERIPIENTIS EX HAC VITA
IN VITAM ÆTERNAM ALBANUM
RIDLEY, FILIUM CUTHBERTI RIDLEY
MISERI PECCATORIS, ANNO DOM. 1625.

Above this stone figure are two others with this inscription:

DEFECTUS MEMORIÆ.

In the year 1762, in digging a grave in a pew under one of the windows, a very remarkable skull was turned up with the spade; on the back part of it, the figure of a large

a large scollop-shell; and at one of the auditories, of a torcular shell like a screw.

On the south side of the chancel, within the communion-rails, is a flat funeral-stone to the memory of Giles Heron, of Wark, in this parish, interred in the year 1684; who by industry and extreme parsimony acquired the sum of eight hundred pounds, which he left by will for the relief of the poor of this parish, the maintenance of a schoolmaster at Wark, who has a salary of twelve pounds, *per annum*, and the binding out the poor children apprentices.

In a grave in the church-yard, about three feet below the surface, a small, bright silver coin of king Edward II. was found in 1756. On the obverse is the profile of that monarch; and on the reverse, CIVITAS LINCOLN, the place of mintage.

About half a mile north-west from the village of Simonburn, is Simonburn-castle, which belonged to the Herons of Chipchace; but was sold with its manor and demesnes by Sir Charles Heron, Bart. to Robert Algood, Esq; and is possessed by his son-in-law, Sir Lancelot Algood, Knt. It is situated on an eminence, shaded by tall fir and beach trees, a small stream, carrying the name of Castle-burn, gliding under it, between two hanging woods. This castle was demolished by the country people, from a firm persuasion they had entertained of there being a considerable quantity of hidden treasure under it; but to their great mortification, they found after they had pulled it down that it had been all labour in vain. Part of the west end was rebuilt in the year 1766, with two small turrets at the angles. It is a pleasing object in many prospects, and may be seen at a considerable distance.

Seven miles north from Simonburn, on the eastern banks of North Tyne, is Bellingham, a small, but well built pretty town, belonging chiefly to Christopher Reed, of Chipchace, and the heir of Edward Charleton, of Reedsmouth, Esqrs. the manor claimed by his grace the duke of Northumberland. It is pleasantly situated on a rising ground, two hundred and eighty-six miles from London. The church is small, but ancient, dedicated to St. Cuthbert; the roof of the body of it arched with stone, of rib work, without any timber in it; in the pavement are many grave-stones, sculptured with swords; but without inscriptions on them. In the chancel on the north side, is a mural monument of blue and white marble, erected by the late John Reed of Chipchace, Esq; to the memory of his father. The church-yard is agreeably placed, forming a fine terrace above the river.

Bellingham has a weekly market on Saturdays, and an annual fair, held on Saturday after September the fifteenth, for black horned cattle, sheep, linen and woollen cloth.

A mile from Bellingham, on the western banks of the North Tyne is Hezley-side, the seat of the antient family of the Charletons; and at present in the possession of Edward Charleton, Esq. The house is a modern structure of hewn work and white free-stone, built after a plan resembling that of Lowther-hall, in Westmoreland. It is situated on the top of a gentle declivity, under a hanging bank of wood; an avenue extending from it through shady inclosures to the river Tyne, from which is a varied prospect to the north, of woods, rocks and moors.

About four miles north-east from Hezley-side, on the eastern banks of the river Reed is Risingham, that is, the hamlet on a rising ground. It is of note for being the Roman station Habitaneum, by their famous road called Watling-street; on which a mile to the southward of it was standing some years ago one of their military stones, like that, by their station, at Little Chesters. Brass coins and medals of Roman mintage, of the Antonines, are frequently turned out of the ground here by the moles. In the year 1701, a medal was found, with the emperor's name on the obverse, somewhat effaced, but the words Aug. Pius. very legible; on the reverse is a wolf without any inscription.

This station is not mentioned by Antonine in his Itinerary, yet it must have been a Roman garrison in the

time of Aurelius Antoninus, as appears from inscriptions on altars found at it, mentioning his name. Some take this Aurelius to be the philosopher Antonine, and that it might have been deserted before the reign of Caracalla, the reputed author of that Itinerary.

Camden tells us the inhabitants of Risingham had a tradition that their town was a long time protected by a deity called Mogan, against a certain Soldan, or pagan prince. That such an opinion once prevailed, appears plain from the inscriptions upon two stone altars found here; one of which was inscribed as follows: DEO MOGONTI CAD. ET N. DN. AVG. M. G. SECUNDINVS BF.---CAS---HABITANCI PRIMAS TA---PRO SE ET SVIS POSVIT.

Which inscription may be read thus: Deo Moganti Cadenorum et Numini Domini Nostri Augusti Marcus Gaius Secundinus beneficiarius Consulis Habitanci prima statione pro se et suis posuit. The whole inscription is still very legible, though it is above one hundred and twenty years since this and another altar were taken out of the river Reed. The altar was erected to Mogan and the deity of the emperor by one Secundinus, a beneficiary of the consul. The beneficiarii were soldiers who attended the chief officers of the army; they were exempt from duty, and seem to have been somewhat like those we now call cadets.

Besides the above here were also found a great variety of other stone altars, inscribed to different deities, together with a long stone table curiously engraven and inscribed as follows: NUMINIB. AVGVSTOR COH. IIII. GAL. E Q. FEC. ——— besides a most beautiful altar of the same materials with the following fair inscription: FORTVNÆ COH. I. BATAVOR CVI PRÆ EST MELACINIVS MARCELLVS PRÆ.

At Elifhaw, a small village on the same side of the river, are foundations of large buildings. The river near Watling-street is here crossed by a bridge.

Near two miles from Watling-street, is Elfden, a town of great antiquity; supposed to have been a Roman town in the time of M. Aurelius Antoninus. Two Roman altars with inscriptions were found here in a hill, called the Mote Hill; one of them inscribed to the titular deity, Matunus. This hill is trenched round ten yards deep, to the north of which is a breast work for its defence. Jaw-bones of beasts, a large stag's head, and a small urn, with ashes of burnt bones in it, were dug up by the late Mr. Warburton, and some imperfect Roman altars observed by him about the hill. It has been both sepulchral and exploratory.

The lordship of Elfden is in the possession of the duke of Northumberland. The church is small, situated on the west side of the village. At a small distance from it is an old tower, now used as a rectory house.

At Berrenes is the ruins of an old chapel; and near it on Berrene's-Knowl, a British temple, and numerous stones of various sizes, in a circular order.

On a green hillock on a moor, called the Todd-Law, north of the river Reed, are three large stones in a triangular order, twelve feet distance from each other, and each as many feet in diameter, sepulchral monuments, in memory of the like number of valiant chieftains slain in battle.

On the west side of the river Reed is Troughend, the seat of the ancient family of the Reeds, about a mile from which is Otterburn, so called from its situation on the brook Otter, remarkable for the desperate battle fought at it on the fifth of August, in the year 1388, and twelfth year of the reign of king Richard II. between the English and Scots by moon-light; the former commanded by the earl of Northumberland, and his two sons, Henry and Ralph Percy; and the latter by the earl of Douglas, who being desirous of achieving glory by encountering Henry, lord Percy, in single combat, who was reputed the bravest man in England, and for his martial prowess surnamed Hotspur, was over-matched with strength, though in no respect out done in valour, and slain. Intimidated by the fall of their chieftain, the Scots were on the point of yielding the victory, when a large body of forces arriving under the command of the earl of Dunbar, the English were in their

their turn forced to give way, and at length after a glorious struggle to surrender the laurels.

Four miles from Otterburn, and eight from Rivingham is Rochester, the Roman station *Bremenium*, seated on the brow of a steep rocky hill, near the head of the river Reed by Watling-street, the course of the first *Iter* of Antoninus; reputed the strongest garrison of any the Romans had in the north, being the capital of the *Ottodini*, and stipendiary. The Tribunes *Cæpio Charitenus*, and *Lucius Cælius Optatus*, were both commanders in it; the latter having under him a body of Spanish auxiliaries, the first cohort of the *Varduli*, from *Hispania citerior*.

Many coins of *Marcus Aurelius Antoninus* have been dug up here; and likewise a Roman altar, with the following inscription: *D. M. CIV. L. FLINGEN. MI. LÆG. VLV. F.*

Another ancient altar was found among the rubbish of an ancient castle, on which is this inscription:

D. R. S.
DVPL. N. EXPLOR.
BREMEN. ARAM.
INSTITVERVNT.
N. EIVS. C. CAEP.
CHARITING. TRIE.
V. S. L. M.

This inscription *Mr. Horsley* observes, should be read thus: *Deae, Romae sacrum duplæres numeri exploratorum Bremenii aram instituerunt numini ejus Cælo Cæpione Charitino tribuno votum solverunt libentes merito.* *Mr. Horsley* observes, on his rendering the *D. R. S.* at the top *Deae Romae sacrum*, that there needs no proof to convince those who are acquainted with medals and other Roman antiquities; that the Romans made a goddess of Rome, and erected altars and temples to her. *Camden* justly conjectures, from the mention of the word *Bremenium* upon this altar; that that station, which has been so industriously, and so long sought for, was situated at Rochester, and that *Antoninus* began his first journey in Britain from this place, as from its utmost limit. Other very curious inscriptions have been found at Rochester.

From the rising ground, where the road branches off to *Nunwick*, we have a delightful view of *Swinburn-castle*; which, in the reign of *Edward I.* was in the possession of *Peter de Gunnerton*, who held it of the barony of *Bywell*, by the service of two knights fees, of the old feoffment. It is now the seat and lordship of *Thomas Ridell, Esq;* who erected, out of the ruins of the old castle, the present elegant structure. It is pleasantly situated on the southern banks of a rivulet, and sheltered to the east and west by some tall trees. Before it is a spacious field adjoining to a shady wood; and from it may be seen an extensive and pleasing prospect.

From the same sloping eminence on the military road we have a slight prospect of *Houghton-castle*, on the western banks of *North Tyne*, agreeably shaded with trees. It was formerly a remarkable large strong building, the entrance to which was by a flight of steps; but it is now much decayed, and almost entirely unroofed. In the walls, which are of an amazing thickness, is cut a neat little room just big enough to hold two or three chairs and a table. In it is a fire-place, and one window; near it is a stable without any timber in the roof, arched with stone; and also a domestic chapel, now in ruins. This castle belonged formerly to the *Swinburns*, but is at present in the possession of *Mr. William Smith, Gent.*

Continuing our journey down the hill we came next to *Walwick*, that is, the village on the wall, which is here in better preservation than in any other place through its whole length in *Northumberland*, *Well-Town* excepted. The village belongs chiefly to *Thomas Dixon, Esq;* whose seat was lately repaired and beautified.

A little below *Walwick* on the right hand, is *Walwick-Chesters*, the Roman station *Ciburnum*, garrisoned by the *Cohors prima Vangionum*. The ruins are still visible, covering a spacious area, with a beautiful slope to the south. A consular medalion of *Hadrian*, of the old mixed brass, was found near this station by some la-

bourers in making the military road. It is four inches in circumference; his bust in bold relief on the obverse; the legend round it, *Hadriano Aug. Caesari*; within a laureated border, or civic garland:

S. P. Q. R.
OPTIMO PRINCIPI,
S. C.

It was struck on the first of January, a day sacred to *Janus*, observed with great solemnity, as presaging the felicity of the new year. The consuls entering on their office on that day, their coins were then minted, with *S. C.* in area, that is, *ob cives servatos*.

The Romans crossed the *Tyne* at this station by a stone bridge; some of the stones of which may be seen when the river is low.

A little farther down the *Tyne* is *Walwick-Grange*, the seat of the late *Anthony Errington, Esq;* father of the present possessor *John Errington, Esq;* It is a modern built structure adjoining to an ancient tower, situated upon a rock on the banks of the *North Tyne*.

In a field south-west of the *Grange*, by the road to *Netherwarden*, is part of a stone cross, or upright pillar on a square pedestal; upon one side of which is sculptured in relief the figure of a sword sheathed.

About a mile south-west from the *Grange*, we crossed the *Tyne* by a stone-bridge of four arches, called *Chollerford-bridge*. In the reign of king *Richard II.* a release from penance for thirteen days was granted by *Walter Skirlaw*, bishop of *Durham*, to all such as should contribute either by labour or money to the repair of it.

A mile and a half above the bridge is *Chollerton*, that is the town by *Chollerford*, a pleasant village, situated on the banks of the river, belonging to *Sir Edward Swinburn*, of *Cap-Heaton, Bart.*

The parish is large, and the chancel of the church has been lately rebuilt, the roof sealed, and a handsome new tower erected at the west end. The vicarage-house is a neat structure, built with all other conveniences, by the present incumbent, the *Rev. Mr. Stoddart*.

From the bridge we ascend the hill across the *Hexham road*, by *Branton*, to the turnpike-gate; opposite to which, on the right hand, is a flight of terraces on a bank, called *Hanging-Show*, of the same use as the *Shote-Hills*, exploratory, for the military to retreat to on any sudden alarm, to observe the motions of, and shew themselves to an enemy, one rank above the earth.

From hence continuing our course up the hill by *St. Oswald's-chapel*, we arrived next at *Hexham*, situated chiefly on an eminence, by the little brook *Hextold*, and near the united streams of *South and North Tyne*, two hundred and seventy-six miles from *London*. It is a town of great antiquity, and gives name to a large tract of county called *Hexhamshire*. The most learned antiquarians believe it to be Roman; and all, except *Mr. Horsley*, give the name of *Axclodunum*, or *Uxclodunum*; importing the same thing as the Celtic, or ancient British word *Uchelodunum*, that is a high situation. *Mr. Horsley* is firmly of opinion that it is the Roman *Epiacum*, or *Ebchester* of *Camden*; and that *Brough* on the *Solway-fands* in *Cumberland* was their *Axclodunum*, and the station of their *Cohors prima Hispanorum*.

In the year 1726 was discovered in a vault at *Hexham church*, two inscriptions, both Roman, and both remarkably curious. The workmanship of one of them was very badly executed; but it was nevertheless rendered curious by bearing a new name of a *Legatus Augusti*, viz. *Q. Calpurnius Concessinus*; and that a body of horse at *Corchester*, called *Equites Cæsarienses*, or *Cæsariani Coronotæ*, not mentioned either in the *Notitia Imperii*, or any where else. The other is of *Lucius Septimius Severus*, of the best sculpture, the letters large, but very imperfect. The curiosity of this consists in its bearing so distinctly the name of that emperor, and its being the only genuine one found so near the well with his name upon it.

Richard, the prior of a monastery in this town gives the following account of it. Not far from the southern bank of the river *Tyne*, says he, stands a town of small

extent, and but thinly inhabited; yet it was once very large and magnificent. It was called Hextoldefham, from the little rivulet that runs by it, and sometimes suddenly overflows it. In the year 675, queen Etheldreda, wife to king Egfrid, assigned it for a bishop's see, to St. Wilfrid, who built a church and monastery here dedicated to St. Andrew, which surpassed in beauty all the religious houses in England. Several privileges were granted to it by the Saxon kings, and the bounds of its sanctuary extended a mile every way. The above monastery contained a prior and regular canons of the order of St. Augustine, who, at the time of the dissolution, amounted to fourteen, and had a revenue of one hundred and twenty-two pounds, eleven shillings and one penny, *per annum*. Here was also a house for leprous persons, as old as the reign of king John, but its revenues at the suppression were valued at no more than four marks a year. Malmesbury describing this town, says, it was surprizing to see what towering buildings were erected here, and how admirably contrived with winding stairs, by masons brought from Rome, in so much that it seemed to vie with the Roman pomp.

Hexham is at present about three furlongs in length; and is a well built bailiwick town, the civil government of which is by a bailiff, who is appointed by the lord of the manor, and is generally continued for life. He is an officer of great antiquity, and has the same power within his jurisdiction, as the mayor of a city, or a justice of peace within the county.

The market-place, which is a large square, well built and paved, stands in the center of the town. On the south side is a market-house on piazas, or stone pilasters, lately erected for the use of the town by Sir Walter Calverley Blacket, Bart. In the middle is a large fountain, with a reservoir under it of free-stone, and hewn work, erected at the charge of the inhabitants of that part of the town. The water which supplies it is brought for near a mile in pipes.

On the west side of the market-place are the remains of that celebrated and admired structure, the priory-church, or old cathedral, the best view of which is from the north-east. In the center on four strong pillars is a square tower; in which were fine musical bells, dedicated to the Blessed Virgin, St. Andrew, St. John and other saints. St. Mary's which was the largest, was commonly called the Fray-bell, being never rung alone, but on occasion of fire, the approach of an enemy, to raise the posse comitatus, or fray as it was termed. Andrew's bell was the next in size; called the Holy bell, being never used but for funerals. Eight new bells have for some time supplied their place.

The roof of the middle isle is lofty, lined with oak pannels within, and covered with lead without. The side isles are arched with stone; and the nave and cross isles are supported by pillars. In the walls are two rows of galleries one above the other. At the entrance into the choir is another gallery, in which formerly stood the organ. On the pannels are painted the representation of our blessed Lord and his apostles, and of the Virgin Mary. The choir is spacious, and the altar large; the latter was repaired by the late Sir William Blacket; as was the whole church by a brief, in the year 1725. The floor is mostly covered with ancient grave stones, which are still very entire. Many of them have been inlaid with brass, and others with croziers.

There are several monuments in the church, some of the most remarkable of which are the following: Near the north door on the right hand is a flat funeral stone, very antient. It has a crozier upon it, and this inscription:

HIC JACET THOMAS DE DIVILSTONE.

Under an arch, at the entrance of the north isle of the choir is an ancient monument, said to be the sculpture of Alswold, king of Northumberland, assassinated by Sigga, a factious lord of his court, at Cilchester, now Walwick-Chesters, September 23, 788.

In the north-east isle of the choir, is a monument erected to the memory of Sir Robert Ogle, of Ogle-

castle, with this inscription in a brass plate on black marble:

Hic jacet Robertus Ogle, filius Eleanoræ Bertram, filia
Roberti Bertram, militis qui obiit in vigilia omnium sanctorum,

Anno Domini, 1404. Cujus animæ propitiatur deus.

On another brass plate are engraved the arms of the two baronial houses of Bertram and Ogle, quartered.

In the choir near the reading-desk is a flat funeral stone of blue marble, to the memory of the Rev. and learned George Ritschel, a Bohemian by birth, and lecturer of Hexham. It bore the following inscription:

Sub hoc marmore sacrae reconduntur reliquæ
Georgii Ritschel, patria Bohemi,
Religione reformati: qui sæviante in protestantes
Ferdinando 2do. omnibus gentilitis
Hereditatibus exutus, sed Hegentorati
Lugduni Batavorum, aliarumque academiarum exter-
num, spoliis onustus

Denatus, 1683.

At the west end of St. Andrew's church are the remains of the ancient priory. It has been a spacious quadrangular building, with a large cloister. A few years ago the ambulatories were very conspicuous on the west side of the garden; as was likewise an oratory at the south-east corner, the roof of which was vaulted with stone, and supported by four Ionic columns.

In the twenty-fourth year of the reign of king Edward I. 1296, it was burnt by the Scots, together with the west end of the church and the school-house; and in the reign of Edward III. 1346, it was pillaged by David, king of Scots, who entered the borders by Liddel-castle, with forty thousand men.

They continued here three days; after which they departed without burning the town, which the inhabitants were in daily apprehension of their doing.

Part of the priory was repaired by Sir Reginald Carnaby, and has since been further repaired by Sir Walter Blacket; who has also made a pleasant gravel walk round a large field on the west side of it, which he has adorned with small clumps of forest trees planted at proper distances.

On the east side of the market-place is an antient stone-building with a clock in it, which was formerly the town-hall, or town court, belonging to the bishops and priests of Hexham, and is still put to the same use. The lord of the manor holds his court in it, and it is also the sessions-hall.

At a small distance from it is an old tower, which was antiently, and is still made use of for a town gaol. A little farther eastward is a grammar-school by queen Elizabeth, in the fourth year of her reign, 1598. The master's salary is twenty pounds, and the usher's four pounds, *per annum*. The school and a convenient dwelling house for the master were erected at the expence of the town and neighbourhood in 1684, and cost one hundred and fifty pounds. They are situated upon the brink of an eminence, which forms a fine natural terrace commanding a delightful prospect of the river Tyne, and the neighbouring seats and villages upon its banks.

This town has two weekly markets, held Tuesdays and Saturdays. The first is of chief note. Every Tues-

day fortnight, from the tenth of March to the tenth of December, is a market for horned cattle. Here are also two annual fairs, viz. on the twenty-fifth of July, and on St. Simon and St. Jude.

In Hexhamshire, on the plains, called the Levels, by the rivulet of Divil, a bloody battle was fought between the two houses of York and Lancaster, in 1463, and a decisive victory obtained by the general of the latter, the marquis of Montacute, who forced the intrenchments. The unfortunate king Henry hastened out of the field. His attendants were many of them taken; and himself with his queen and several of his partizans were abandoned to the most extreme misery.

Opposite to Hexham, on the north margin of the Tyne, is the Hermitage, formerly belonging to the priory of that town. It was then called Hamefhalg, that is the hamlet in the Halg, Haugh, or Vale. It was formerly surrounded with wood, and was the favourite recess of St. John of Beverly, to whom the church on the hill behind is dedicated. On the dissolution of that monastery it came to the crown, and was afterwards granted to John Coatsworth, Esq. From him it descended to his eldest son, who left it to his brother and his heirs; but he dying without heirs, it came to Dr. James Jurin, an eminent physician in London, and is at present in the possession of his widow, Mrs. Jurin. The front of the house was built by the late Mr. Coatsworth, of white free-stone and hewn-work. The back part and the offices were erected by Mr. Jurin, to whom the whole place is indebted for the genteel appearance it now makes.

To the east of the house is a small but neat garden, shaded by a clump of tall forest trees. Before it is a grass-lawn, adorned with small clumps of young trees, and extending to a terraced road by the banks of the river Tyne. To the north-west is a small pendent copse, or natural grove, through which is a terrace walk, at the termination of which is the church of St. John-lee, consisting at present of only one isle, in the jurisdiction of the see of York.

A little farther eastward, is Beaufront, the seat of John Errington, Esq; the situation of which is universally admired; being placed on the declivity of an eminence, shaded by a wood, from whence there is a most delightful prospect of the beautiful vale beneath, and the river beyond it.

Continuing our journey along the military road, we have on the left hand a fine view of Holy-den, that is, the Holy Den or Vale, famous for the victory obtained by Oswald, king of Northumberland, over the British usurper, Cedwall, who had slain his apostate brother, Ansfred, king of Bernicia, in a pitched battle. Oswald, to revenge his brother's death, and save his country from destruction, boldly marched at the head of a few brave troops to oppose the tyrant. He chose a convenient camp, which he fortified, and relying not on his own arm, but the justness of his cause, and the protection of heaven, he erected a cross before it. The enemy trusting to their superior numbers, advanced in full confidence of victory. Cedwall, transported with the thought of having ample vengeance on the humble Oswald, in person attacked his intrenchments; but his triumph was of short duration, for an arrow from the enemy met him and struck him dead on the spot. Terrified at his fall, his men in confusion began to retire; when Oswald seizing the fortunate moment, rushed upon them in their fright with his brave followers, and put them entirely to the rout. The field of battle was afterwards called Hefenfelth, that is, Heaven's-Field. The convent of Hexham afterwards erected a church on the top of a hill by the road side, and dedicated it to St. Oswald, to commemorate the blessings of that victory. It is still standing, and was lately repaired, being an appendage to the church of St. John-lee. Near the church was found a large silver coin of St. Oswald; his head is represented on one side, sceptered, and the cross on the other.

In the same vale is a village called Halyton, and Hallyngton, which signifies the Holy Town; in the demesnes of which is a neat modern structure of white free-

stone calleed Halyton-Mefnes, the seat of Ralph Soulsby, Esq. Before it is a grass area extending to the brink of a deep gill, wherein is a small stream, which falls a little below into Erring-barn.

A mile and a half east from Halyton is a hill with a square intrenchment; and a hearth-stone in the center; round which is a trench, called the Mote-law, which implies the hill, for observing the motions of an enemy, and giving an alarm by fire on any imminent danger.

From hence we have a view of Little Bavington, the seat of the antient family of the Shaftoes, now in the possession of George Shaftoe Deleval, Esq; who has made considerable additions and improvements, by erecting new buildings, and raising plantations, and hedge rows. To the south-west, on an eminence, is an artificial ruin; and to the south is a large and beautiful piece of water, by the side of a bank planted with forest trees, at the end of which is a tempiato.

About a mile from Bavington is Port-gate, situated on a hill. Near it is a farm-house; round which, the very foundations of the Roman wall, and foss, have been dug up, plowed, and sown with corn.

A little below Port-gate, we came to the Hermenstreet, which derived its name from Hermes Mercurius, the god of the high ways, and Custos Manium. It is more generally known by the name of Watling-street. It crosses the Tyne at the Roman station, Corchester, by the ostium of the streamlet Cor, famous for the Roman curiosities and antiquities found at it. It contains several acres, and a small space within it called Corbew is supposed to have been the Prætorium.

The Romans had a stone bridge over the Tyne at this station, the structure of which must have been very curious, because the velocity of the current is very rapid, especially when swelled with sudden rains, or melted snows from the neighbouring mountains. They were indeed careful in making the arches of their bridges over such streams very large, and to form them with the greatest geometrical accuracy. The pillars are multangular; the base of each secured by horizontal arches, gradually contracted; every stone in them is of a vast length, placed wedge-like, and laid level with the water. In the upper part of the pillars were apertures or openings to give a passage to impetuous and raging floods.

About a quarter of a mile east from Corchester is Corbridge, an antient borough, situated on the north banks of the Tyne, crossed by a bridge of seven arches. This manor was anciently granted by the crown to Robert Claving, baron of Warkworth, with the privileges of sending two members to parliament, having an annual fair, and a weekly market; all which have been long since disused. The manor is now in the possession of his grace the duke of Northumberland.

Corbridge is a large, populous, well built village. The church is an antient structure dedicated to St. Andrew. Under an arch at the end of the north isle is a grave-stone with the following inscription:

hIC IACONt I zORRIS ASLINI FILIUS huGO.

On the south side of the church is an old tower, which was the town-gaol; and near it is the market-cross now disused.

In March 1735, a large piece of Roman plate was found in the bottom of an inclosure on the south side of the town, by the river Tyne. It was discovered in a boggy place by a little girl belonging to a smith, who was at play with more children. The raised work and figures upon it induced the children to carry it home to the smiths, who perceiving it to be a thing of value, took care of it, and carried it to Newcastle, where he sold it to a goldsmith of that town; but the duke of Somerset hearing of it, he, as lord of the manor, claimed it as his property. It weighs one hundred and forty-eight ounces, and is in shape like a tea board. It measures twenty inches long and fifteen board, is hollowed about an inch deep, with a flat brim an inch and a quarter broad, neatly flowered, with a vine, grapes, &c. Under the middle of it was a low frame; about seven inches long, four broad and one and a half deep. The ingenious Roger Gale, Esq; of Newcastle has given us the following account of this curious piece of antiquity.

“ I shall

"I shall begin, says that learned antiquary, from the right hand of the plate as you look at it, where Apollo, the principal figure in the whole, is placed under a small temple, supported by two wreathed columns with flowered capitals, almost naked, having only a pallicum hanging down from his left shoulder over his back. In the same hand is his bow, which he holds up towards the top of the column on that side; his hand is extended downwards, with a branch in it, perhaps of laurel, crosses the other pillar, against which rises a pyramidal pile of seven pieces, besides the top; but for what it is intended I must confess my ignorance. Against the basis of the left hand column rests a lyre, the form of which is truly antique. Beneath it grows a plant with three spreading flowers upon its three extremities, designed, as I believe for a heliotrope; and close by it couches a griffin, with its wings elevated over its back. The ancients had a high opinion of the sagacity of this fictitious animal, and therefore consecrated it to their god of wisdom. In Bergerus's Thesaurus Palatin, is a medal of Commodus, the reverse whereof is Apollo in a chariot drawn by two griffins; and the poet Claudian alludes to his riding thus in the following distich:

"At si Phœbus adest, et frenis Grypha jugalem

"Riphæo, Tripodos repetens detorsit ab exis, &c.

Close to the right-hand column, and this pyramidal pile, sits a woman upon a square footed stool, though no more than two of its legs are visible: she looks backwards over her left shoulder towards Apollo; is wrapt up in a long garment, or stola, from head to foot, and veiled: by this dress and attire, and an altar with an eternal fire burning upon it just by her, which was brought with her from Troy: I take her to be Vesta.

"—— Manibus vittas, Vestamque patentem,

"Æternum Adytis affert penetralibus ignem.

Virg.

"Et vos virginea lucentis semper in arâ

"Laomidontæ Trojana altaria flammæ.

Sil. Ital.

"The next is a woman, erect, her hair gathered up and tied with a knot behind; upon her forehead rises a tutulus, and she is habited in a stola from the shoulders to the ground. Her right arm is wrapped up across her breast in her garb, the hand only appearing out of it; in her left hand she holds a spear, the shaft twisted, the iron of it somewhat obtuse. This seems to be the only human figure in the company; but a very learned gentleman of my acquaintance thinks it may be designed for Juno, who is often thus accoutred with a spear. If so, it must be the Juno Curis, or Juno hastata; we have it from Ovid,

"—— Quod hasta curis prisca est dicta Sabinis.

She was the same with Juno Pronuba.—Celebri hasta nubentis caput cometur, vel quia Junonis Curitis in tutela esset, vel ut fortes viros ominaretur.—But as there is no peacock, or any other attributes of her divinity attending her, and her appearance no ways majestic, nor adequate to the

"—— Divum Regina, Jovisque

"Et soror et conjux——

I cannot be entirely of his opinion, especially as she follows, and seems to be an attendant of the next figure, which is

"Pallas, Galea effulgens et Gorgone sævâ, the head of that monster as usual, being fixed upon her breast. In her left hand she holds a sharp pointed spear, her right is extended towards Diana, with whom she seems engaged in very earnest discourse, to which also that other goddess is very attentive. She is

"The last figure of the group (though called a man in all the accounts I have seen of this table) is represented here as the Diana Venatrix by the feminine dress of her head, tucked up with a knot behind, like the hair of the third figure; but the bow in her left, and the arrow in her right hand; her short Tunica, which reaches down a little more than to the middle of her thighs, and her buskins that come up no higher than the calf of her leg, have occasioned this mistake of her sex; but Ovid,

"Talia fuccincta pinguntur crura Dianæ

"Cum sequitur fortes, fortior ipsa, feras.

"Between the two figures of Pallas and Diana, rises a tall slender tree, with a crooked waving stem, the branches of which are displayed at the top almost over two thirds of the plate. On the main branch is perched an Eagle, with one wing expanded. This is of raised solid work like the rest of the figures, but there are several small birds fitting among the boughs that are only punched, or cut in with a tool, as are also several festoons hanging down from the tree, and other little shrubs and flowers interspersed all over the area of the table. The great bird sitting directly over the head of Pallas, and the attendance of the little birds about it, made me think it was her owl, till I had seen the original, which convinced me, that it can be designed for nothing but an eagle.

"Under this tree stands an altar, and so close to Diana, that she holds her left hand and bow over it. It is but a small one, and has nothing upon it but a small globular body, perhaps a mass of the libamina ex farre, melle, et oleo.

"I should have told you that below the feet of Pallas grows a plant that seems to bear two ears of corn upon a stalk, but cannot say what it is, or how it belongs to her: beneath the tree and the little altar, stands a thin-gutted dog, like a grey-hound, his nose turned up in a howling or barking posture, as often exhibited with this goddess on medals, and in other representations of her, some

"—— acutæ vocis Hylæctor

"Aut substricta gerens Sicyonius Iliæ sudor.

Ovid.

"Under her in the very corner of the plate rises a rock, upon which she sets her left foot, and against the side of it lies an urn with its mouth downwards, discharging a plentiful stream of water. As she stands upon this rock, or hill, and so near to this spreading tree, I cannot but think of Horace's address to her——

"Montium custos nemorumque; virgo.

"The whole table is encompassed with a border, raised near an inch high, and ornamented with a creeping vine; the grape and leaves are in relievo, but the stalk only tooled.

"The work of this curious piece is neither of the best nor worst of times; the figure of Vesta, particularly, is extremely well executed, the posture very free, the drapery soft and easy; and what is very remarkable, the insita, or border, an ornament of stola, appropriated to the Roman ladies of quality,

"Quorum subsuta talos tegit insita veste,

Hor.

is neatly worked all round this our vesta: nor is the next figure much inferior. I cannot, nor any body else that has seen it, discover that the plan has any relation to any story in the Heathen mythology, but seems only an assemblage of the deities it represents. This may be some argument of its antiquity; for had a modern workman had the designing of it, he would in all probability have taken some known piece of history for his subject: to which I may add that all the symbols are genuine, and truly adapted to their owners.

"I once thought it might have been the cover of an acerra, but the foot which supports it puts an end to that surmise. We do not well know what the anclabris was; the definition of it is in Festus, Mensa divinæ ministeriis apta, dicebantur autem anclabria et anclabris, ab ancolare quod erat ministrare.—This is big enough to contain the exta of a sheep, and other small victims, which seems to me the likeliest employment for it: and that it was one of those sacrificing utensils that Virgil more than once calls lances.

"Lancibus et pandis fumantia reddimus extra.

"—— Lancæque et liba feremus.

"Dona ferunt, cumulantque oneratis lancibus aras.

"The lances were round and square; the discus used in sacrifices for the same purpose, seems to have been always round."

Two famous altars, with Greek inscriptions, were found in Corbridge church-yard; one in honour of the

Tyrian

Perfoliate-grass of Parnassus, *Gramen Parnassium*, Ger. In moist sandy places and about bogs.

Yellow star of Bethlehem, *Ornithogalum luteum*, C. B. Found in great abundance in the wood bottom, at the west end of the Rectory Den at Simonburn.

Great toothwort, *Orobancha radice dentata major*, C. B. Found in the same place as the above plant.

Moonwort, *Lunaria*, Dod. In dry hilly pastures, on both sides of the Roman wall, at Tower-tay, near Wallwick.

English black maiden-hair, *Polytricum officinarum*, C. B. Found frequently about the alpine rocks.

Black maiden-hair, *Adiantum nigrum*, I. B. Is frequently at the roots of trees, and about moist rocks.

White maiden-hair, wall-rue, or tent-wort, *Adiantum album*, Diosc. Found on both sides the Tyne at Corbridge, but sparingly.

REMARKS on the SEA-COASTS of Northumberland.

The sea-coasts of this county are in general very high land, bordered with sands, and rocks. The mouth of the Tyne, the principal harbour in the county, is dangerous to strangers, on account of a bar that stretches across to the mouth of the river, and a very considerable ledge of rock, stretching off from Tinmouth-castle, situated on a pretty high hill on the north side of the harbour's mouth. There water is only seven feet deep upon the bar at low water; but the tide rising fourteen feet perpendicular, there is water sufficient for large ships to pass the bar at high water. Ships that make the harbour at low water, generally come to an anchor in the road, about a mile to the eastward of the bar, in order to wait till there is water sufficient for entering the harbour. There are two light-houses erected for directing ships to sail over the bar in the night. The one is called the low-light, from being erected on a low spot of ground on the northern bank of the river; the other, which is about half a mile distant on the same side of the river, is called the high-light, from its standing on higher ground than the former. Ships in the road sail safely over the bar by keeping these two lights in one.

The ledge of rocks already mentioned before Tinmouth-castle renders the north-side of the harbour very dangerous. The outermost rock, called the Sparrow-hawk, is near half a mile from the shore. A light-house is erected on the edge of the precipice at Tinmouth-castle, to prevent ships in the night from running on these rocks.

From the mouth of the Tyne to Seaton-sluiice, which is about six miles, the shore is bordered with rocks, but they are too near the land to be dangerous; except at the southern point of Seaton sluiice, where they extend to a considerable distance.

About three miles to the northward of Seaton-sluiice, is Blyth harbour. Between these two ports the coast is bordered with sand-hills, and a flat sand extends half a mile from the beach. From the northern point of the harbour a very dangerous ledge of rocks extends above a mile from the shore; the tops of the rocks are dry at low water. Three beacons, on which lights are kept burning in the night, are erected at the mouth of the harbour; one at the extremity of the ledge of rocks above-mentioned, and the two others on the margin of the flat sand on the south side of the harbour. The entrance of the harbour is narrow, and there is not above seven feet at low water: the tide rises ten feet. At Blyth-key there is about five feet at low water. The road is about a mile and a half south-east from the beacon erected on the rocks. Ships come to an anchor there in five fathom water; the bottom is an oozy-sand. There are two beacons erected on the sand-hills to direct vessels to sail from the road into the harbour.

About a quarter of a mile to the eastward of the beacon is a ledge of rocks, called Seaton Scarrs; and

about half a mile to the north-east of the Scarrs is another ledge, called the Sow and pigs. These rocks appear at low water, though there are five fathoms water close to the ledge.

About three miles to the north-east of the Sow and pigs, and about half a mile to the south-east of the mouth of the little river Camos, is another cluster of rocks, called Camos ridge. The tops of the rocks are dry at low water; but as this part of the coast is rarely frequented unless by small vessels which enter the mouth of the Camos, the danger is much less than it would otherwise be.

The coast has nothing remarkable from hence to Sunderland point, except the mouths of the rivers Wentf-beach, Coquet, and Alne, which are entered by small vessels, there not being water sufficient for ships of burden.

At Sunderland point there is a considerable ledge of rocks, extending near half a mile from the shore; part of these rocks are dry at low water.

About a mile north-west from Sunderland-point is a large ledge of rocks, called the Scars. These rocks are about a quarter of a mile from the low-water mark, extend near half a mile in length, and are dry at low-water.

About a mile and a half north-east from this ledge are the Fern Islands; on the north-east point of the largest of which is a light-house; and about the same distance, and nearly in the same direction, are several rocky islands, called the Staples, or Scarre-head. Ships may pass between these two islands, but there lies in the middle of the channel a cluster of dangerous rocks, called Oakscar.

Between the Ferne islands and the Scarrs is a road for ships, called Skate road, which is sheltered from all winds between the south-east and north-west; while the Ferne islands and the Staples break off the northerly winds. There is from five to eight fathoms water in this road.

There is a good bay where ships may safely ride in westerly winds, between Bamborough-castle and Holy island. There the water is from three to seven fathoms deep, and the bottom a fine sand.

Holy-island, except the eastern side, is surrounded with rocks and sand. Between the south side and the main land is a very good harbour, where coasting vessels may ride safe in all winds.

About half a mile from the shore of the south-east point of the island, is a crag, called the Plough, on the north side of which is a cluster of rocks. And a mile and a quarter farther to the eastward is a rocky precipice, called Gould-stone, close to which there is five fathoms water.

Seven miles to the north-ward of Holy-island is the mouth of the Tweed, on the north side of which the town of Berwick is situated. The harbour, or mouth of the Tweed, has from six to twelve feet at low water; and as the tide rises about twelve feet, there is water sufficient for vessels of considerable burden to pass in and out of the harbour. The sand extends a considerable distance from the high-water mark on the north side of the harbour; but to prevent any danger three beacons are erected at the low-water-mark of this sand; so that ships may pass in and out with great safety.

The road is about half a mile to the south-east of the bar, where ships come to anchor in five fathom water; the bottom, a fine sand.

MEMBERS of PARLIAMENT for Northumberland.

This county sends eight members to parliament; two knights of the shire for the county, and two burgesses for the following towns, Newcastle, Morpeth, and Berwick upon Tweed.

his house. The pavement was not in chequer-work or mosaic, but in unequal irregular figures, red and white, of a composition of calx viva, and broken brick, resembling a pebble-marble.

At this station were likewise found two small Roman mill-stones, one of rag-stone, the other factitious, of potters work of a blueish ash colour. A small drinking cup of Roman pottery was also dug up, and the neck and handle of a cruise, of brown pottery unglazed, was found at the same time.

The village of Benwell antiently belonged to Richard de Benwell. The present lord of the manor is Robert Shaftoe, Esq; whose seat stands at the east end of the village, on a sloping eminence. On the east side of the house is a park-like inclosure, with small clumps of trees. On the west is a winding walk through a shrubbery and plantation to a Chinese cottage, and near it a tempeato, from which we have a fine view of the vale below, of the river Tyne, and of the little island formed by it, called the king's meadows, and of the handsome seat of Sir Thomas Clevering of Axwell Park, Bart. on the side of a shady hill. Before the south front is a grass area, from which the towering pyramid rising through the trees of Gibside, above the banks of the river Derwent, terminates this beautiful prospect.

We now pass on to Benwell-hill, where the military road goes through the station; on the left hand of which is that part of it called Chapel-hill, lately dug up for the sake of the stones.

A little beyond this station, a road branches off to Fenham, the manor of which, with the manor and lands of Threpwood, near Hayden-bridge, belonged to the priory of the knights hospitallers of St. John of Jerusalem. Fenham was afterwards in the possession of the antient family of the Riddel, and is now the manor and seat of William Ord, Esq. The house is a large, modern, handsome structure, the east front of which commands a most beautiful and extensive prospect.

Not far distant from hence is Elswick, a small village on a pleasant slope which belonged formerly to the priory of Tynemouth, and after the reformation was in the possession of the Jennison's. It is now the seat and lordship of John Hodgson, Esq. Before the south front of the house, which is an antient edifice, is a terrace extending east and west a considerable length, with a dwarf-wall before it. The admired pinnacle of St. Nicholas's steeple of Newcastle, the artificial ruin on the hill at Biker, the church and town of Gatehead, all contribute to form a most pleasing prospect to the east. To the south, the grounds are beautifully sloping to the river Tyne, beyond which is a fine opening into the inclosed and shady vale of Lamsley, in the bishoprick of Durham, gradually enlarging, till the castles of Ravensworth and Lumley discover themselves to the sight.

Curious PLANTS found in Northumberland.

The dwarf honey-suckle, *Periclymenum humile*, C. B. On the west side of the north end of the highest of Cheviot-hills, in great plenty.

The sea-bugloss, *Echinum marinum*, B. P. At Scrammerston-hills, between the salt-pans and Berwick, on the sea-beech, about a mile and a half from Berwick.

The lesser smooth broad-leaved coddled willow-herb, *Lythmachia siliquosa glabra minor latifolia*. On Cheviot-hills, by the springs and rivulets of water.

Winter-green with chick-weed flowers, *Pyrola asines flore Europaea*, C. B. On the other side of the Picts-wall, five miles beyond Hexham northwards; and among the heath upon the moist mountains, not far from Harbottle westward.

Horse-radish, *Rhaphanus rusticanus*, Ger. About Alnwick, and elsewhere in this county, in the ditches, and by the water-sides, growing in great plenty.

Common eryngo of the Midland, *Eryngium vulgare*, J. B. On the shore called Friar-goose, near Newcastle-upon-Tyne.

Marsh-Elder, *Sambucus aquatica*, I. B. Found in moist woods plentifully.

Dwarf-Elder, Walwort or Danewort, *Ebulus sive Sambucus humilis*, Ger. On the west side of the church-yard-wall at Chatton, by the river Till.

The *Enonymus*, a plant of which there is no English name, found at the west end of the rectory-wood at Simonburn.

Upright juniper, *Juniperus vulgaris arbor*, C. B. Among the bushes and trees on the banks of the Tyne near Ryding, below Hexham.

Procumbent alpine juniper, *Juniperus montana Casalp.* On barren heaths: On Broad-pool-Common, near Simonburn.

The perennial-leaved arbutus, *Uva Ursi Clus.* Found in the duke of Portland's wood, near Hexham, plentifully.

Tuberous Moschatel, or Musk-wood Crowfoot, *Muschatellina foliis subaræ bulbosæ*, I. B. Found about moist hedges, and on the borders of woods.

Bay-leaved, sweet-scented willow, *Salix folio laureo sive lato glabro odorato*, Ray. In moist hedges and meadows, and about ditch-banks. In the Roman foss between Shewing-sheels and Carraw.

The lesser Burnet, *Sanguisorba minor*, Matth. Plentiful in mountainous pastures, especially in a limestone soil.

Procumbent wild liquorice, or liquorice-vetch, *Glycyrrhiza sylvestris quorundam*, I. B. Found on dry banks, and in great abundance on the summit of a hill called Cockle-hill at Learmouth, near Cornhill.

Perennial, yellow, horned sea-poppy, *Papaver cornutum*, Matth. Found plentifully at the west end of Willington-quay, near Howden-pens.

Samphire, *Crithmam marinam*, Ray. On the sea-rocks near Alnmonth, plentifully.

Sharp-pointed-leaved stone crop, *Sedum minus luteum folio acuto*, C. B. Found on old walls, and about rocks, particularly on an old wall at Lipwood, near Hayden-bridge.

The great marsh valerian, *Valeriana sylvestris magna aquatica*, I. B. Found plentifully by water-courtes, about bogs, and in damp woods.

Narrow-leaved mountain valerian, *Valeriana sylvestris foliis angustioribus*, Vaill. On the borders of Ramshaw-wood, near the mill, by Warkburn, in Tynedale.

The small bog valerian, *Valeriana aquatica minor*, Ray. Found frequently in wet mountainous meadows, and about bogs.

The purple-flowered saw-wort, *Serratula purpurea*, Ger. A scarce plant, found at West-Dibden, near Hexham.

The golden rod, *Virga aurea*, Ger. Frequently on the strands of alpine brooks, and about rocks.

Purple-flowered yarrow, or millfoil, *Millefolium purpurei floris*, Dod. Found by the way-sides, and on new ditch banks.

Dropwort, *Filipendula*, Matth. In great plenty in a pasture called the Crag-clofe, in the road to Chipchace.

Melilot, *Melilotus vulgaris*, Park. Found on the banks of the river Wansbeck, by a grindstone quarry near Ashington.

Dwarf cistus, or little sun-flower, *Helianthemum anglicum luteum*, Ger. In dry mountainous pastures, and by way-sides in gravelly places.

Thyme-leaved cestus, or little sun-flower, *Chamaecistus serpyllifolia*, Clus. On the Roman-wall above the rocks, by Crag-lake.

Male speedwell, fluellin, or true Paul's betony, *Veronica mas sapina et vulgatissima*, C. B. In woods and about shadowy rocks.

Maiden pink, *Caryophyllus montanus*. Found commonly on dry banks, and in barren pastures.

Purple flowered centaury, *Centaureum minus flore purpureo*, I. B. Frequent in dry hilly pastures.

Short, bushy, annual centaury, with bright purple flowers, *Centaureum minimum purpureum ramosum*, Martyn Tourn. Found frequently in the wood at Simonburn.

Yellow centaury, *Centaureum luteum*, Clus. Frequently in dry hilly pastures, about a quarter of a mile west from Honeyclugh-crag, near Chester-wood, on South Tyne.

On the west side of the market cross stands the church, consisting of three isles, and a gallery at the west end. In the north wall of the chancel, in a niche, is the effigies in stone of a knight templar in the habit of his order, supposed to have been one of the Fenwicks of Fenwick tower.

On the south side of the church is the vicarage-house, lately repaired, with considerable additions, after an elegant design by the Rev. Thomas Dockwray, D. D. the present incumbent; over the south entrance is the following inscription.

ÆDES HASCÆ REFEKIT THOMAS
DOCKWRAY.
MDCCLXII.

The house and gardens contain about five acres; the latter has been entirely new modelled after a genteel taste by Dr. Dockwray, and has in it a hot well, eighty feet long. Before the house is a fine terrace walk extending a considerable length east and west. On an irregular grass-lawn below it is a mount of flowers, with borders of flowers, and shrubs, encompassed by the Pont. To the west is a variety of walks, some of them under an evergreen shade. To the east a small island is formed by the Pont, over which is a new stone bridge of two arches; and on its southern banks is a grove of tall forest trees. The prospects from this seat are various and beautiful.

A mile east from Stamfordham, on the south side of the Pont, is Cheesburn-Grange, the manor of which formerly belonged to the priory of Hexham. It was the seat and estate of Gawen Swinburn, Esq; and is at present possessed by Ralph Riddel, Esq;

A mile and a half from Welton-burn is Harlow-hill, a small village situated on an eminence; at the south-west end of which a road branches off to Ovingham, a village on the banks of the Tyne, where was formerly a religious house of the foundation and endowment of ——— Humfravil, Baron of Prudhow, for three black canons, subordinate to the priory of Hexham. He gave it the advowson and appropriation of Ovingham. At the dissolution its annual revenues were valued at eleven pounds, two shillings and eight-pence. The situation is exceedingly pleasant, the river Tyne gliding under it by a hanging garden, with terraces one above the other, having the ruins of the castle of Prudhow, and of the chapel of our lady belonging to it in full view.

Opposite to the house of Black canons, on the north side, is the church, in the cathedral-form, solemn and lofty within. In the tower are three bells, and near it a very neat vestry. On the north side of the chancel is a beautiful tomb of black marble, whereon is cut the coat armoial of the Addisons, without any inscription.

On the south side of the chancel is a flat sepulchral stone of blue marble, which bears the following inscription:

Here lies the corpse of a rare man interr'd,
On whom both wit and learning God conferr'd
To his great good: for all his works did tend
To God the object of his acts and end.
His abstract was from a religious race;
To which his proper virtue added grace.
Was happy in his wife, his children seven:
Of which the prime did follow him to heav'n.
A virtuous girl, above her age was she,
Of sin's foul deeds and vile contagion free.
With credit great, whilst he Lord Percy serv'd,
Of high, of low, of all he well deserv'd.
He could get wealth, but got, he cared not for it.
And to conclude; he us'd things transitory,
As means to bring him to eternal glory.

William Ourd, Esq; departed this life the twenty-seventh of April, 1630; and his daughter the twentieth of December, 1631.

On the south side of the Tyne, and on the brow of a hill opposite to Ovingham, is Prudhow-castle, formerly the barony of the ancient family of the Humfravils; but at present in the possession of his grace the duke of Northumberland. The castle and chapel of our lady at the foot of the hill, are now both in ruins.

From Prudhow-castle, a road branches off on the right to Wylam, a populous village, which belonged to the priory of Tynemouth, at the west end of which is Wylam-hall, the seat of John Blacket, Esq; who has made a handsome road for a mile in length, on the west side of his house leading from Ovingham, like a terrace. A bank of wood on one side, and the river Tyne on the other, renders this road exceedingly pleasant and romantic.

On the right hand from hence is the Roman station Vindobala, or Rouchester. A few years ago a sculpture of Hercules in rag stone was dug up here by some labourers. Two Roman Fibulæ have also been dug up, both of silver.

In the beginning of the year 1766, two men being employed in digging up the foundation of a fence near this station, found a large quantity of Roman coins in a small urn, which they disposed of to different people in and about Newcastle for their weight of our own money, which coming to the knowledge of the lord of the manor, he claimed them as trenture-trove, and recovered near five hundred silver and sixteen gold coins; almost a compleat series of those of the higher empire; and among them several Otho's, most of which were in fine preservation.

In the same year a coffin hewn out of a rock was discovered in digging near the same place, about twelve feet long, four broad, and two deep; a hole close to the bottom at one end; a transverse partition of stone and lime, about three feet from the other end; and many decayed bones, teeth, and vertebræ in it, supposed by their shape and size to be the remains of some animal, sacrificed to Hercules.

At the foot of this station is, Rouchester-tower, the seat and manor of Robert de Rouchester, now in the possession of William Archdeacon, Esq; and at a small distance from hence is the village of Heddon on the Wall; on the south-west side of which is a fine view of Close-House, the seat of Robert Bewick, Esq;

It is situated on the side of a shady hill, having an antient chapel at the east end, and a tower at the other. Before it is a sloping lawn, and near it a small islet, with three or four tall oaks growing upon it. The river Tyne, the inclosures, the clumps of trees all beautifully dispersed, form a very agreeable prospect, which is finely diversified with the handsome seat of John Symson, Esq; at Bradley, the village and church of Newburn. But perhaps the greatest beauty in the whole is the flexure of the river, over which the spire of Ryton church appears like a stately column or obelisque.

At some distance from hence a road breaks off to Newburn, an ancient borough situated on the banks of the Tyne, and formerly belonged to Robert de Clavering, baron of Warkwork, and now in the possession of the duke of Northumberland. It is a small village, and inhabited chiefly by persons employed in the coal works, and carrying timber and goods down the river in boats.

The church is at the north-west end on a rising ground, in the form of a cross, with a small tower. In the chancel on the north side of the altar against the wall is a tomb of blue marble, erected to the memory of Sir John Delaval and his family.

One of the favourite lords of king William I. named Coppi, was slain as he was entering this church by Osulf, his competitor for the government of Northumberland, who was soon after run through the body with a spear, and killed by a thief, who he was endeavouring to seize.

At this village, Lord Conway, at the head of one thousand two hundred horse, and two thousand foot, opposed the passage of the Scots over the river Tyne, under general Lesley, in the reign of king Charles I. 1640. The foot by a smart fire from under a breast-work, forced three hundred Scotch troopers to repass the river; but on the discharge of nine pieces of ordnance, concealed the night before by Lesley in some brush-wood, they cast down their arms and ran away.

On the right hand is the Roman station Condercum, or Benwell. A Roman sudatory was discovered here a few years ago by Robert Shaftoe, Esq; in a field near his

Tyrian Hercules, dedicated to Diadora the priestess; large, hollow at top, as usual for incense.

HEPAKAEI

TO YAXEPM
ANEΘHKEN.

Marcus Escaft, the son of Acheram, dedicates this altar to Astarte. He supposes these names to be Syrian, Arabic, or Punic. Marcus the Prenomen to be adoptive, to Romanize; and that he is the priest who set up the altar.

That of Hercules was published by Mr. Horsley, who esteemed it one of the greatest curiosities of the kind in Britain.

We continued our journey eastward from Corbridge, on the military road, and came next to the Roman station, Hunnum, or Hulton-Chesters, situated on the summit of a hill. As some labourers were turning up its foundations for the sake of the stones to mend the road, they found a centurial stone with the following inscription within a civic garland, the crest of the imperial eagle at each end:

LEG. II. AVG.
F.

They also found one of those instruments, called, Extiopicia, used by the Auspices in examining the bowels of animals. It was in the form of a pencil, or Roman stylus, of wood, very hard.

They found another centurial stone, broken off at one corner, inscribed:

LEG. XX. VV.
HORIENS.
PROCUL.

This legion performed an annual solemn sacrifice of a hog or a bear to Ops, the Earth, and to Ceres, after harvest in grateful return for it.

Many stags horns, lying by heaps of muscle-shells were dug up at the same time; also some small copper coins of Constantine, and his two sons, and of the two usurpers Magnentius and Decentius.

A silver coin of Nero's was found at or near this station; and many urns, both of fine and coarse pottery, have been dug up.

At a small distance from this station is Halton-tower, antiently the seat and manor of the Haltons, and afterwards of the Carnaby's. In one of the rooms adjoining to the tower is preserved an old sword belonging to the latter family, sixty-four inches long. We are informed by Cæsar, that the Gauls used such swords in their wars with the Romans. The Roman general Camillus, in order to guard against such destructive weapons, formed an iron shield of a round form, adorned with studs of brass.

It was afterwards purchased by John Douglas, of Newcastle upon Tyne, Esq; who, in the year 1706, began a subscription for rebuilding the old parochial chapel. It stands at a small distance to the eastward of the tower. The estate is now in the possession of Sir Edward Blacket, Bart.

Halton-tower is small, of a square form, and has two speculating towers on the top, covered with lead. It is situated on the east side of a small stream, above a bank of tall forest trees.

About a mile to the southward of Halton-tower is Hoydon-castle; originally the seat of Emma d'Ayden, a rich heiress, but is at present in the possession of Sir Edward Blacket. The castle stands on the western declivity of a steep precipice. It has been a large and strong building, but the greater part of it is now in ruins. It is encompassed with a high stone wall, pierced with narrow-holes. Within this enclosure is a stable built entirely with stone, the roof is arched, and the very mangers are stone.

Near Aydon, a stone was dug up, engraved with the figure of a man lying on his bed, and inscribed as follows: NORICI. AN. XXX.—ESSEIRVS MAGNVS FRATER EIVS DVPL. ALX. SABINIANÆ. M. MARIVS VILLI A LONGVS AQVIS HANC POSVIT V. S. L. M.

At some distance from Aydon, on the military way, a road branches off on the left hand to West Matfel, antiently the manor of Philip d'Ulcot; but at present belongs to Sir Edward Blacket, whose seat is a neat stone building on a rising ground. Before the house is a small grass slope, terminated by the rivulet of Pontre, crossed here by a small bridge. Before the house is a beautiful vista, extending two miles to the military road. To the east is a walk of considerable length, bordered with trees and flowering shrubs.

About three quarters of a mile from the house, on the east side of the vista, is a circular mount, with a round cavity in the middle, of the form of the Celtic temples. On the edge of the cavity is a large stone pillar, nine feet high above the ground. It is a flat stone, three feet broad, and one foot and a half thick. Some workmen in digging here for stone discovered two stone chests, or coffins, consisting of four slabs placed edgewise, with a stone bottom and cover, containing the ashes of the dead, appearing like a white dust.

About half a mile from West-Matfel, a road branches off on the right to Bywell, the ancient barony of Hugh de Baliol; but at present in the possession of William Fenwick, Esq. The seat is at the west end of the village. It is a genteel structure, after a design in Mr. Pain's architecture, and built of white free-stone. It stands in a delightful valley, on the banks of the Tyne. The south front has a grass lawn before it, bounded by a dwarf wall, between which and the river is the road. The south bank of the stream is adorned with stately oaks, and other forest trees, interspersed with statues.

At a small distance on the banks of the Tyne, are the ruins of the old baronial castle, and on the southern margin of the stream, those of the old domestic chapel.

One Robinson, a mason, fishing in the Tyne after a fall of rain, in the year 1760, found a small silver cup, as it was rolling down the stream. It was of a Roman fabric, and round the brim the following inscription:

DESIDERI VIVAS.

On the other side of the Tyne, on the banks of the Derwent, is the abbey of Blanchland, founded by Walter de Bolbeck, in the year 1175, and dedicated to the Blessed Virgin, for twelve præmonstratensian canons, but with liberty to increase that number on obtaining the consent of the bishop of Durham. It had fourteen canons at the suppression, when its annual revenues were valued at forty-four pounds, nine shillings and one penny.

About a mile farther, on the right side of the river, a road branches off to Welton-tower, remarkable for being the place where Sigebert, king of the East Saxons, and Penda, king of the Mercians, together with all their great lords and attendants, were baptized by Finan, bishop of Lindisfern. The tower stands on a rising ground, only a field's length from the Roman wall.

About a mile and a half from Wetton-tower is Stamfordham, a pleasant, well-built village on the bank of the Pont. This manor antiently belonged to Sir William de Hilton, and was by him granted to Sir William de Swinburn; and is at present in the possession of Sir Edward Swinburn, of Can Heaton, Bart.

Stamfordham consists of one long, wide, sloping street; in the center of which is a covered market-cross; with a square pinnacle at the top, and on the east side of it this inscription:

Erected by Sir John Swinburn, Bart. 1736.

On the other side is his coat armorial. Opposite to the market-cross is a free school, founded and endowed by Sir Thomas Widdrington, Knight, in the year 1663. It is pleasantly situated at the east end of the town; and has a yearly income of eighty pounds.

C U M B E R L A N D:

THIS county is bounded by the Irish sea on the west, by part of Scotland on the north, by Northumberland, Durham, and Westmoreland on the east, and by Lancashire, and the Irish sea on the south. It is about fifty five miles from north to south, thirty-eight, from east to west, and one hundred and sixty in circumference. It is divided into five principal parts, called wards, a district equivalent to hundreds and wapentakes in other counties. It contains one city, fourteen market-towns, fifty-eight parish churches, besides chapels, about fourteen thousand eight hundred and twenty-five houses, and eighty thousand inhabitants. It lies in the province of York, part in the diocese of Chester, and part in Carlisle: and Kefwick, a market-town, and the nearest to the middle of the county, is two hundred and eighty-three miles north-west from London.

The first inhabitants of Cumberland called themselves Kumbri, Cumbri, or Kambri, but they were in common with the inhabitants of Yorkshire, Lancashire, Durham, and Westmoreland, called by Ptolemy the Brigantes. The name Brigantes is thought by some to have been given them upon a supposition, that they came originally from the city of Brigantia in Spain. Others are of opinion that Brigantes is formed of a Belgic word, which signifies Free-hands; and Camden remarks, that in his time it was common to say of a resolute, restless, and intruding fellow, that he played the Brigans. Brigand is at this day French for Robber, whence a pirate's ship was called Brigantine; a name afterwards given to light vessels, that were built both for rowing and sailing, with two masts and square sails.

The nation of the Brigantes, known by the name of Cumbri, are supposed not to have been subjugated by the Romans till the time of Vespasian, from which time their country was the constant residence of several Roman legions, who not only kept the inhabitants from revolting, and prevented the incursions of the Scots, but greatly improved the country; for in times of peace they introduced the arts and manners; and in times of war they raised monuments of their victories, and erected altars to their gods; so that there are more Roman antiquities in this county than in any other.

When Cumberland was subdued by the Saxons, upon the declension of the Roman power in Britain, it became a part of the kingdom of Northumberland, and was then, by its new lords, first called Lumbra-land, or Lumer-land, the land or country of the Cumbri.

From the time when the power of the Saxons was broken by the Danes, till the year nine hundred and forty six, this county had petty kings of its own chusing; but about that time, Edmund, brother to king Ethelstan, having, with the help of Leontine, king of South Wales, conquered the county, granted it to Malcolm, king of Scotland, upon condition that he should defend the northern parts of England against all invaders; and by virtue of this grant, the eldest sons of the kings of Scotland were stiled governors of Cumberland. The Saxons some time afterwards reduced it again under their government; but at the time of the Norman conquest it was so impoverished, that William the Conqueror remitted all its taxations, and for that reason it is not rated in the Doomsday book as other counties are.

R I V E R S.

Cumberland abounds with rivers and large bodies of water, which the inhabitants call meres. Of the rivers the Derwent is the chief. It rises in Borrudale, a large

valley south of Kefwick, and running along the hills called Derwent-Fells, forms a large lake, in which are three small islands, and at the north end of which stands the town of Kefwick; thence the Derwent runs through the middle of the county, and passing by Cockermouth, another market town, falls into the Irish sea near a small market town called Workington.

The Eden, another considerable river in this county, rises at Mervel-hill, near Askrig, a market town in Yorkshire, and running north-west across the counties of Westmoreland and Cumberland, upwards of thirty miles, and being joined by several other rivers, turns directly west; and passing by the city of Carlisle, falls into that part of the Irish sea, called the Solway Frith.

Besides the two rivers above-mentioned, here are also the Eln, the Esk, the Leven, the Irthing, the South Tyne, and several other less considerable rivers and brooks, which supply the inhabitants with plenty of fish.

REMARKS on the INLAND NAVIGATION of Cumberland.

Though there are several rivers in this county capable of being made navigable, the advantage has been neglected. Indeed there are not many places of note in this county, except those situated at or near the mouths of the rivers; so that the principal productions of the country, which are coals and metals, are very easily exported, as the mouths of all the rivers are navigable, without any assistance from art. The river Derwent, which runs by Cockermouth, might be easily made navigable to Kefwick-lake, and prove very advantageous to the inhabitants, as there are several mines on the borders of the lake, particularly those of wadd, or black-lead. Indeed the whole county is so intersected with ridges of lofty mountains, that an inland navigation would be very expensive, and in many places perhaps impossible. The Derwent is already navigable for vessels of considerable burden to Cockermouth, which is twelve miles from the sea. The river Eden is also navigable to a considerable distance above Carlisle, and might be so much farther at a small expence. We shall consider the navigation of the mouths of these and other rivers in our remarks on the sea-coast of Cumberland.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of this county, though cold, is less piercing than might be expected from its situation, being sheltered by lofty mountains on the north. The soil is in general fruitful, the plains producing corn in great abundance, and the mountains yielding pasture for numerous flocks of sheep, with which they are perpetually covered. The face of the country is delightfully varied by lofty hills, vallies, and water; but the prospect would be still more agreeable if it was not deficient in wood, many plantations of which have been made, but without sufficient success to encourage the practice.

The Derwent produces salmon in great plenty, and the Eden char, a small fish of the trout kind, which is not found in any waters of this island, except the Eden and Winendermere, a lake in Westmoreland. At the mouth of the river Irt, on the sea-coast, near Ravenglas, a market-town in this county, are found pearl muscles; for the fishing of which some persons not long since obtained a patent; but it does not appear that this undertaking has yet produced any considerable advantage.

Several mountains here contain metals and minerals; and in the south part of the county, which is called Copeland, the mountains abound with rich veins of copper, as they do also in Derwent-Fells, particularly at Newland, a village near Keswick, where it is said there was once found a mixture of gold and silver. In this county there are likewise mines of coal, lead, lapis-calaminaris, and black lead, a mineral found no where else, called by the inhabitants wadd. The wadd mines lie chiefly in and about Derwent Fells, where this mineral may be dug up in any quantity.

REMARKS on the HUSBANDRY of Cumberland.

In the road from Glenwelt to Brampton are some moors of an excellent sandy loam, though intirely uncultivated. The inclosed lands are good, and let from ten to twenty-five shillings per acre. The farms are small, hardly any above one hundred pounds a year.

Three miles to the south of Carlisle, land lets at about fifteen shilling an acre at an average. Farms from twenty to two hundred pounds a year. In as many more, they are not so large, from thirty to one hundred and twenty pounds, and rents from two to twenty shillings an acre.

About High Ascot the soil varies from a light loam and gravel to a clay, lets from ten to twenty shillings an acre.

Farms from ten to one hundred pounds a year.

Their courses are,

1. Fallow,
2. Wheat,
3. Oats,
4. Pease,

And

1. Turneps,
2. Barley,
3. Clover for three years.

For wheat they plough three or four times, sow three bushels and reap about twenty. For barley they plough twice, sow three bushels, and reckon the average produce the same as of wheat. They stir but once for oats, sow seven bushels and an half, and gain fifty in return. For pease they likewise plough but once, sow three bushels, and gain at a medium fifteen. They stir twice or thrice for rye, sow three bushels, generally in February or March, and reap twenty. They cultivate some few turneps; plough three or four times for them; a few farmers hoe them. The medium value they reckon at fifty shillings an acre; and use them for cattle and sheep. Clover they sow with barley or oats, generally mow it for hay, and get about a ton at a mowing.

For potatoes they plough thrice, give the land a good coat of dung; chuse the driest soils for them; and lay the slices in every other furrow, one foot from plant to plant. On coming up they plough between the rows, to destroy the weeds; a practice one would suppose sufficient to introduce a good turnep culture universally; for those who see the effects of this operation on potatoes might surely extend the idea to turneps.—They get three hundred bushels per acre, and sow rye after them.

Good grafs lets at twenty shillings an acre; they apply it chiefly to dairying, and reckon that an acre and half will feed a cow through the summer; and an acre carry four sheep. Very few of them manure their grafs. Their breed of cattle is the long horned, which they account much the best. Their beasts they fatten to about forty stone.

The product of a cow they reckon at fifty shillings, or three pounds; that a middling one will give from two to four gallons of milk a day, and make from four to seven pounds of butter a week. They have no notion of keeping hogs in consequence of cows; a dairy of twenty not maintaining above one or two. The winter food of their cows is straw or hay, a ton and half of which is the quantity they commonly suppose a cow to eat in the winter; but if clover hay is used, one ton is enough. The summer joist is twenty-five shillings, and

that of winter thirty and thirty-five shillings. They reckon ten cows the business of a dairy maid.

Their flocks of sheep rise from twenty to one hundred and twenty, and the profit they reckon at six shillings a head; lamb five shillings, and wool one. They keep them the year round on the commons. The average weight of fleeces four pounds.

In the management of their arable lands they reckon six horses necessary for one hundred acres of arable; they use two in a plough, and do an acre a day. The annual expence of keeping horses they reckon at five pounds ten shillings, or six pounds. The joist in summer forty shillings, in winter fifty. They break up their stubbles for a fallow in February; plough six inches deep. The price of ploughing, five shillings an acre; and of a cart, horse, and driver, two or three shillings a day. They know nothing of cutting straw for chaff.

Three hundred pounds they reckon necessary for a man to stock a farm of 100 l. a year.

Tythes are generally gathered. Poor rates six-pence in the pound; the employment of the women and children, spinning and knitting.

Price of L A B O U R.

In harvest, 4 s. a week, and board.

In hay time, 1 s. a day, and board.

In winter, 8 d. and ditto.

Mowing grafs, 2 s. an acre.

Ditching, 3 1/2 d. to 8 d. a rood.

Head man's wages, 10 l. to 12 l.

Next ditto, 7 l. to 7 l. 7 s.

Boy of ten or twelve years, 25 s.

Dairy maids, 2 l. 10 s. to 3 l.

Other ditto, 2 l. 5 s. to 2 l. 10 s.

Women in harvest, 4 s. a week, and board.

In hay time, 8 d. and board a day.

About Penrith there are variations, which deserve noting. The soil is of divers sorts, clay, sand, gravel, loam, and black moory earth. The medium rent of that inclosed is fifteen shillings; the uninclosed, two shillings and six-pence, and three shillings and six-pence.

Farms rise from ten pounds a year, so high as seven hundred; but in general from eighty pounds to one hundred and fifty. Their courses are,

1. Turneps,
2. Barley,
3. Clover,
4. Wheat,
5. Oats,

Another,

1. Oats on the grafs broke up,
2. Barley,
3. Oats,
4. Oats,
5. Pease,
6. Barley.

In a common way they generally plough for wheat from three to six times, sow two bushels about Michaelmas, and gain, upon an average, about three quarters. For barley they plough from once to thrice, sow two bushels and a half in April or May, and gain about twenty-five. Sometimes barley is sown on new broke-up land, and the produce fifty bushels. They give but one stirring for oats, sow four bushels before barley sowing, and get twenty-eight in return. For pease they give but one earth, sow two bushels, and get in return about sixteen; generally use the grey rouncivals. They give from three to five ploughings for rye, sow two bushels, the crop about twenty-four.

For turneps they give three or four earths, never hoe, and reckon the average value per acre at 50 s. use them for sheep, and fattening of beasts. Clover they sow with either barley or oats, generally mow it once, (three times have been known,) and get two ton of hay per mowing.

They prepare for potatoes by ploughing twice or thrice; dung the land with long horse dung; lay the fetts in every other furrow, ten inches asunder, and hand-hoe

hand-hoe between them if weedy; sometimes they horse-hoe them. If the land is designed for wheat, they lime it about Midsummer, while the potatoes are growing. The crops rise to two hundred bushels per acre, but the average is about one hundred and twenty; price about two shillings a bushel.

Lime is their principal manure, though but of a few years standing. They lay ninety bushels per acre on their arable lands; costs them from three halfpence to three-pence per bushel, besides lading; they lay it on every fallow. They likewise use it on their meadows, and find it to answer well. But dung they reckon much better for every thing. They pare and burn a little, at the expence of twenty-four shillings an acre. No folding sheep, nor chopping stubbles. Stack their hay in buildings.

Good grass lets from fifteen to twenty shillings an acre. They use it both for dairying and fattening beasts; reckon that an acre will summer feed a cow, or feed five sheep. Their breed of cattle the long horned, which they think much the best; their oxen they fatten to about forty stone.

The product of a cow they calculate at four pounds ten shillings, and generally have two firkins of butter from each. The medium quantity *per week* about seven pounds weight, but sometimes fourteen *per cow*. They keep but few swine in proportion to their dairies, not above two to ten cows. The winter food is straw and hay; of the latter about a ton a head. They reckon a dairy maid can manage ten cows. Twenty-five or thirty shillings the summer joist. In winter they keep them all in the house.

They reckon three pounds the profit on summer fattening a beast of fifty stone. Swine fatten from fifty shillings to four pounds four shillings a head.

Their flocks of sheep vary greatly; from forty to three thousand. The profit they reckon five shillings each; that is, lamb four shillings, and wool one shilling. They feed them both winter and spring on the commons. The average of the fleeces three pounds weight.

They reckon six horses necessary for the management of one hundred acres of arable land; use two or four in a plough, as the soil is, and do three acres in two days. They account the expence of keeping a horse at six pounds a year. The summer joist two pounds two shillings.

They do not begin to fallow till after the barley sowing. The price *per acre* of ploughing is five shillings, and five and six-pence, and the common depth four inches.

They know nothing of cutting straw for chaff. The hire of a one horse cart is two shillings and six-pence a day.

Three hundred pounds they assert is a sum sufficient for stocking a farm of one hundred pounds a year.

Land sells in general at about thirty years purchase.

Price of L A B O U R.

In harvest, 1s. 6d. and beer.
 In hay-time, 1s. 3d. and ditto:
 In winter, 10d. and ditto.
 Reaping corn, 3s. to 5s.
 Mowing grass, 1s. to 2s. 6d.
 Ditching, 8d. a rood.
 Threshing wheat, 2d. to 2½d.
 ——— barley, 1½d.
 ——— oats, 1½d.
 Head man's wages, 12l. to 14l.
 Next ditto, 9l.
 Boy of ten or twelve years, 3l.
 Dairy maid, to 6l.
 Other maids, 3l. to 4l.
 Women *per day*, in harvest, 10d. and beer.
 In hay-time, 8d. and ditto.
 In winter, 6d. and ditto.

The soil about Kewick is both a hazel mould, sand, gravel, and moory; the first but shallow. The inclosed

lets from twenty shillings to thirty; a right of commonage included.

Farms, from ten to eighty pounds a year;

Their course,

1. Oats on turf,
2. Fallow,
3. Barley,
4. Wheat,
5. Oats, and grasses;

They plough twice for wheat, sow two bushels and an half, about Michaelmas, and reap thirty-five to forty, upon an average. They also stir twice for barley, sow six bushels in April or May, and reap forty in return. For oats they stir but once, sow seven bushels, and gain fifty. They have no beans, very few pease, and as little rye. They stir three times for turneps, hoe them once or twice; the average value about fifty-five shillings; use them for feeding sheep and stall-fattening oxen. They know but little of clover; one or two farmers have tried it with barley, but found it good for nothing. It must have been upon strange land.

They have two ways of cultivating potatoes, by ploughing and digging. In the first, they stir three times, and dung the land well, lay the slices in every other furrow, one foot asunder, and plough between them once while growing, besides hand-weeding. They plough them up, and get two, three, and four hundred bushels per acre.

Their other method is to lay the dung on the green sward, the slices on that, then they dig trenches, and with the earth cover the setts, but they reckon ploughing a better way.

Good grass land lets at thirty shillings an acre; use it mostly for dairying; an acre and half they reckon sufficient for a cow, and an acre for four sheep. Manuring it is common. Their breed of cattle is the long horned, and they reckon them best. Fatten their oxen to fifty stone; their swine to twenty-four, or thirty.

The product of a cow they reckon at three pounds, thirteen shillings and six-pence, and six gallons *per day* a common quantity of milk *per cow*. Do not keep above one hog to ten. The winter food, straw and hay; of the latter they eat about two ton. The summer joist is thirty-five shillings. In winter they are kept in the house. Their calves suck about two months.

Their flocks rise from one hundred to one thousand; the profit they reckon at four shillings and three-pence a head; that is, lamb three shillings, and wool one shilling and three-pence, sometimes five shillings. They keep them, in both winter and spring, on the commons. The average weight of the fleeces, four pounds.

In their tillage, they reckon that twelve horses are necessary for the management of one hundred acres of arable land. They use sometimes four, and sometimes two in a plough, and do an acre a day with them. The annual expence of keeping a horse they reckon at six pounds, ten shillings; the summer joist two pounds, two shillings.

The price of ploughing, *per acre*, is from five shillings to six; and March the time of breaking up for a fallow. The hire of a cart and horse, three shillings a day.

In the hiring and stocking of farms, they reckon three hundred and sixty, or four hundred pounds, necessary for one of eighty pounds a year.

Land sells at from thirty-five to forty years purchase.

Price of L A B O U R.

In harvest, 1s. and beer.
 In hay time, ditto.
 In winter, 6d. and board.
 Reaping wheat, 6s.
 Mowing grass, 2s.
 Ditching, 4d. to 5d. *per rood*.
 First man's wages, 10l. to 11l.
 Next ditto, 6l.
 Boy of ten or twelve years, 3l. to 3l. 10s.
 Dairy maid, 4l. 14s. 6d.
 Other ditto, 3l. 3s.

Women *per* day in harvest, 1 s. and beer.

In hay time, ditto.

In winter, 6 d. and beer.

The soil about Shapp is generally a loam upon a limestone, in some places thin, but in others deep; lets from one shilling to twenty an acre; but the inclosures generally twenty.

Farms from forty pounds to four hundred a year.

Their course,

1. Break up, and sow oats,
2. Oats,
3. Barley,
4. Oats, and then down again.

This is execrable.

They plough but once for barley, sow two bushels, and gain about twenty. For oats they give three or four ploughings, sow seven bushels and a half, and gain thirty-five in return.

Good grafs lets at twenty and twenty-five shillings an acre; it is used both for dairying and fattening, but chiefly the latter. An acre they reckon will keep a cow through the summer, or six sheep. They manure it as much as they can, but that is no great matter. Their breed of cattle is the long-horned, and have fattened them so high as one hundred and thirty stone, but very uncommon; sixty to eighty common.

The product of a cow they reckon at five pounds, and four gallons the common quantity of milk *per* day. As to swine, they keep none, upon account of cows. A farmer without a dairy has as many as those who keep the largest, which would surprize a Suffolk or an Essex man. The winter food of the cows is hay, in general, but some straw. Their calves for the butcher suck from one to ten weeks; for rearing, not at all, but are all brought up by hand with milk, for twenty weeks. A cow, in winter, generally eats an acre and an half of hay, and they are kept in the house. The summer joist from fourteen shillings to forty.

Their flocks of sheep rise from five to one thousand five hundred. They sell no lambs, but rear them for weathers, at from seven shillings to fourteen. The profit, *per* head, of the flock, about five shillings. Keep them, both winter and spring, on the commons. The weight of the fleeces three or four pounds, at three-pence.

They use two or three horses in a plough, and do an acre a day. The summer joist of a horse varies from ten shillings to fifty. The price of ploughing, from five shillings to six an acre. They cut about five inches deep.

They know nothing of cutting straw for chaff.

They reckon five or six hundred pounds necessary to stock a farm of one hundred pounds a year: they are, in general grazing ones.

Land sells from thirty to thirty-five years purchase. There are many freeholds of from one hundred to three hundred pounds a year.

Price of L A B O U R.

In harvest, 8 d. to 10 d. and board.

In hay time, 1 s. to 1 s. 6 d. and ditto.

In winter, 6 d. and ditto.

Mowing 3 s.

Head man's wages, 9 l.

Next ditto, 7 l. 10 s.

Boy of ten or twelve years, 50 s.

Maids, 4 l. to 5 l.

Women *per* day in harvest, 6 d. and board.

In hay time, ditto.

CITY and MARKET TOWNS, &c.

The city is Carlisle, and the market-towns are Cockermouth, Abbey Holm, Astonmore, Rooth, Brampton, Egremont, Ireby, Keswick, Kirk-Oswald, Langton, Penrith, Ravenglas, Whitehaven, and Wigton.

We entered this county from Thirlwall-castle, and stopped at Brampton, a town of considerable size, situated on the river Irthing, two hundred and eighty-seven miles

from London. It is seated on the new military road made in the reign of his late majesty king George II. from Newcastle to Carlisle. The earl of Carlisle, who is lord of the manor, keeps a court-leet every year; and in the town is an hospital for six poor men, and as many women, built and endowed by a countess of Carlisle, with an allowance for a chaplain. This place, according to Camden's opinion, is the Bremetenracum of the Romans.

This town has a weekly market on Tuesdays, and two annual fairs, viz. the second Wednesday after Whitsunday, and the last Wednesday in August.

Near Brampton, on the top of a hill, is a place called the Mote, where there are still the remains of trenches to be seen, as also in another place near the town.

Not far from Brampton the river Gelt falls into the Irthing; and about half a mile above the Gelt bridge, on the side of the river next to Brampton, is a rock still called the Old Quarry. From this place the Romans are supposed to have procured almost all the stone which they used in that part of the wall that crossed Cumberland. Here on the face of a rock, about half way up a steep hill that hangs over the Gelt, is an ancient inscription, which Mr. Horsley is of opinion should be read as follows. Vexillatio Legionis secundae Augustae ob virtutem appellatae sub Agricola optione . . . Apro et maximo consulibus ex Officina Mercatii . . . Mercatii filius Firmii. An Optio was a sort of deputy to a centurion, or other officer who acted for him in his absence, and in this station the Agricola above-mentioned probably was. The consuls above-named refer us to the year two hundred and seven, being in all probability the first year after the arrival of the emperor Severus in Britain, when we may reasonably suppose, some of his soldiers were here employed in procuring stone for building his wall.

About three miles west of Brampton, the river Gelt having passed by Naworth, falls into the Irthing, which runs with a violent and rapid stream by Naworth-castle, long the seat of the Dacres, barons of Gillislan, the first of whom, named Ranolph of Dacre, obtained a license in the reign of Edward III. to make a castle of his house. It afterwards fell to lord William Howard, the third son of Thomas, the second duke of Norfolk, and is now in possession of the present earl of Carlisle. This castle, which is three miles west of Brampton, is a large structure with a tower at each end; and is so entire, that it seems never to have been damaged, or at least is extremely well repaired. Here is a library, which was formerly well furnished with books; and has now many valuable manuscripts relating to heraldry and English history. In the hall are the pictures of all the kings of England from the Saxon times; which were brought from Kirk-Oswald castle, when that was demolished about two hundred and fifty years ago. In the garden-wall are a great many stones, collected and placed there by some of this family, with Roman inscriptions; of which a few only are legible: on one is the following:

IVL, AVG. DVO—M. SILV—VM.

On another;

I. O. M.—II. ÆL. DAC.—C. P.—EST—RE
LIVS FA. L. S. TRIB. PET. VO. COS.

And on a third;

COH. I. ÆL. DAC. CORD.—ALEC. PER.—

There are several others, which have been brought from Williford, a village upon the Pict's wall, where Mr. Camden saw them.

At the distance of three miles north-east of Brampton is LANCROFT priory, which consisted of canons regular of the order of St. Augustine, and was founded in the year 1169, by Robert de Vallibus, son of Hubert de Vallibus, first baron of Gillisland, and justice itinerant into Cumberland, in the reign of Henry II. He founded it, as is said, on account of his or his father's killing one Giles Bueth, who had, or pretended to have, a right to the barony of Gillisland. It was a magnificent structure, as appears by its present remains; for a great part of the walls are still standing. It was valued, at the dissolution of religious houses, at about seventy-seven pounds, seven shillings and eleven-pence a year. Below

this

this priory, where the Picts or Roman wall passed the river Irthing, by an arched bridge, is a place now called Wineford, which some would have to be a Roman station; but others, who are more to be relied upon, think otherwise.

Whitley-castle was a Roman station, and several stones with inscriptions have been found, particularly one, by which we learn, that the third cohort of the Nervii built a temple here to the emperor Antoninus, the son of Severus.

From hence we proceeded to Carlisle, a city very commodiously and pleasantly situated, three hundred and one miles from London, near the conflux of three rivers, two of which are very considerable; the Eden on the north, over which there is a bridge; the Peterell on the east, and the Cauda, a smaller stream on the west. It is an episcopal see, and likewise a sea-port; and, if credit may be given to the British Chronicle, was first built by Leil, a king of the Britons (at the time when Solomon began to build his temple) and so called from him in that language, *Caer-leil*. But be that as it may, it was a place of note among the Romans, when they resided in this island, which is evident, as well from many antiquities dug up here, as from the frequent mention of it by their writers under the name of *Luguvallum*, concerning the etymology of which word there have been various opinions, but none so probable, as that which will have it derived from *Lugus*, (signifying, in the Celtic and British tongues, a tower or fort) and *Vallum*; that is, a fort by the *Vallum* of Adrian.

That this city flourished in the time of the Romans is evident from many antiquities which have been dug up near it, and from the frequent mention of it in Roman authors. It is recorded by William of Malmesbury, that in the reign of king William II. a Roman triclinium, or dining-room was discovered in this place, built of stone, and arched over in such a manner that it could not be destroyed even by fire. On the front of it was this inscription:

MARII VICTORIÆ.

Or as Camden believes,

MARTI VICTORI.

A large altar was dug here not long since, with this inscription in very fair characters:

DEO MARTIS DELATVCADRO.

which shews it to have been dedicated to Belus, or some other local deity, worshipped by the Roman legions that were quartered there. That the sixth legion was quartered in this place appears from the following inscription in beautiful characters, and supposed to be cut upon stone, though that does not appear:

LEG. VI. VIC. P. F. G. P. R. F.

This is interpreted, *Legio Sexta Victrix, Pia, Felix*. The other letters are not explained.

After the departure of the Romans it was destroyed by the Scots and Picts, and lay buried in its ruins many years after the coming of the Saxons, by whom it was called *Luel*, till Egfrid, king of Northumberland, about the year 686, rebuilt it, and environed it with a good stone wall, and having repaired the church, and placed in it a college of secular priests, gave it, with all the lands fifteen miles round, to St. Cuthbert, bishop of Lindisfern, and his successors. In the ninth century, when the whole country was ruined by the repeated invasions of the Danes and Norwegians, this city was again demolished, and so remained about two hundred years, till king William Rufus returning from the Scotch wars, and being much pleased with its situation, rebuilt the houses, the walls and the castle, placing here a colony of Flemings, and afterwards (when he removed them into Wales) of southern Englishmen. King Henry I. considering how good a barrier it might be against the Scots, fortified it still better, and dignified it in the year 1133 with an episcopal see, confirming at the same time the monastery of canons regular of St. Augustine, founded just before by Walter, one of his chaplains, which continued till the thirty-third of Hen. VIII. when it was dissolved, and the prior and convent converted into a dean and chapter, consisting of four canons and prebendaries. This city was taken by the Scots in

the reigns of king Stephen and king John, but recovered by the kings Henry II. and III. and being in the reign of king Edward II. casually burnt, was by the munificence of future princes restored out of its ashes, and much improved in strength and beauty; so that in the late civil wars, it was able to stand a siege of nine months, and was the last garrison that surrendered to the rebels; whatever the defence it is now capable of making may be, it is still kept as a garrison in good military order.

King Edward I. held a parliament here in the thirty-fifth year of his reign, and the civil government of the city was committed to the citizens by king Henry II. with several privileges which have, by divers succeeding kings in so many charters, been confirmed and augmented to the corporation, which consists of a mayor, twelve aldermen, two sheriffs or bailiffs, twenty-four capital citizens or common council-men, and a recorder. When it became a borough is uncertain, but undoubtedly before the fifth of Richard I. when its burgeses paid ten marks for their liberties, as they did the like sum in the reign of Henry III. for having a coroner of their own. The fishery of the Eden, a large common of pasture, with an extensive manor, are vested in the corporation.

Carlisle-castle, if not founded by the Romans, is very probably as ancient as the year 686, when king Egfrid rebuilt the city: but it is as probable, that it was again destroyed, with the greatest part of the city, by the Danes and Norwegians, and laid in ruins for two hundred years; for king William Rufus is said to have repaired the castle, as well as the walls and houses of this city, in his return from the Scotch wars. The annotator upon Camden says, it is certain the castle was built by king William Rufus, which might indeed properly enough be said, considering the ruinous state wherein it was before. Mr. Camden himself infers from the arms, that it was built by king Richard III; but it is more probable that he did (if any thing) only repair it, as might also queen Elizabeth, whose arms are put up in another part. It is now made use of as a mansion-house for the governor of the castle for the time being. The city is surrounded by a wall one mile in compass, on which three men may walk a-breast, and has three gates, namely, the *Caldo*, or Irish gate on the south; the *Bother*, or English gate on the west, and the *Rickard*, or Scotch gate on the north. The east part of the city is defended by a strong citadel, fortified with several orillons or roundels, built by Henry VII. It was taken by the rebels in 1745, and retaken soon after by his royal highness the duke of Cumberland. Carlisle is at present a wealthy and populous place, with well built houses. There are but two parish churches in this city besides the cathedral; namely, St. Mary's and St. Cuthbert's. The cathedral stands almost in the middle of the city, is enclosed by a wall, and the choir or east part of it is a curious piece of workmanship. This part is one hundred and thirty-seven feet long, and seventy-one broad, having a noble window forty-eight feet high, and thirty broad, adorned with curious pillars of excellent workmanship. The roof is elegantly vaulted with wood, and adorned with a variety of arms; namely, those of England and France quartered, those of the Percies, the Lucies, the Warrens, Mowbrays, and others. The west end, which is the lowest, was also formerly very spacious, but great part of it was destroyed in the civil wars, and the materials carried off by the Parliamentarians. The tower is one hundred and twenty-three feet high. There belong to this cathedral a bishop, a dean, a chancellor, an archdeacon, four prebendaries, eight minor canons, four lay clerks, six choristers, and six almsmen. The bishoprick is valued in the king's books at five hundred and thirty-one pounds, four shillings and nine-pence a year. The situation of St. Mary's church is very singular, it being in the body of the cathedral.

Carlisle has given the title of earl to several noble families, as it now does to a younger branch of the Howards. Large quantities of fustians were formerly manufactured here, but this trade is decreased.

This city sends two members to parliament, has a weekly market on Saturdays, which is very considerable for corn, wool, &c. and three annual fairs, viz. August the twenty-sixth, for horned cattle and linen, September ninety, for horses and horned cattle; and the first and second Saturdays after October the tenth, for Scotch horned cattle.

Linstock is very near Carlisle, and is a castle belonging to the bishops of that see, which Waldeve, son of earl Gospatrick, and lord of Allerdale, gave to the church of Carlisle.

Nor far from hence is Blencow, a manor belonging to an ancient family of that name, where there is a very good grammar school, founded by Mr. Thomas Bourbank, a native of Blencow, in the reign of queen Elizabeth.

Rose-castle (so called from the sweetness of its situation) the seat of the bishops of Carlisle, was built at different times by the successive bishops of that see, particularly Strickland, Kite and Bell, whose names the towers now standing still retain. King Edward I. in the twenty-eighth year of his reign, in his expedition against the Scots, lodged here, and dated his writs for summoning a parliament to be held at Lincoln. It was fortified with strong walls, and a double ditch, which were kept in good order, till the civil wars, when it was burnt down in 1652: what escaped the fire, and was standing at the restoration, was somewhat repaired and made habitable by Dr. Stern, then bishop of this see: but its greatest benefactors were his two next successors, Dr. Rainbow, and Dr. Smith, who, at no small expence, added a chapel and two towers; and this, with the later improvements, have rendered it a decent and commodious palace.

Near Rose-castle, is Hutton-hall, anciently in the possession of a family of that name, but was purchased by the Fletcher's, who made it as pleasant a seat as most in the county.

About six miles to the east of Carlisle is Corby-castle, which was the residence of the ancient family of the Salkelds, and opposite thereto, on the river Eden, stands,

The village of Wetherall, five miles east of Carlisle, where formerly was a small monastery or cell, which, at the dissolution of the religious houses, was given by Henry VIII. to the dean and chapter of Carlisle. It belonged to the benedictine Monks, and was founded in the reign of William Rufus, by Ranolph de Meschines, earl of Cumberland. He dedicated it to St. Constantine, and gave it for a cell to the abbey of St. Mary, at York. David, king of Scotland, and prince Henry, his son, with several others, were also benefactors to it. It was valued at the dissolution, at one hundred and seventeen pounds, eleven shillings and ten-pence a year, by Dugdale; but at one hundred and twenty-eight pounds, five shillings and three-pence, by Speed. There remains a square structure, which on one side seems to be entire, and was probably a gate-house to the priory; or, at least, there is a large gateway, that passes quite through it to the river-side. Near this place are still to be seen a sort of houses, dug out of the rock, which were probably designed for a retreat in troublesome times. They are of very difficult access, and consist of two rooms, one within another, of about five or six yards square each. However, some take them to be intended for hermits to lodge in, on account of their being so near the priory.

About a mile to the north of Carlisle is Stanwick, or Stanewegg, which signifies a place on a stony way, and is a town of some antiquity; for Henry I. gave the appropriation of it to the church of Carlisle, when it was made a bishop's see. To the north-west of this place near the sea-shore, and at the mouth of the river Eden, is Rowcliff, where there is a castle built, not many ages ago, by the lords Dacre, for their own private defence. Above this place there are two rivers, the Esk, and the Leven, which, uniting their streams, fall into Solway Frith. The Esk rises in Scotland, but has its course for some miles in England, where it receives the

river Kirkfop. Upon the banks of this river is seated Netherby, now a little village consisting of a few cottages; but the extraordinary ruins that are near it, plainly shew that it was formerly a considerable place, and perhaps a Roman fort. It is judged to have been the old Esica, where the tribune of the first cohort of the Astures kept garrison against the Barbarians; but Horsley is positive that it was one of the *Castra Exploratorum*. However that be, in the walls of the mansion-house here is the following inscription, in memory of the emperor Adrian, set up by the second legion, called *Augusta*:

IMP. CÆS. TRA. HADRIANO AVG. LEG II. AVG. F.

Several other inscribed stones have been discovered here since Mr. Camden's time, and a gold coin of Nero. One of the stones is inscribed

IMP. COMM. COS. Which may be read; Imperatori Commodo Consuli. This seems to have been erected about the year 155, when Commodus was saluted by the title of Emperor Britannicus. On another is this:

DEO MARTI BELATUCADRO RO. VR. RP. CAII ORVSII. M.

By which it appears that Belatucadras was the same with Mars, who was worshipped in the eastern parts of the world, under the names of Bel, Baal, and Belinus.

Beyond the Esk, and on English ground, there is a place called Sollom Moss, remarkable for the success of the English, in taking many Scotch noblemen prisoners in the year 1542. The English, commanded by Sir Thomas Warton, being posted upon higher ground, took the advantage, and falling upon the Scotch army put them to flight. James V. of Scotland was so grieved for the loss of his army, which consisted of one thousand five hundred men, that he soon after died.

About two miles to the east of the road that leads from Carlisle to Stanwick, is Scaleby, still surrounded with a moat and in very good order. It was built by Richard the Rider, surnamed Tiliolff, who first possessed the manor of Scaleby, by the grant of king Henry I. From him it descended along with the said manor, for about ten generations, to Robert Tiliolff, who died in the reign of king Henry VI. without issue. Then it came by marriage of the heirs to the Pickeringings, and afterwards from them, by the like means, to the Musgraves of Hayton in this county, of whom, after it had suffered much in the civil wars, it was purchased by Richard Gilpin, Esq; M. D. grandfather of Richard Gilpin, Esq; the present proprietor.

Upon a small river called the Leven, near Saltom Moss, is a village named Bew-castle, or Bueth-castle, so called from one Bueth, a Cumberland man, who is said to have built it about the reign of William the Conqueror. In the time of Edward II. it was in the possession of Adam de Swinburn; but in Camden's, it was in the hands of queen Elizabeth, and was defended by a small garrison. The church is now almost in ruins, and in the church-yard is a cross about five yards high, washed over with a white oily cement to preserve it from the weather. It is a noble monument, and deserves the attention of the curious. The shape inclines to a square pyramid, being two feet broad at the bottom, and tapering up toward the top. On the west side, among other things, is the picture of a holy man, in a priest's habit, with a glory round his head; and the effigies of the Virgin Mary with a child in her arms, and both their heads are also encircled with glories. The north side is covered with chequer work and characters. The chequer work Mr. Camden supposes to have been the arms of the Vaulxes; but the characters were so effaced he could make nothing out of them. Dr. Nicholson is of opinion, that this inscription should be read RYEBURN, which in the Danish language signifies a cometary, or burying ground; and the chequer work is thought to countenance this conjecture as being an emblem of the tumuli, or burying-places of the ancients, and of much greater antiquity than the family of the Vaulxes, whose arms Mr. Camden supposed it to be. On the east side are representa-

presentations of birds, grapes, and other ornaments, with an inscription so much broken, that its purport is very doubtful.

At Burg upon the sands, a little distance from Carlisle, is the monument of our victorious prince, Edward I. who having so far subdued the Scots as to bring away the sacred stone at Scone-Abbey, whereon their kings used to be crowned, died here in his camp, on his march against them, like a true soldier, guarding his frontiers with his last breath. On the spot in his camp where he expired, which has always been distinguished by some great stones that were rudely heaped upon it, there is now erected a square pillar, nine yards and an half in height, with these inscriptions on three sides:

On the West side.

M-mo-ia aeternae Edwardi I. Regis Angliæ longe clarissimi, qui in belli apparatu contra Scotos occupatus, hic in castris obiit 7. Julii A. D. 1307.

To the immortal memory of Edward I. the far most illustrious king of England; who, being surpris'd in his preparations for war against the Scots, died here in the field, July 7, 1307.

On the South side.

Nobilissimus Princeps Henricus Howard, Dux Norfolkæ, Comes Marechal Angliæ, Comes Arund, &c. . . . ab Edwardo I. Rege Angliæ oriundus.

The most noble Prince Henry Howard, Duke of Norfolk, Earl Marshal of England, Earl of Arundel, &c. descended from Edward I. king of England.

On the North side.

Johannes Aglionby, T. C. F.

Beneath:

Tho. Langstone fecit, 1685.

Langtown, to which we passed from Carlisle, is seated on the northern extremity of the county, on the borders of Scotland, near the conflux of the rivers Esk and Kirkcopp, three hundred and sixteen miles from London. There is a charity-school here for sixty children, endowed by Mr. Reginald Grahme; and the late lord Preston had a fine seat near the town. Though this is a place of no great note, it has a weekly market on Thursdays, and two annual fairs; on the Thursday after Whitsunday, for horses and linen yarn; the Thursday after Martinmas, and the Thursday after November twenty-two, for horses, horned cattle and linen cloth.

From Langtown we proceeded to Wigton, situated in a forest called Allerdale, two hundred and eighty-eight miles from London. It is a place remarkable only for a market on Tuesdays, and an annual fair on the twenty-fifth of March, for merchandize and toys.

About a mile south of Wigton are the ruins of an ancient city, to which the inhabitants have given the name of Old Carlisle. Both Camden and Dr. Stukely conjectured, that the Romans had here their garrison, called by Antoninus, *Castra Exploratorum*; but Horsley, with greater probability, supposes it to be *Olenacum*, and observes, that the ruins of the old Roman town and station here are very grand and conspicuous; it stands upon a military way very large and visible, leading directly to Carlisle and the Roman wall. The ramparts of the station lie two of them directly east and west, and the others north and south. There seems to have been a double agger quite round it. The river Wiza runs on the south and west sides of the station about half a mile from it, and the descent to the river is steep; yet the out-buildings have been on all sides here as well as at Old Penrith. From this station there is a very large prospect, especially westward towards the sea. It appears by inscriptions, that a body of horse, called *Ala Augusta*, was long quartered here; and according to the *Notitia Olenacum*, was garrisoned by the *Ala Herculea*; now Mr. Horsley conjectures, that the *Ala Augusta*, in the year 242 under the emperor Gordian, assumed the name *Gordiana*; and that about forty years afterwards the same *Ala* took the name *Herculea*, from the emperor Maximianus Herculeus; if then this conjecture be admitted, it proves, past all manner of doubt, that the

place now called Old Carlisle is the *Olenacum* of the *Notitia*. From a survey made of this spot in the year 1755, by the late Mr. G. Smith, it appears, that the aggers, prætorium, ditches and roads belonging to this station, are still to be traced by their remains on the uncultivated common; and Mr. Smith thought, that the *Alæ Auxiliariæ* appeared, by many scattered remains, to have encamped a considerable way to the eastward. The same gentleman observes, that though Mr. Camden calls it a famous city, it is most probable he never saw it, there being no remains of building besides the fort, the wall of which is still to be seen, and some wretched huts, which seem to have been cobbled up by private soldiers, merely to shelter them from the weather; for the remains of them are of very bad stone, though there is a good quarry at a little distance, to which resort would certainly have been had, if any regular edifices had been raised for more durable purposes.

To illustrate what has been said, it will be necessary to give some account of the several pieces of antiquity, which have been at various times found at this station. The first of these was mentioned by Camden, who copied the inscription, which is to be read as follows:

Jovi Optimo Maximo.

Pro salute Imperatoris Marci Antonii Gordiani pii felicitis invicti Augusti et Sabinæ Furæ tranquillæ conjugis ejus totaque domu divina corum Ala Augusta Gordiana ob virtutem appellata posuit cui præest Aemilius Crispinus præfectus equitum natus in provincia Africa de Tusuro sub cura Nonnii Philippi legati Augustalis pro prætoris Attico et prætextato Consulibus.

This is a votive altar, erected by the *Ala Augusta* above-mentioned in the year 242. He observes, that the face of the altar was so much defaced, that little could be perceived in the original, but the shape and size of the letters, which last are rude and uneven, and the A without a transverse. It was found at Old Carlisle.

The next inscription was also on a votive altar found here, and erected by the same *Ala*. The inscription on it, says Horsley, should be thus read: *Jovi optimo maximo Ala Augusta ob virtutem appellata cui præest Tiberius Claudius Tiberii Filius Justinus præfectus Fusciano et Silano iterum Consulibus.*

The chasm in the above inscription is by Dr. Gale filled up with the word *ingenuus*, which may probably be the true reading.

This altar was found by Mr. Horsley in the garden-wall at Drumbugh-castle, to which place it was carried from Old Carlisle. Mr. Camden's reading of this inscription is different, but with Dr. Gale we prefer that above inserted.

The third inscription is also on a votive altar, in the end wall of a stable at the same castle. Camden asserts, it was dug up at Old Carlisle, being in his time at Ilkirk, whence it was removed to Drumbugh-castle. The inscription on it:

Jovi Optimo Maximo. Ala Augusta ob virtutem appellata cui præest Publius Aelius Publii filius Sergia Magnus de Murfa ex Panonii Inferiore Præfectus Aproniano et Bradua Consulibus.

Jovi optimo maximo Ala Augusta ob virtutem appellata cui præest Publius Aelius Publii filius Sergia [tribu] magnus de Murfa ex Pannonia inferiore præfectus Aproniano et Bradua Consulibus.

Thus we find this altar was erected by the same *Ala*, under the reign of Commodus in the year 191. There is nothing striking in the form of the altar, but in the inscription, the abbreviations or ligatures and complications of letters are remarkably numerous.

A third altar is inscribed to the local deity *Belatucadrus*, thus;

BELATUCADRO JULIUS CIVILIS OPTIO VOTVM SOLVIT; LIBENS MERITO.

Here is also a fourth altar, very fair, which is thus inscribed:

DIS DEABVSQVE PVBLIUS POSTHVMIVS ACILIANVS PRÆFECTVS COHORTIS PRIMÆ DELMATARVM.

Besides

Besides the altars, there is a stone curiously engraved, upon which are two winged Genii supporting a garland, and inscribed;

VICTORIÆ HVGG DD NN.

which is thus read; Victoriæ Augustorum dominorum nostrorum.

In the highway at Wigton are several altars which are said to have been brought from Elnborough and Old Carlisle. On the sides of them are representations of sacrificial vessels, as a pitcher, a melter, a mallet, and a platter, but the descriptions are so defaced as not to be legible.

Not far from hence was dug up a pillar of rough stone, which bore this inscription:

IMP CAES M. IVL. PHILIPPO PRO FEDICI AVG ET
M. IVL. PHILIPPO NOBILISSIMO CÆS. TI P. COS
- - - which should be read as follow.

Imperatori Caesari Marco Julio Philippo pio felici Augusto et Marco Julio Philippo nobilissime Caesari tribunitia potestate Consuli. Mr. Horsley takes this pillar to have been one of the military stones, erected at every mile's end upon the military ways, and to have been set up in the year 247, when Philip the father was consul the second time, and his son the first. The second stroke of the word IVL in the seventh line, he imagines, however it may have happened, to be plainly superfluous, though it is clear and distinct upon the stone. The altars, which were in Camden's time set up in the highway at Wigton, were all brought from Old Carlisle, but even then their inscriptions were effaced.

Mr. Horsley found at Drumbugh-castle several other altars without inscriptions which belonged to this station, and imagines, that some of the following inscriptions, recorded by Camden, might have been on them.

DEO
BANCTO BELA
TYCADO
AVRELIVS
DIATOVA ARA E
X VOTO POSUIT
LL. MM.

Mr. Horsley reads this, Deo sancto Belatucadro Aurelii Diatavo aram ex Voto posuit Libentissime. This inscription was, in Camden's time, at Wordal, the seat of Mr. Dykes; but the altar might have been removed to Drumbugh. Horsley thinks ara, in the fifth line, must be for aram, and that MM, in the last line, can be read no otherwise than above, and he rather chose to read LL libentissime, than libens libens, because, though these two words frequently occur apart at large in inscriptions, they never appear conjunctly.

The next inscription is also recorded in Camden.

DEO
CEAIIO AVR
M RTI. ETMS
ERVACIO PRO
SE ET SUIS. V. S.
LL. M.

Deo Ceaiio Aurelius Ecruracio pro se et suis votum solvit Libentissime Merito. The above is Mr. Horsley's reading of his inscription; but with Mr. Ward, of Gresham college, we think it should be read, Deo Oceano Aurelius Martius et Martia (or Marfia) Eruracio, &c. and that it was erected by Martius and his wife, to Oceanus, for their safe passage hither by sea.

We must take some notice of another inscription inserted in Camden, and found at this station, and the more particularly as the Ala Augusta is mentioned in it. The inscription is as follows.

D M
MABLI
NIVS SEC
VNDVS
EQUIS
ALE AVG
STE STIP

This inscription Mr. Horsley reads, Diis Manibus Mablinae secundus eques alae Augustae Stipendiorum.

The number of years Mablinae served is not mentioned; Mr. Horsley therefore supposes, that in the original it was defaced. There is little remarkable in the inscription, only Cquis for eques, and Ale and Auguste with a single e, but this last is frequent.

We must now mention some more recently discovered antiquities, noticed neither by Camden nor Horsley. In the summer of the year 1735, as some workmen were digging for the foundation of a ring wall, near the common at old Carlisle, and about 200 yards east of the ruins of the station, they found the remains of two Roman altars, and a stone trough.

The inscription on this altar, which is unfortunately much defaced, should probably be thus read. Jovi optimo maximo pro salute Lucii Septimii Severi et Marci Aurelii Antonini. There is something remarkable in the form of the letters of this inscription, particularly the A has no transverse stroke, and the A in salute, differs from those in Aurelii and Antonini. The workmanship of this altar is far from being contemptible, though at present much mutilated.

The other altar, as far as perfect, is legible enough. The reading of the inscription is probably, Cui praeest Aelius Septimianus Rusticus praefectus Taterno et Bradua Consulibus. If this altar was erected by the Ala Augusta, it had a different commander from what it had, when the altar we have already above-noticed was erected in the consulate of Apronianus and Bradua, though it is anterior to it in date only six years, it being erected in the year 185, when Triarius Maturus, and Metilius Bradua, were consuls. The letters on these altars are about three inches long, and the remains of them are about two feet high, and fifteen inches thick.

The trough, mentioned above to have been found with the altars, is twenty-two inches long, fourteen wide, and six deep, the rim being about four inches and a half.

In the summer of the following year, namely 1755, another altar was dug up within a few yards of the same spot. This is much more perfect.

The inscription on this altar should, we think, be read as follows; Jovi optimo maximo pro salute imperatoris Lucii Septimii Severi Augusti Nobilissimi eques Alae Augustae curante Egnatio verecundo praefecto posuerunt. Egnatius is a name which frequent occurs in Gruter, the perfect's name was therefore probably Egnatius Verecundus. There is nothing more remarkable in this altar, except its being erected by the Equites Alae Augustae, by which it should seem, that this Ala consisted both of horse and foot. Another altar has been found at this station, erected by one Mablinae Secundus, who was exques Alae Augustae. The altar, we are now treating of, is certainly posterior, in point of time, to those above-mentioned to have been erected in the two consulates of Metilius Bradua, when Commodus was emperor, as it gives the title of Emperor to Severus, yet as he alone is mentioned, without being associated with Albinus, or either of his own son, we may reasonably fix the date of it in the year 196, after Albinus was slain in Gaul, or in the following year 197; for in the year 198, Antoninus Caracalla was associated with his father in the empire, and, had the inscription been of so late a date, would probably have been mentioned with him. For the same reason the altar, of which a fragment was lately found at this station, as we have already observed, and where we meet with the names of both Severus and Antoninus, was probably erected soon after those emperors visited Britain, though, in the present mutilated state of the inscription, the exact year cannot be ascertained; perhaps it might be about 208.

Not far from Wigton is Elnborough, or Elenborough, that is, a borough upon the Eln, now a small village, situated near the mouth of the Eln. It was anciently called Volantium and was a Roman garrison, the station of the first cohort of the Dalmations. There was also a town near this place; then called Olenacum, where the first Herculean wing was garrisoned, in the reign of Theodosius the younger; and some have thought this the town that was afterwards called Elnborough. At

Elnborough

Elnborough however have been found many altars, statues, inscribed stones, and other remains of Roman antiquity. One of the altars is thus inscribed.

GENIO LOCI FORTUNÆ REDVC - - ROMÆ
ÆLEONÆ ET FATR BONO G. CORNELIVS PEREGRINVS
TRIB COHORT EX PROVINCIA MAVR. CÆS
DOMOS ET EDS DECVR - - - - This inscription is imperfect at the bottom, and is by Mr. Camden restored thus; DECVRIONUM ORDINEM RESTIVIT. On the back side of this altar, and upon the upper edge, are the words VOLANTII VIVAS; from which Mr. Camden conjectures, that the altar was votive for the life of G. Cornelius Peregrinus, who lived at Volantium and was erected by the inhabitants as an acknowledgment of his kindness and protection. Under this last inscription are the figures of several instruments used in sacrifices, as an ax and a chopping knife. On the left side are a mallet and a jug; and on the right, a goblet, a dish, and a pear.

Abbey Holm, Holm, or Holm Cultrum, is a small town, situated on a branch of Solway Frith, about five miles west of Wigton. It was formerly a place of note, on account of a considerable abbey, and said by Dugdale, to have been founded by Henry II. but Speed and others say, it was founded by Henry, earl of Carlisle and Huntingdon, son to David, king of Scotland, in the year 1150; which last opinion seems most probable, because the last-mentioned Henry endowed it with the lands of Holm-Cultrum. This abbey, which was of the Cistercian order, was dedicated to the Blessed Virgin. King Henry III. king Richard I. and king John, with divers nobles and gentlemen, were benefactors to it. John Gournon, and Margaret his wife, founded and endowed a chantry in this abbey church, for four chaplains, Monks of this house, and two secular chaplains. The church is now parochial. The impropiator is the university of Oxford, by the grant of queen Mary. Its annual value, at the dissolution, was four hundred and twenty-seven pounds, nineteen shillings and three-pence, according to Dugdale; or five hundred and thirty-five pounds, three shillings and seven-pence, according to Speed. Abbey Holm has a small market on Saturdays, and one annual fair on October 29, for horses and horned cattle.

Vulfey, or Wulfey-castle, is situated about five miles to the west of Abbey Holm, on the sea-coast, and is said to have been built by the abbots of Holm-Cultrum, for securing their books and charters against the incursions of the Scots. Camden tells us, that in his time, certain books of magic, said to have been written by Michael Scot, a Monk of this house, about the year 1290, and were preserved in this castle. This Michael was said to be a great mathematician, and in those days of ignorance, it was usual to attribute every thing to magic, that was not generally understood.

Below the monastery, the bay on which the town stands, receives the little river Waver, increased by the Wiza, at the head of which appear the ruins of an ancient station, or perhaps Roman town; but no certain information can be had what place it was. Calder-abbey was an abbey of Cistercians, founded in 1134, by Ranulph de Meschines, eleventh earl of Chester, and was endowed by him, and several other benefactors, with divers lands and possessions, all which were confirmed to the Abbot and Monks, by king Henry II. The annual value, at the dissolution, was fifty pounds, nine shillings and three-pence according to Dugdale; and sixty-four pounds, three shillings and nine pence according to Speed.

Bowness or Boulness is seated on Solway Frith, and was anciently a Roman station, but is now only a small village, in which the traces of old streets, and pieces of walls, plainly appear; Roman coins and inscriptions have been found; and some years ago a small brazen figure was dug up, which was thought to represent either a Mercury or a Victory. This small village was anciently the principal town of a large manor, containing several hamlets, and the mother church is still here. It has been observed, that the wall of Severus, commonly called the Picts wall, begins at this place, and

its foundations plainly appear in the sea at low water; for a good part of the shore seems to have been washed away; the roots of trees being visible when the tide is out. Here is the seat of Thomas Lawson, Esq; who has greatly improved the village, by paving the streets, and by new buildings. In that gentleman's ground several curious stones have been dug up.

Near this place the famous fortification, generally called the Picts wall, joins the Solway Frith. We have already given an account of this wall, and described great part of it in our Survey of Northumberland, and shall now proceed to that part of it which is situated in Cumberland.

The wall generally runs along the ridge of the higher grounds, the descent being towards the enemy on the north; and to preserve this advantage, it is frequently carried out and brought back in an angle. Adrian's wall, on the contrary, is continued nearly in a straight line, from station to station; and the paved military way, where the wall crosses along the edge of a precipice, or runs into angles, is extended in such a manner as to preserve the level as nearly as possible. It does not appear that there were any gates in this wall, or passage though it, except just in the stations, and where it is crossed by the great military ways from south to north.

The original dimensions of the walls, ditches, banks, and military ways, cannot now be certainly known, but Adrian's wall is thought to have been about eight feet broad, and twelve high, and the breadth of the military way near seventeen feet. Severus's ditch is every where wider and deeper than Adrian's, and the distance between the two walls, is sometimes scarcely a chain, and sometimes more than fifty.

Severus's wall is of free-stone, and where the foundation was not good, it is built on piles of oak, and the interstices between the two faces of this wall is filled with broad thin stones, placed not perpendicularly, but obliquely on their edges; the running mortar was then poured upon them, which, by its great strength, bound the whole together, and made it firm as a rock. But though these materials are sufficiently known, it is not so easy to guess where they were procured, for many parts of the wall are at a great distance from any quarry of free-stone; and though stone of another kind was within reach, yet it does not appear to have been any where used. It is difficult to conceive how the Romans could carry on such a work in the face of an enemy, except it be supposed, that it was not then the bounds of their conquest, but that they possessed a considerable part of the country farther north.

With respect to the present state of these walls it will be sufficient to say, that in some places that of Adrian cannot be traced, without difficulty, though in others it continues firm, and its height and breadth are considerable. In some parts of the wall of Severus, the original regular courses are remaining; in some the stones remain upon the spot, though not in a regular disposition; in others the rubbish is high and visible, though covered with earth and grass, but frequently the vestiges are extremely faint and obscure. We are obliged for these observations to the Vallum Romanum of John Warburton, Esq; who published a survey and plan of the ancient Roman wall and military way, and after the late rebellion was employed, among others, to superintend the work of making that way passable for troops and artillery.

From Stanwick, a little village north-west of Carlisle, where the wall crosses the Eden, its remains are easily traced, to its extremity at Bulness westward, on the Solway Frith. From the same place it is traced also eastward, for eight miles; but in almost every part of this space, the wall has been removed, and only the foundation can be discovered, with the trench before it on the north, and some of the little mile castles on the south. Eight miles east of Stanwick, it runs up a hill of considerable height, which is directly north of Naworth-castle, and proceeds through inclosed grounds for two miles, where the middle part of it, between the two faces, is still visible all the way; from hence it runs

through a large waste, to its crossing the river Irthing, where it enters Northumberland, and in our survey of that county we have already traced it from the above river to Newcastle upon Tyne.

We continued our journey south-westward, and arrived next at Ireby or Jerby, a small market town in the parish of Torpenho, two hundred and ninety miles from London. Camden, from the affinity of names, concluded that it was the Roman Arba; but Mr. Horsley, with greater probability, fixes this station at Moresby. Ireby is situated in a valley near the source of the river Eln, and is now divided into two manors, called Upper and Lower Ireby, or Market Ireby; the first is the most antient, but the last most considerable, having a weekly market on Thursdays, and two annual fairs, viz. February the twenty-fourth, and September the twenty-first, for horses and horned cattle.

From Ireby we proceeded to Cocker-mouth situated in a valley between the two rivers Derwent and Cocker, two hundred and eighty-eight miles from London. On each side of the town is a hill. On the west hill stands the castle, now mostly in ruins; the walls which are still standing, are about six hundred yards in compass, and on the gates are the arms of the Maltons, Humfravilles, Lucies, and Percies. On the other hill stands the church, which was anciently a chapel of ease to Bridgeham, a village about a mile distant; it is now parochial, and has two chapels of its own. It was first built by the Lucies, in the reign of Edward III. about the middle of the fourteenth century; and all but the tower was entirely rebuilt from the ground, by a national contribution raised by a brief in the year 1711. The tower is an ordinary structure, supported with buttresses being coped at the top with battlements, and slated.

The town is divided by the river Cocker into two parts, which are connected by means of two good stone bridges. It consists principally of two streets, the houses of which are for the most part built of stone, and slated on the top. In one street is the Moot hall, and corn market-house; in the former of which the town business is transacted; and in the other is the beast market.

Cocker-mouth, though not incorporated, is a borough, and governed by a bailiff, chosen annually by a jury of sixteen burghers at the court of the lord of the manor.

Here is a good trade, particularly for coarse woollen cloths, and the harbour is capable of receiving ships of considerable burthen.

Cocker-mouth sends two representatives to parliament, which are chosen by the inhabitants at large, and returned by the bailiff. It has only enjoyed this privilege since the year 1640, as it never made but one return before, which was in the twenty-third of Edward I. so that their right lay long dormant. Here is a weekly market held on Mondays, which is the best in the county for corn, if we except Penrith; and viz. two annual fairs, on the first Monday in May for horned cattle, and October ten, for horses and horned cattle.

On the side of the river Derwent, opposite to Cocker-mouth castle, at the distance of about two miles, are the ruins of an old castle, called Stap castle, supposed by Camden to have been built by the Romans. At this place, amongst other monuments of antiquity, was found a large open vessel of greenish stone, curiously engraved with little images, supposed to represent St. John the Baptist, and our Saviour baptized by him in the river Jordan, the descent of the holy Ghost in the shape of a dove being very plain. It was in all probability originally designed for a font, and to this use it is now applied in Bride Kirk church in this neighbourhood. There are, beside the figures above noticed, some characters in this font, which long puzzled the learned to interpret. This difficulty has, however, in a great measure, been removed in a letter written by the learned bishop Nicholson, to Sir William Dugdale. He supposes the vessel to have been originally designed for the use to which it is now applied: that it is Danish, and that the inscription, which is composed of a mixture of

characters, Runic and Saxon, as may naturally be expected upon the borders, should be read thus;

Er Ekard han men egroeten, and to dis men red wer
Taner men brogten. i. c.

Here Ekard was converted; and to this man's example were the Danes brought.

Leaving Cocker-mouth we proceeded next to Whitehaven, so called from a great rock of hard white stone, standing to the west of it, by the side of the harbour. It is a populous and rich town, two hundred and eighty-nine miles from London, and has been greatly improved and adorned by the Lowther family. It furnishes Ireland, and part of Scotland, with salt and coals, there being a prodigious coal-mine near it, which runs a considerable way under the sea, and except Newcastle, is the principal sea-port for the latter commodity, two hundred sail of ships, in time of war, or after contrary winds, having gone off at once for Dublin. The harbour and the road to it have been, of late years, much improved by several acts of parliament, and the inhabitants, some years since, built a new church at their own expence. As no navigable river falls into the sea in this place, the ships take in their coals in the road; but in spring tides run into the Haven with the flood, or stand away to St. Bees, where there is good anchorage and safe riding. Here is a custom-house, and several officers to receive the customs.

This town has a weekly market on Thursdays, and an annual fair, held August the first for merchandize and toys.

In the neighbourhood of Whitehaven, is the seat of Sir James Lowther, Bart. called Lowther-hall. The house is not so striking as the plantations, which are designed with much taste, and of very great extent. Near the road is the town of Lowther, where Sir James is building a town to consist of three hundred houses, for the use of such of his domesticks, and other people, as are married. And it is highly worthy of remark, that he not only encourages all to marry, but keeps them in his service after they have families. Every couple finds a residence here, and an annual allowance of coals. This is undoubtedly a most incomparable method of advancing population, and highly worthy of imitation. Above forty houses are already erected.

Two miles north of Whitehaven, is the village of Moresby, seated on the sea-coast, where is a harbour for ships. The shores hereabouts were all fortified by the Romans, as appears by the ruins; but mostly in those places where there was a conveniency for landing. Some are of opinion that this was a Roman fort; but this is uncertain; however, several remains of Roman antiquities, and stones with inscriptions have been found here. An altar was dug up not many years since, with a little horned image of Sylvanus, to whom it was dedicated. Not far from hence is Hay-castle, a piece of antiquity, which the inhabitants affirm formerly belonged to the noble family of the Moresbys.

From hence we proceeded to Egremont, situated on the banks of the little river Broad-water, over which it has two bridges, two hundred and ninety-seven miles from London. Before the time of king Edward I. it was a borough, and sent representatives to parliament, which privileges are now lost. The church here is a handsome edifice, and there was formerly a strong castle to defend the town. There are at present but small remains of this fortress, except a tower, which is almost entire, and thought to have been the gateway, and some ruins of walls dispersed here and there. Egremont-castle was built soon after the conquest, by William de Mefchines, brother of Ranulph, the first earl of Cumberland, who gave him the barony of Copeland, in which he was confirmed by king Henry I. when that barony was changed to the barony of Egremont.

There is a weekly market held in this town on Saturdays, and an annual fair on September the nineteenth, for horses and black cattle.

About three miles to the south of Egremont, is a mount or hill, on which are the ruins of a fort or castle, of an oblong form; the main entrance was at the east end,

end, and there is another at the west end, opposite thereto. Near this is a little round hill, now called Cony-garth, about twelve yards high, and six broad at the top, which was made use of as a watch tower; and from it is a fine prospect over all the adjacent country and sea; the fort is called, by the neighbouring inhabitants, Camarvon-castle, and is supposed to be a work of the ancient Britons.

About three miles west of Egremont is a promontory called St. Bees, so named from St. Begagh, or St. Bega, a nun from Ireland, who is said to have founded a small monastery here about the year 650; and a church being built to her memory, houses were afterwards erected near it, and it became in time a town of some note. The nunnery, built by St. Bega, was probably destroyed before the conquest; but there was afterwards a Benedictine priory founded and endowed here by William de Meschines, lord of Copeland, who dedicated it to St. Bega, and made it a cell to the abbey of St. Mary, at York, which was constantly to keep a prior and six monks here. It was endowed partly by himself, partly by his son Ranulph, and by William de Fortibus, earl of Albemarle, and other nobles. At the dissolution it was valued at one hundred and forty-three pounds, seventeen shillings and two-pence, *per annum*. It is now a parochial church, and the impropiator is Sir James Lowther, Bart. There is here a good grammar-school, founded and endowed by Dr. Edmund Grindall, archbishop of Canterbury, who was born here; which school has been since much improved by others. The right of presenting a master is in the provost and fellows of Queen's college, Oxford.

At Wardale, between Egremont and Ambleside, a considerable market town of Westmoreland, there was an altar dug up with this inscription:

DEO SANETTO BELATVCADRO AVRELIVS DIATOVA
ARAE X VOTO POSVIT L. L. M. M.

Another altar dedicated to a local deity, was also found near this place, with the following inscription:

DEO CEAHIO AVR M RTI. ET M S ERVRA CIO PRO
SE ET SVIS. V. S. L. L. M.

Images of various kinds, equestrian statues, eagles, lions, ganymedes, and many other remains of antiquity are still dug up, wherever the ground is opened in this district.

About a mile and a half out of the road to Egremont, is Moncafter, which was formerly a seat belonging to the lordship of Millum, but now is the estate of the Pennington's, who have had a mansion-house there ever since the conquest. This place is said to have been built by the family, to shelter the inhabitants against the cold air of the sea; for the old town was more exposed, but the ruins of it are still remaining.

DESCRIPTION of the ISLE OF MAN.

An opportunity offering while we continued at Egremont, of passing over to the Isle of Man, we determined to visit that island, so long famous in history. It seems to have derived its present name from Mona, an appellation given it by Julius Cæsar. Ptolemy calls it Moneda, and Pliny Monabia, or the remote Mona, to distinguish it from Anglesey, also known to the Romans by the name of Mona.

But however this be, the island was inhabited in the times of the Romans by the Britons, who continued to enjoy it a considerable time; but when they were afterwards dispossessed of the greatest part of their territories by the Saxons, Picts and Scots, it became subject to the latter; and we are informed by Orosius, that towards the end of the fourth century, both Ireland, and the Isle of Man, were inhabited by the Scots, and that the present inhabitants appear to be the descendants of the ancient Scots, from their language, which still bears a near affinity with the Erse, and differs but little from that spoken in the highlands of Scotland, and by the Irish. The Norwegians, however, during their repeated invasions of Britain, conquered this island, as well as most of the western isles of Scotland, over which they set up a king, who had the title of king of the

Isles, who chose the Isle of Man for the place of his residence: but in consequence of a treaty between Magnus IV. king of Norway, and Alexander III. king of Scotland, concluded in the year 1266, the Western isles and Man among the rest, were ceded to the Scots, and in 1270, Alexander, having driven the king of Man out of the island, united it, together with the rest of the western isles, to the crown of Scotland. However, Henry IV. king of England, obtained the possession of the Isle of Man, and gave it to John lord Stanley, in whose family it continued till very lately, when the last lord Stanley, earl of Derby, dying without issue, the duke of Atholl, his sister's son, succeeded him as lord of Man and the isles, and continued in the possession of the island till it was purchased of the duke and duchess of Atholl by his present majesty, in the fifth year of his reign. And it is now under the government, and enjoys the protection of the laws of England.

ANTIQUITIES.

The remains of antiquity in this island are very numerous. The ancient churches round Peel-castle, appear to have been originally pagan temples, and in one of them is still a large stone resembling a tripos. On several of the tombs in these churches are fragments of letters, still so intelligible, as to put it beyond doubt, that they were different inscriptions, in the various characters of the Hebrew, Greek, Latin, Arabian, Saxon, Irish, and Scots languages; and there is, perhaps, no country in which more Runic inscriptions are to be met with than in this island, particularly upon funeral monuments. These inscriptions are generally cut upon long, flat rag-stones, with crosses on one or both sides, and are to be read from the bottom upwards. These inscriptions are generally upon the edge of the stone; and upon the sides are crosses and small figures of men, horses, stags, dogs, birds, and other devices.

In different parts of the island, are many sepulchral tumuli or barrows, in several of which have been found urns, but most of them were broken in digging them up; yet burnt bones, white, and as fresh as when interred, were found in each of them.

In the last century were dug up in this island several brass daggers, and other military instruments of the same metal, well made; and afterwards was found a target, resembling those still to be seen in the highlands of Scotland, studded with nails of gold, without any alloy, and fastened with rivets of the same metal. A very fine silver crucifix was likewise, some years ago, dug up in the island, together with several pieces of ancient gold, silver, and copper coin.

According to the Scottish writers, the inhabitants were converted to Christianity by the care of Crathlint, king of Scotland, who sent bishop Amphibalus here, about the year 360; but it is the more general opinion, that St. Patrick planted Christianity in this island, and erected the episcopal see here in 447.

SITUATION and EXTENT.

The Isle of Man is seated about half way between England and Ireland, directly west of the southern part of Cumberland, and the northern part of Lancashire. It is situated between the fifty-third and fifty-fourth degree of north latitude, and between the fourth and fifth degree of west longitude. It is about thirty miles long, and fifteen broad in the widest part; but the northern point, as well as two promontories to the south, are very narrow. A high ridge of mountains runs almost the whole length of the island; and supplies the inhabitants on either side with firing and water, for abundance of little rivulets run from thence to the sea; and by the sides of them the inhabitants have, for the most part, built their houses.

SOIL, AIR, RIVERS, and NATURAL PRODUCTIONS.

The sides of the mountains are also stored with heath, and excellent peat for fuel. The highest of these mountains

tain called Snafeld, rises about five hundred and eighty yards perpendicular, as appears from their being measured by the barometer. The summit of this mountain affords a fine prospect of England, Scotland, Wales and Ireland. The soil, as in most other places, is very different. To the south it consists of lime stone, and is very fertile. The mountains are cold and less fruitful, but the vallies between them afford good pasture, hay and corn. Towards the north the soil is dry and barren, but might be greatly improved by the use of marle, of which there is sufficient plenty in several of the northern parishes. A large tract of land, called the Curragh, runs the breadth of the Isle between Ramsey and Ballaugh, which is in the northern part of the island, and was formerly a bog, but since its being drained, it has become one of the richest parts of the country; and though the peat is six, eight, and ten feet deep, yet by husbandry and burning, they have obtained a surface of mould that will bear the plough. In this bog have been found very large trees of oak and fir, some of them two feet and a half in diameter, and forty feet long, which the inhabitants suppose have lain there ever since the deluge. It is observable, that the oaks and firs do not lie promiscuously; but where there are plenty of the one, there are generally few or none of the other. In some parts of this tract, there is a remarkable layer of peat, that extends for some miles together, two or three feet in thickness, under a layer of gravel, clay or earth, that is two, three, and even four feet thick. The inhabitants chiefly manure their land with lime and sea-wreck.

Among the quarries of stone here is one of black marble, fit for tomb-stones, and the floors of churches; and also good rocks of lime-stone, which, being burnt with peat or coal, is used to manure barren land. These stones are, in some places, full of petrified shells of different kinds, and such as are not now to be found on these coasts. Here are many quarries of slate, fit for covering houses, of which great quantities are exported. Dr. Gibson observes in his Camden, that, at a place called the Spanish head, is a rock, out of which are wrought long stones resembling beams, fit for mantle trees of twelve or fifteen feet long, and strong enough to bear the weight of the highest stack of chinnies. There are mines of lead, copper and iron, and many hundred tuns of lead have been melted and exported from hence; but here are no coals.

With respect to the rivers of this island, they are all inconsiderable streams; the principal of these are the Selby, which rises near Christchurch, and running a small distance to the east, turns to the north, and falls into Ramsey bay. The White Water runs from north to south, and being joined by an inconsiderable stream, called the Black Water, passes by Douglas, and falls into Douglas bay; these, with some others, are on the east side of the island. On the west are Clanmey, which, after a short course, falls into Dauby bay; and the Neb, which runs north-east, and falls into Peel bay.

The air is sharp and cold in winter, particularly in such places as are exposed to the winds, which are very boisterous; but in all such places as have a natural shelter, the air is as mild as in Lancashire; the frosts being short, and the snow seldom lying long on the ground, especially near the sea. Hence the orchards and gardens produce as good fruit, and necessaries for the kitchen, as any of the neighbouring countries. Though the winds are frequent, and sometimes troublesome, they drive away all noxious vapours, so that no contagious distemper has ever been known in the island, and the inhabitants generally live to a great age.

The black cattle and horses are for the most part less than those of England; but from the late improvements in the cultivation of the land, these have been in the same degree improved, and some have been bred here as large as in other places. They have, indeed, a small hardy breed of horses in the mountains, that are little more than three feet high, and are much coveted by gentlemen abroad for their children; but besides these, they breed horses of a size proper either for the plough or the saddle. In the mountains are a small breed of swine,

called Purrs, which breed and live continually in the mountains, without coming to the houses. Here are also a breed of wild sheep, and both these and the hogs are accounted excellent meat. Among the sheep, they have a species called Loughton, of a buff colour, that have a fine wool, which is made into a pretty cloth, without being dyed; but it is said, that there are neither foxes, badgers, otters, moles, hedgehogs nor snakes, in the island. There is here, however, an airy of eagles, and at least two or three of falcons of a very spirited kind; for which reason king Henry IV. in his grant of this island to Sir John Stanley, first king of Man, of that family, obliged him to present him and his successors, upon the day of their coronation, with a cast of falcons.

In treating of the fowls of this island, we ought not to omit that very near the south-west promontory, called the Mull hill; there is a small island named the Calf of Man, which, at a particular season of the year, is resorted to by a vast number of sea-fowl, particularly puffins, which breed there in the holes of the rabbits; and it is even said, that the rabbits resign their habitations to these fowl during the time they remain on the island. About the middle of August, when the young puffins become sufficiently fledged, and are ready to take wing, the inhabitants of this island catch them in such quantities, that between four and five thousand of them are taken every year, part of which is consumed by the inhabitants, and part of them pickled and sent abroad as presents.

The Isle of Man is well supplied with fish, particularly herrings, of which there is such a considerable fishery, that above twenty-thousand barrels have been frequently exported in one year to France, and other countries. The time of the herring-fishery is between July and Allholland-tide. The whole fleet of boats, each of which is about two tons burthen, is under the government of the water-bailiff on shore, and under an officer at sea, called a vice admiral, who, by the signal of a flag, directs them when to cast their nets. There were due to the lord of the isle, ten shillings from every boat that took above ten mease, every mease being five hundred herrings, and one shilling to the water-bailiff. In acknowledgment of the great blessing of this fishery, and that God may be prevailed with to continue it, every evening before they go to sea, the whole fleet attends divine service on the shore, at the several ports; the respective incumbents on that occasion making use of a form of prayer, lessons, &c. composed for that purpose. Besides this, a petition is inserted in the Litany, and used in the public service throughout the year, for the blessings of the sea.

I N H A B I T A N T S.

The inhabitants are a civilized, orderly people, generally very charitable to the poor, and hospitable to strangers, particularly in the country, where, if a stranger comes to their houses, they would think it an unpardonable crime, not to give him a share of the best provisions and liquors they have in the house. They have ever entertained a profound respect for their lords, especially for those of the house of Derby, who have always treated them with great regard and tenderness. Thin oat-cakes is the common bread of the country.

In their dress they imitate the English; only the poorer sort among the men, especially in the country, wear a kind of sandals of untanned leather, cross laced from the toe to the instep, and gathered about the ankle. People of some fortune have good substantial stone-houses covered with slate; others are thatched; and that the thatch may not be blown off by the boisterous winds, it is secured by a kind of net work formed of straw bands.

CIVIL and ECCLESIASTICAL GOVERNMENT.

Their lords had, for a long time, waved the title of kings, and were only stiled Lords of Man and the Isles, though they continued to enjoy most of the prerogatives of the crown, as giving the final ascent to all laws; the

power of pardoning offenders, and of changing the sentence of death into banishment; of appointing and displacing the governor and officers; with a right to all forfeitures for treason, felony, and self-murder.

The manner in which the lord of Man, at his first accession, received his investiture, and the homage of his people, was as follows. He sat on Tinwald-hill, in a chair of state, with a canopy over his head, in the open air, facing a chapel, where public prayers and a sermon were made on these occasions. Before him his sword was held with the point upward. His barons, namely the bishop and abbot, with the rest, according to their degrees, sat by his side; his benefited men, council and deemsters, sat before him; his gentry and yeomanry, and the twenty-four keys in their order, while the commons stood without the circle, with three clerks in their surplices. The lords appointed a governor, lieutenant or captain, who constantly resided at Castle-town, where he had a handsome house, and a salary suitable to his station. He held a staff in his hand, as the ensign of his authority, and when he took his oath, swore to do right between the lord and his people, *as uprightly as the staff now standeth*. He was to take care that all officers, civil and military, discharged their duty. He was chancellor, and to him was an appeal from the inferior courts, and from him to the lord; and after all, if there was occasion, to the king of Great-Britain in council.

The council of the island consisted of the governor, the bishop, the archdeacon, two vicars general, the receiver-general, the comptroller, the water-bailiff, and the attorney-general, twenty-four men called the Keys, so called from their unlocking, as it were, or solving the difficulties of the laws, formed the representatives of the commons, and two men called deemsters, were the judges, both in cases of common law, and in criminal and capital offences. The council, and the twenty-four keys, passed all new laws, and in conjunction with the deemsters, settled and determined the meaning of the ancient laws and customs of the country. A court was held in the open air on a hill, in the middle of the island, annually on St. John's day, called the Tinwald; it consisted of the governor, the spiritual and temporal officers, with the twenty-four keys, and two deemsters. At this great assembly all the new laws were published, after their having received the assent of the lord of the island; and every person had a right to present any uncommon grievance, and to have his complaint heard in the face of the whole country. The two deemsters are the temporal judges, both in cases of common law, and of life and death; but those disputes that are too trivial to be brought before a court, are decided at their houses. We ought not here to omit the singular oath taken by the deemster when he enters upon his office, it being expressed in these words: "You shall do justice between man and man, as equally as the herring-bone lies between the two sides."

There are many laws peculiar to this island; thus, if there be no son, the eldest daughter inherits. A widow has one half of her husband's real estate, if she be his first wife, and one quarter if she be the second or third; but if any widow marries again, or miscarries, she loses her widow's right in her late husband's estate. A child born before marriage is capable of inheriting, provided the marriage follows within a year or two, and the woman was never defamed before, with regard to any other man. If any man gets a farmer's daughter with child, he is compelled to marry, or endow her with such a portion as her father would have given her. If a single woman prosecutes a single man for a rape, the ecclesiastical judges impanel a jury, and if this jury finds him guilty, he is brought before the temporal courts; where, if he be found guilty, the deemster delivers to the woman a rope, a sword and a ring, and she has it in her choice to have him hanged, or beheaded, or to marry him. These regulations are still observed, so far as is consistent with the inhabitants being at present subject to the king of Great Britain.

The bishop is stiled Bishop of Sodor and Man, and sometimes Sodor de Man. Whence he derived the title

of Sodor is uncertain; and is variously accounted for; but the most probable opinion seems to be, that it arose from a small island within a musket shot of the shore, near the town of Peel, on which is the ancient cathedral, which being dedicated to *Suðr* our Saviour, was originally called *Ecclesia Soterensis*, from which it was corrupted into *Sodorenfis*. He was till lately nominated to the see by the lord of the island, who presented him to the king of Great Britain for his royal assent, and then to the archbishop of York for consecration. The bishop, notwithstanding his being a baron of the island, has no seat in the British parliament. He has a court for his temporalities, where one of the deemsters sits as judge; and he has this remarkable privilege, that if any of his tenants is guilty of a capital crime, and is to be tried for his life, the bishop's steward may demand him from the lord's bar, and try him in the bishop's court, by a jury of his own tenants; and in case of conviction, his lands are forfeited to the bishop, but his goods and person were at the lord's disposal. The ecclesiastical courts are held by the bishop in person, his arch-deacon, his vicars general, or the archdeacon's official, who are the proper judges in all controversies which happen between executors, within a year after probate of a will, or administration granted. The discipline of the church is extremely strict, offenders of all conditions being obliged to submit to its censures, commutation of penances being abolished by law; and such as are guilty of contumacy, are either imprisoned or excommunicated.

In all the courts of the island, as well ecclesiastical as civil, both parties, whether men or women, plead their own causes. It is but of late years, that attorney came into practice. They are still not considered as necessary, and law-suits are determined without any great expence. The manner of summoning a person before a magistrate is pretty singular: upon a piece of thin slate or stone the magistrate makes a mark, which is generally the initial letters of his christian and surname, which being delivered to the proper officer, he shews it to the person summoned, informs him of the time and place, in which he is to make his appearance, and at whose suit; and if he disobey this summons, he is either fined or committed to prison till he pays costs, and gives security for his standing trial.

MANUFACTURES, and TRADE.

The principal manufactures of this island are linen and woollen cloths, considerable quantities of which are exported; the other articles of trade are black cattle, wool, hides, skins, honey, tallow and herrings. By an act passed in the seventh year of his present majesty's reign, several premiums are granted for the encouragement of industry and trade. While this country continued subject to the lords of Man, vast quantities of goods from the East and West Indies, as well as from France, Holland, and other places, were landed here; deposited in ware-houses, and afterwards run ashore on the coast of England, Scotland and Ireland; by which means the revenue of Great Britain was greatly injured; and this rendered it necessary to bring the inhabitants under the immediate subjection of the crown of Great Britain.

With respect to the civil and ecclesiastical divisions, this island is divided into six shreadings, each of which is under the government of a particular magistrate, who is in the nature of a sheriff; and being entrusted with the peace of his district, secures criminals and brings them to justice. The island, as we have already intimated, is a diocese of itself, and lies in the province of York. It contains only seventeen parishes, and four market towns; namely, Castle-town, Douglas, Peel and Ramsey, each of which has its harbours, and a castle or fort for its defence.

MARKET TOWNS.

Castle-town, also called Castle-Ruffen, the metropolis of the island, received its name from a fine ancient

castle, said to have been erected by Guttred, king of Man, about the year 960. This castle, notwithstanding its antiquity, is still a handsome structure, it being built of marble, and is a strong place, surrounded with two broad walls and a moat, over which is a draw bridge, and adjoining to it, within the walls, is a small tower, where state prisoners were formerly confined. Within the castle are held the courts of justice, and on one side of it is the governor's house, which is a spacious and commodious structure, and has a fine chapel, with several offices belonging to the court of chancery. The town stands on the southern coast of the island, on a fine harbour, called Castle-town bay. The buildings here are the most regular of any place in the island, and here the governor keeps his court, and the principal officers of the government reside.

Douglas is situated on the eastern coast, eleven miles north-east of Castle-town. This is the richest and most populous town, and has the best market of any in the island. It has lately increased in the number of its buildings, but the streets are very irregular. There is here a neat chapel, a public school, and several good houses, with excellent vaults and cellars for merchants goods. The harbour is not only the best in the island, but one of the best in the British dominions.

About half a mile from Douglas are still standing the remains of a very magnificent nunnery, in which are several fine monuments, with fragments of inscriptions, one of which is as follows: *ILLUSTRISSIMA MATILDA FILIA—REX MERCIAE—*This Matilda is supposed to have been the daughter of Ethelbert, one of the Saxon kings of Mercia, who is said to have died a recluse. Another monument has the following imperfect inscription: *—CARTESMUNDA VIRGO IMMACULATA—ANNO DOMINI 1230.* This tomb is supposed to have been erected to the memory of Cartesmunda, the beautiful nun of Winchester, who fled from the violence offered her by king John, and who probably took refuge in this monastery, and was interred here.

About five miles to the northward of Castle-town, is a considerable inland village, named Balley-Salley, where formerly stood a religious foundation, begun in 1098, by Mac Manis, governor of the island; but afterwards, Olave, king of Man, granting some possessions here to the abbey of Furnes in Lancashire, Ivo or Evan, abbot of Furnes, erected in 1134 a Cistercian abbey in this place, dedicated to the Virgin Mary, and subordinate to Furnes. In 1192, the Monks removing to Douglas, continued there four years, and then returned to Bally-Salley, where they flourished some years after the general suppression of religious houses in England.

Eleven miles north of Douglas is Ramsfey, which is seated on the north-east coast of the island, and is only remarkable for a good fort, and an excellent harbour; north of which is a spacious bay, in which the greatest fleets may ride at anchor with the utmost safety, from all winds but the north east.

Peel is situated on the western coast, sixteen miles south-west of Ramsfey, and ten miles north-west of Castle-town. It is a place of considerable trade, and has several good houses. Upon a small island close to the town, is Peel-castle, in which is a garrison: this is one of the strongest and best situated castles in the world; for the island upon which it stands is a huge rock, of a stupendous height, above the level of the sea; so that it is inaccessible from all quarters, except the town, from which it is separated by a small strait that may be forded at low water. The castle is surrounded by three walls well planted with cannon. These walls are of a prodigious thickness, and built of a bright, durable stone. The ascent to the castle, from the place of landing to the first wall, is sixty steps cut out of the rock, and on the outside of this exterior wall are four watch towers. From the first to the second wall is an ascent of thirty steps, also cut out of the rock. Within the interior wall round the castle, are the remains of three churches, so decayed, that they contain only the walls and a few tombs. There is here also a fourth church, which is the cathedral of the island, and is dedicated to

St. Germain, the first bishop of Man. This structure is kept in better repair, and within it is a chapel appropriated to the use of the bishop, under which is a dungeon, for such offenders as incur the punishment of imprisonment, in virtue of a sentence of the ecclesiastical courts; and is represented as one of the most dreadful places of confinement that imagination can form. The castle is said to be amazingly magnificent, and that the largeness and loftiness of the rooms, the fine echoes resounding through them, the many winding galleries and the prospect of the sea and ships from such an eminence, fill the minds of the spectators with astonishment.

The bishop has his residence in the parish of Kirk Michael, where he has a good house and chapel, with large gardens and pleasant walks, sheltered with groves of fruit and forest trees, and so well situated in the middle of the island, that from thence it is easy for him to visit any part of his diocese, and to return home in the same day.

With respect to the religious foundations not yet mentioned, we have only to add, that at Bemakan, a village in Kirk Harberry parish, was a house of Minor Friars, founded in the year 1373.

And at Ballamona, Godred, king of Man, founded a monastery in 1176, but it was afterwards granted to the abbey of Bally-Salley, to which the monks removed.

Having satisfied our curiosity with regard to the Isle of Man, we again returned to Egremont, in order to pursue our tour through the county of Cumberland, and next visited Ravenglas, generally supposed to derive its name from the Irish words Ravigh and Glas, which signify a braky green, such being the soil on which it stands; though some are of opinion, the original name was Avonglas, a word signifying a sky-coloured river. It is a well built town, situated between the rivers Esk, Irt, and Mute, two hundred and seventy-two miles from London. The Esk and Mute falling here into the sea, form a good harbour for ships; and the inhabitants have a considerable fishery, with the privilege of taking wood from the royal forests or manors, to make the engines, or weirs, called fish garths, in the river Esk, which was granted them by king John, and which they still enjoy.

This town has a weekly market on Saturdays, and two annual fairs, viz. June the eighth, and August the fifth, for horses, black cattle and yarn.

Carlton is a small village about six miles north-west of Ravenglas, and a mile and an half out of the road, seated at the mouth of the river Irt, chiefly inhabited by husbandmen.

At about two miles distance from it to the north-east is Irton, a village on the river Irt, at the mouth of which the inhabitants formerly used to fish for pearl-muscles, and some gentlemen even procured a patent for that purpose; but it turned out to no considerable advantage. It was the estate and manor of the Irtons, of which was Ralph de Irton, bishop of Carlisle, in 1280.

We passed from hence to Bootle, or Bowtel, situated near the southern extremity of the county, two hundred and seventy miles from London. This was formerly the inheritance of the Cowplands, who held it soon after the conquest, giving name to this extremity of the county. It is a small inconsiderable town, of note but for a weekly market on Wednesdays, and two annual fairs, viz. on April the fifth, and September the twenty-fourth, for cloth and corn.

From Bootle we continued our journey to Keswick, situated near the north-west end of the lake Derwent-water, in a fertile plain, two hundred and eighty-three miles from London. It is almost encompassed with the mountains, called Derwent-Fells, on which the waters that rise from below are perpetually condensed. The air of this town is mild, it being particularly sheltered from the north winds by the lofty mountain called Skiddow. The town is, however, greatly decayed, and much inferior to what it was formerly. It consists chiefly of one long street, and has a work-house for the poor of the place erected in the reign of king Charles I.

by Sir John Banks, knight, a native of this town. Kefwick has been long noted for having within its neighbourhood mines of the finest black lead in the world; hence it is chiefly inhabited by miners, and many of the poorer inhabitants subsist by carrying on a trade with strolling Jews with black-lead, clandestinely procured. Here is a weekly market on Saturdays, and an annual fair held on the second of August, for leather and woollen yarn.

Among the natural curiosities of this county we may justly reckon the mountains, some of which, for their height, are extremely remarkable; particularly Hard-knot-hill, Wry-nose, and Skiddaw. Hard-knot-hill, at the foot of which rises the river Esk, is a ragged mountain, so steep that it is almost impossible to ascend it; yet about an hundred and fifty years ago, some huge stones were discovered upon the very summit, which Camden supposed to have been the foundation of a castle, but which may with greater probability be considered as the ruins of some church or chapel; for in the early ages of christianity, it was esteemed a work of most meritorious devotion, to erect crosses and build chapels upon the tops of the highest hills and promontories, not only because they were more conspicuous, but because they were proportionably nearer to heaven; such buildings were generally dedicated to St. Michael, and it was from such chapels and crosses that the ridge of mountains which run along the east side of this county, on the borders of Northumberland, obtained the name of Cross Fells, for they were before called Fiends, or Devil's Fells; and a small town at the bottom of them, about two miles distant from Hexham, in Northumberland, still bears the name of Dilston, which is a corruption of Devil's Town, the name by which it is called in some ancient records still extant.

Wry-nose is situated about a mile south-east of Hard-knot-hill, near the high road from Penrith to Kirby, a market-town in Lancashire. Near this road, and on the top of the mountain, are three stones, commonly called shire stones, which, though they lie within a foot one of another, are yet in three counties; one in Cumberland, another in Westmoreland, and the third in Lancashire.

Skiddaw stands north of Kefwick, and at a prodigious height; divides like Parnassus into two heads, from whence there is a view of Scroffel-hill, in the shire of Annandale, in Scotland, where the people prognosticate a change of weather by the mists that rise or fall upon the tops of this mountain, according to the following proverbial rhyme:

If Skiddaw have a cap,
Scroffel wots full well of that.

Besides the three mountains above-mentioned, there are two others, called Lanvelling and Castinand, which are joined in a couplet of the same age and kind as the foregoing:

Skiddaw, Lanvelling, and Castinand,
Are the highest hills in all England.

But the most remarkable particulars in the mountains are the black-lead or wade-mines, situated near Kefwick. On the left of the road leading from that town to the mines, is a ridge of rude craggy rocks, extending near four miles; and on the right is Kefwick-Lake, beyond which is a group of pyramidal hills, which form an uncommon appearance. At the head of this lake the Derwent is contracted to a narrow river, and runs between two precipices, whose summits are covered with wood, and are eight hundred yards in perpendicular height. On the west side of the Derwent, in this streight, and directly under one of these stupendous precipices, lies the village of Grange.

After passing this gut, the Bowder stone of Barrowdale presents itself to the traveller's view. This is by much the largest stone in England, being at least equal in size to a first rate man of war. It lies close to the road side on the right hand, and appears to have been a fragment detached from the precipice above, by lightning, or perhaps an earthquake. The road now proceeds through groves of hazel, which grow here with great luxuriance, and bear excellent nuts.

Barrowdale chapel, the area of which is scarcely equal to that of a pidgeon-cote, and its height much less, is situated on the left hand; but before you come to it the valley expands, and the two streams, which are here divided, form the Derwent by their union. The curious traveller now enters another narrow valley, winding through mountains totally barren; and after an hour's travelling, arrives at Leathwaite, which is just under the mines, and near ten miles ride from Kefwick. A dreadful scene now presents itself to view, a steep mountain, above seven hundred yards high, is to be climbed on foot; here the precipices are surprizingly variegated with apices, prominences, spouting jets of water, cataracts, and rivers precipitated from the cliffs with an alarming noise. After passing one of these rivers over a wretched foot-bridge the traveller begins to ascend, when in about an hour he reaches the spot where the interloping miners dig with mattocks, and other instruments, in the rubbish of the mines, that were formerly wrought, for lumps of black lead, by selling which these fellows make a livelihood.

The black lead is found in heavy lumps, some being hard, gritty, and of small value, others soft, and of a fine texture. The lumps found in the rubbish seldom exceed half a pound in weight, but those found in the mines are said to weigh six or seven pounds; they work forward for it, and the pits resemble quarries or gravel pits. The hill on which it is found is a dirty brittle clay, interspersed with springs, and in some places shivers of the rock. Black lead grows in great plenty from the bottom of the mountain to the height of above three hundred yards; but the upper part is in a manner entirely barren. This mineral has not any of the qualities of metal, for it will not fuse but calcine in an intense fire. Before its value was discovered, the farmers used it to mark their sheep, as those of the southern countries do ruddle; Mr. Smith, of Wigton, who made an actual survey of the spot, observes, that it is neither the petroleum, the melanteria, nor the pinguitis of the ancients; nor does it agree with any description of Pliny or Aldrovandus. About one hundred and fifty yards above the rubbish, where the interlopers dig, is the miners lodge, to which the ascent is very steep.

After reaching the summit of the black lead hill, there is a large plain to the west, from whence arises another craggy ascent of near five hundred yards in height. The whole mountain is called Unnisterre. On this second precipice not an herb is to be seen, except wild favine, growing in the interstices of the naked rocks. There the prospect is truly dreadful; the horrid projection of vast promontories, the vicinity of the clouds, the thunder of the explosions in the slate quarries, with mountains heaped on mountains all around, fill the mind with a kind of involuntary horror.

On the foot of the Skiddaw, on which the town of Kefwick is situated, is skirted with the lake Basingthwaite, a large piece of water of an oblong figure, about five miles long, and one mile broad, and inclosed by a prodigious range of formidable mountains.

You walk from the town first down to Cockshut-hill, a small rising ground, within the amphitheatre of mountains, and has been lately planted. The view of the lake from hence is very beautiful: you have a most elegant sheet of water at your feet, of the finest colour imaginable, spotted with islands, on which you see five, and are high enough to command the water around them. One is in the middle, of about five acres of grass land, with a house under a clump of trees on one side of it; the whole object beautifully picturesque. You look also upon another planted with Scotch firs; and also upon three others more distant. This is the view of the floor of this noble amphitheatre; the walls are in different stile—sublime. To the left you look first on a hilly rock, partly covered with shrubby wood; and further on, upon a chain of tremendous rocks, near four hundred yards high; their feet are spread with hanging woods, but their heads bear, broken, and irregular. Following the line, the lake seems to lose itself among a wood of rocks and mountains, the tops rising one above another in the wildest manner imaginable. The opposite shore presents

you a full view of a vast range of hills; and behind, you look upon the prince of the surrounding mountains, Skiddow, whose tremendous head rears above the clouds.

Leaving this hill you walk down to your boat, and are struck with the limpid transparency of the water, which almost exceeds belief; the bottom is quite paved with stones, and the white ones glitter through the tremulous curl of the surface like so many diamonds. You row to the left pass, a variety of shore, here rocky and projecting, there low and retiring, coast a planted island, and coming under Wallow Crag, one of the immense rocks before mentioned, you have from its foot a very fine view. The surrounding rocks and mountains are truly noble; the crag above you, fringed about a third of its height with pendent woods; the lake at your feet breaks beautifully into a bay behind a promontory, called Stable-hills; against it is Brampsholm Island; and over the low part of the promontory you catch the wood on Lord's Island, in a very pleasing manner. The opposite shore is beautifully scattered with hanging woods, and some white houses give a liveliness to the view truly pleasing.

Taking your boat again, and rowing till you are opposite the opening between Wallow and Barrow Crags, the noise of a water-fall unseen, will induce you to land again; walking on to a little ruinous bridge, you look upon a romantic hollow of rocks and woods, with a stream pouring down the clefts in many sheets, and seen among the trees in the most picturesque manner; a romantic scene of rock, and wood, and water thirty feet high.

Rowing from hence, under Barrow Crag, the shore is rocky, and various. Passing some low ground, and landing on a rising one, the view is exquisite. The water breaks in the most beautiful manner imaginable, into bays and sheets, stretching away from the eye most gloriously, between the Stable Hills, Lord's Island, and Vicar's Island. Brampsholm cuts in the middle; and St. Alban's Isle presents his broad side to your full view. At the other end of the lake, the rising hills, part of cultivated, waving inclosures, and part of hanging woods, all scattered with white houses, and the whole crowned with the lofty mountains, are beautifully picturesque, and contrast finely with the view of the south end of the lake, around which the rocks and mountains are tremendously bold, pendent, and threatening.

Following the coast, the shore is thinly fringed with wood; then you row around a projecting land, containing several inclosures, and come under a fine, thick, hanging wood, with a raging torrent breaking through it, over rocks, just seen between the wood and Barrow-side, but heard in the most romantic manner. You next anchor in a bay, the environs of which are dreadful; you are under a monstrous craggy rock, (Throng Crag,) scattered with shrubby wood to the very edge, and almost perpendicular; and moving the eye from the formidable object, you find this end of the lake surrounded with a chain of them, in the boldest and abruptest stile imaginable. The opposite shore of mountains very great; and noise of distant water-falls heard most gloriously.

From hence you coast a dreadful shore of fragments, which time has broken from the towering rocks, many of them of a terrible size; some stopped on the land by larger than themselves, and others rolled into the lake, through a path of desolation, sweeping trees, hillocks, and every thing to the water; the very idea of a small shiver against the boat strikes with horror.

Advancing, you catch the view of a most beautiful water-fall, within the wave of a gentle bend of the rocks; but to enjoy the full luxuriance of this exquisite landscape, it is necessary to land and walk to an opening in the grove, from whence it is seen in surprising beauty.

You look up a tremendous wall of rock perpendicular to the top, scattered with wood, that seems to hang in the air; a large stream rushes out of a cliff near the top, and falls, in the most broken and romantic manner, several hundred feet. It falls in one gush for several yards; a projecting part of the rock breaks it

then into three streams, which are presently quite lost behind hanging woods. Lower down, you again catch it in a single bright sheet, among the surrounding dark wood, in the most elegant picturesque manner that fancy can conceive. Losing itself again behind the intervening trees, it breaks to the view in various scattered streams, half seen, glittering in the sun beams, among the branches of the trees, in the most bewitching colours of nature's clear obscure. Lower still, you again catch it united in one bright rushing fall, in the dark bosom of a fine hollow wood, which finishes the scene. The surrounding hills, rocks, and scattered pendent woods, are all romantic and sublime, and tend nobly to set off this most exquisite touch of rural elegance.

Following to the coast you sail round a sweet little island, a clump of wood growing out of the lake; but it is joined to the main land when the water is very low. From hence, pursuing the voyage, you come into the narrow part of the lake, and have a full view of most romantic terrible craggy rocks, inclosing a most grand and beautiful cascade. It is a view that must astonish the spectator. You look up to two dreadful pointed rocks, of a vast height, which almost hang over your head, partly scattered with shrubby wood, in the wildest taste of nature. Between them is a dreadful precipice of broken craggy rock, over which a raging torrent foams down in one vast sheet of water, several yards wide, just broken into ebullitions by the points of the rocks unseen. At another time we saw it, when the craggy rock appeared, and the stream was broken by it into several gushing torrents, which seemed to issue distinctly from clefts in the rock in the most picturesque manner imaginable. The water is lost in one spot, caught again in another; foaming out of this cleft with rushing impetuosity, and trickling down that with the most pleasing elegance. Nothing can be fancied more grand, more beautiful, or romantic.

Taking a winding walk through the wood, it leads down to a rapid stream which you cross, and presently come to a new and most delicious scene. To the right you catch a side view of the fall just described, in a new direction, and most beautifully embosomed in rock and hanging wood. Full in front you look upon another cascade, which rushes out as it were from the rotten stump of an old tree, and falling down an irregular surface of rock, it breaks into larger and more sheets, some full, others thin and trickling, a most sweet variety. After this, it breaks again, and falls into the stream in fresh beauty, elegantly romantic.

Following the shore into fleet water, you come into a region of most stupendous rocks, broken, and irregularly pointed, in the most abrupt and wild manner imaginable, with monstrous fragments, large as a house, that have tumbled from their heads—Dreadful in the idea!

Pursuing the water to its point, you come into a new and most glorious amphitheatre of rocks and mountains; on one side, craggy, broken, and wildly irregular; and on the other, a vast range of mountain side. The hollow magnificently great.

Going up the river to Grange bridge, under Grange Crag the lake is lost: the prospect new and terrible; a whole sweep of rocks, crags, mountains, and dreadful chafms.

Leaving the boat, and walking up to the village, you gain the view of a cone-like rocky woody hill, rising in the midst of a hollow of mountains, most nobly romantic. From hence following the road to the lake under Brandelow Hill, you have the noblest view of rocks and hills in the world. Grange Crag and Crown Head appear in full view, surrounded by an immense wall of rock and mountain. The effect astonishingly great.

Taking boat again you row round a prodigious fine promontory, beautifully wooded; and upon turning it, you tack about round a most exquisite little island in the bay; and if the water is very high, there are two more very fine woody islands, around which you may row. This little archipelago will entertain a person of the least taste. Nor is the view of the lake's environs unworthy of admiration. The crags and cliffs to the right are tremendous.

mendous. Skiddow fronts you in the sublimest stile: Saddle-back on one side of him rears his head in the boldest manner. To the left you look upon an exceeding fine hanging wood, beautifully spread over a waving hill.

Advancing with the coast you next land at the lead mines, which, if you have a taste for grotto work, will entertain, as a boat may be loaded with spar of various glittering and beautiful kinds. Here also are two curiosities of an uncommon kind, viz. two salt springs.

Sailing along the shore it leads you under a noble hill most beautifully spread with wood; it is covered thick with young timber trees, which grow in the most picturesque manner down to the very water's edge. You next enter a little bay, and look upon a most elegant small round hill, covered with wood, inimitably beautiful. This you also coast, nor can any thing be more truly exquisite than these two slopes of wood, with beautiful inclosures between them, contrasting the sublimity of the rocks and mountains in the noblest stile. Nor should you here forget to remark three or four inclosures on the other side of the lake, down to the water's edge, under Achness Fell; they are exquisite.

Sailing by some very beautiful grass inclosures you catch a white house romantically situated; and then skirting more inclosures, turn round a small but most exquisite promontory, with a sweet clump of trees on it. This leads into a very fine land locked bay, which commands a beautiful sloping hanging wood; the scene enlivened by a white house, quite in the spot of taste. From hence you look over the lake upon Castle-Head-Crag, a fine round of rocky wood rising out of a vale and backed with waving inclosures.

The shore from hence is most beautifully indented and irregular, running up among little hills finely fringed with wood. From hence you wind in and out of several bays and creeks, commanding very picturesque views of the land, and around a most noble hill of shrubby wood covered to the very top. From hence around the town the shore is flat.

Your next view of Keswick must be from land, by walking up the vast rocks and crags first described. This is a journey which will terrify those who have been only used to flat countries. The walk to the highest rock is a mile and half up, and almost perpendicular, horribly rugged, and tremendous; it is rather a climbing crawl than a walk. The path crossed the stream, which forms the first mentioned cascade, in the midst of dreadful cliffs and romantic hollows. The torrent roars beneath you, in some place seen, in others hid by rock and wood.

From hence you climb through a slope of underwood to the edge of a precipice, from which you look down upon the lake and islands in a most beautiful manner; for coming at once upon them, after leaving a thick dark wood, the emotions of surprize and admiration are very great.

Following the path (if it may be so called) you pass many romantic spots, and come to a projection of the hill, from which you look down, not only upon the lake as before, but also upon a semi-circular vale of inclosures, of a most beautiful verdure, which gives a fine curve into the lake. One of the fields is scattered over with trees, which from hence have the most truly picturesque effect imaginable.

Advancing further yet, you come to the head of Craftig-fall, which is a vast opening among these immense rocky mountains, that lets in between them a view across the lake, catching two of the islands, &c in a most beautiful manner; nor can any thing be more horribly romantic than the adjoining ground where you command this sweet view.

At last we gained the top of the crag, and from it the prospect is truly noble; you look down upon the lake, spotted with its islands, so far below as to appear in another region; the lower hills and rocks rise most picturesquely to the view. To the right you look down upon a beautiful vale of cultivated inclosures, whose verdure is painting itself. The town presents its scattered houses, among woods and spreading trees. Above

it rises Skiddow, cloud-topped in a sublime magnitude.

Descending to the town, we took our leave of this enchanting region of landscape, by scaling the formidable walls of Skiddow himself. It is five miles to the top, but the immensity of the view fully repays for the labour of gaining it. You look upon the lake, which here appears no more than a little basin, and its islands but as so many spots; it is surrounded by a prodigious range of rocks and mountains, wild as the waves, sublimely romantic. These dreadful sweeps, the sport of nature in the most violent of her moments, are the most striking objects seen from Skiddow; but in mere extent the view is prodigious.

Before we quit the neighbourhood of Keswick, it may be proper to mention a surprising inundation which happened in the valley of St. John, on the twenty-second of August, 1749. It began with most terrible thunder and incessant lightening, the preceding day having been extremely hot and sultry. The inhabitants, for two hours before the breaking of the cloud, heard a strange noise, like the wind blowing in the tops of high trees. It is thought from the great damage it did in so small a space of time as two hours, to have been a spout or large body of water, which, by the lightening incessantly rarefying the air, broke at once on the tops of the mountains, and descended upon the valley below, which is about three miles long, half a mile broad, and lies nearly east and west, being closed on the south and north sides with prodigious high, steep, and rocky mountains; Legburthet Fells on the north side received almost the whole cataract, for the spout did not extend above a mile in length. It chiefly swelled four small brooks, but to so amazing a degree, that the largest of them, called Catchety Gill, swept away a mill and a kiln in five minutes, leaving the place where they stood covered with fragments of rocks and rubbish three or four yards deep, inasmuch, that one of the mill-stones could not be found. During the violence of the storm, the fragments of rocks which rolled down the mountain, choked up the old course of this brook, but the water forcing its way through a shivery rock, formed a chasm four yards wide, and about eight or nine deep. These brooks lodged such quantities of gravel and sand on the meadows on their borders, that they were irrecoverably lost. Many large pieces of rocks were carried a considerable way into the fields; some larger than a team of ten horses can move, and one of them measuring nineteen yards in circumference.

Having fully surveyed the town and neighbourhood of Keswick, we continued our tour towards Penrith, and in our way visited Highgate-castle, which is founded upon a rock, and the court thereof a natural pavement.

The road then passes by Plumpton-park, which is a very large piece of ground, formerly set apart by the kings of England, for keeping of deer for their own use, as well as for hunting. It was once so well stocked, that king Edward I. is said to have killed two hundred bucks in one day. Camden seems to intimate, that after this was dis-forested by king Henry VIII. he ordered houses to be built; but this is a mistake, for there were many parishes and townships in it, long before that time. Near to this place is Old Perith, already-mentioned, where there have been several stones found with inscriptions, it having been a Roman station.

After the river Eden has received the Eimot, it passes towards the north, and within half a mile of it, on the bank of the river, is a grotto, consisting of two rooms dug out of the rocks, called Isis Parlith. There is now a difficult and dangerous passage thereto; but in former times it was certainly a place of great strength and security; for it had iron gates, which were standing not a great many years ago.

Penrith is nineteen miles south of Carlisle, and two hundred and eighty-two north-west of London. It is situated on a hill called Penrith or Perith-fell, about two miles north of the river Emot, on the borders of the county next to Westmoreland. This is now a town of considerable note, carrying on a great trade, particularly in tanned leather, and the sessions are frequently held here. Penrith is large, populous, and well built;

and in its spacious market-place is a town-house, on which, in several places are represented bears climbing ragged staves. The church is handsome and spacious, having been lately rebuilt; the roof is supported by numerous pillars, the shafts of which are each of one entire stone, of a reddish colour, and were hewn out of a quarry in the neighbourhood of the town. Penrith was formerly fortified to the west with a royal castle belonging to the kings of England, but by which of them it was founded, is at this time uncertain. This castle is now in ruins; it continued in the crown till William III. granted it, together with the honour of Penrith, to William Bentinck, earl of Portland, ancestor to the present duke of Portland.

In the church-yard, on the north side of Penrith, is a sepulchral monument, which we must not pass over. It consists of large pillars, each four yards in height, and about five yards distant one from the other. The inhabitants have a tradition, that they were set up in memory of a knight, named Sir Owen Caesarius, of great strength and stature, inasmuch, that they say his body reached from one pillar to the other, and that the rude figures of bears, which are of stone, and erected two on each side of his grave, between the pillars, are in memory of his great exploits against those creatures, but we do not remember to have ever read that bears infested England; it is therefore more probable, that he killed wild boars, and that the bears were a part of his ensign's armorial. On the out-side of the vestry wall to the north, is also a rude inscription in Latin, signifying that there was a plague in this county in the year 1598, whereof died at Kendal two thousand five hundred, at Richmond two thousand two hundred, at Penrith two thousand two hundred and sixty-six, and at Carlisle one thousand one hundred and ninety-six. The subject of this inscription is the more remarkable, because our historians do not mention any such distemper having raged that year, yet is the circumstance still farther corroborated by the church register of Edenhall, a neighbouring parish, which takes notice of forty-two persons dying of the plague the same year in that little village. Penrith has a considerable weekly market on Tuesdays, and has two annual fairs for horses and horned cattle, namely, on Whitfun-Tuesday, and November the eleventh.

There was formerly at Penrith, a house of grey friars, founded before the reign of Edward II. but its revenue is not known. There are two charity-schools here, one for boys, and the other for girls, both which were by a benefaction of one Mr. Robinson, a citizen of London, who gave fifty-five pounds, *per annum*, to the parish.

In the year 1385, Penrith was burnt by the Scots, who had cruelly ravaged the whole country, taking advantage of the retreat of Richard II. after he had gained many advantages over them, and driven them into their own country, with fire and sword, which was owing to the bad advice of his favourite, and the jealousy he had conceived of the duke of Lancaster. This happened in the eighth year of his reign, and his weak behaviour, on this occasion, was afterwards made a principal article against him.

About six miles from Penrith is Hull's water, a very fine lake. The approach to it is very beautiful; the most advantageous way of seeing it is to take the road up Dunmanlot-hill, for you rise up a very beautiful planted hill, and see nothing of the water till you gain the summit, when the view is uncommonly beautiful. You look down at once upon one sheet of the lake, which appears prodigiously fine. It is an oblong water, cut by islands, three miles long, and a mile and half broad in some places, in others a mile. It is inclosed within an amphitheatre of hills, in front at the end of the reach, projecting down to the water edge, but retiring from it on each side, so as to leave a space of cultivated inclosures between the feet and the lake. The hedges that divide them are scattered with trees; and the fields of both grass and corn, waving in beautiful slopes from the water, interdicted by hedges, in the most picturesque manner.

Upon the right, a bold swelling hill of turf rises with a fine air of grandeur. - Another view from off this hill is on to a mountain's side, which presents to the eye a swelling slope of turf, and over it Saddle-back rises in a noble stile.

Another view from this hill is down upon a beautiful vale of cultivated inclosures; Mr. Haffel's house at Delmaine, in one part, almost encompassed with a plantation. Here you likewise catch some meanders of the river, through the trees, and hear the roar of a waterfall. This hill is itself a very fine object, viewed every way, but the simplicity of its effect is destroyed, by being cut by a double stripe of Scotch firs across it, which varies the colour of the verdure, and consequently breaks the unity of the view.

Another point of view from which this part of the lake is seen to good advantage, is from off Soulby Fell. You look down upon the water, which spreads very finely to the view, bounded to the right by the hills, which rise from the very water; at the other, by Dunmanlot-hill; in front, by a fine range of inclosures, rising most beautifully to the view, and the water's edge skirted by trees, in a most picturesque manner.

Directing your course under the lake, and landing at Swarth Fell, the next business should be to mount its height. The lake winds at your feet like a noble river; the opposite banks, beautiful inclosures, exquisitely fringed with trees; and some little narrow slips, like promontories, jet into it with the most picturesque effect imaginable; and at the same time hear the noise of a water-fall beneath, but unseen.

Taking boat again, and sailing with the course of the lake, you turn with its bend, and come into a very fine sheet of water, which appears like a lake of itself. It is under Howtown and Hawling Fell. The environs here are very striking; cultivated inclosures on one side, crowned with the tops of hills; and on the other, a woody craggy hill down to the very water's edge. The effect fine.

Next you double Hawling Fell, and come again into a new sheet of water, under Martindale Fell, which is a prodigious fine hill, of a bold, abrupt form; and between that and Hawling Fell, a little rising wave of cultivated inclosures, skirted with trees; the fields of the finest verdure, and the picturesque appearance of the whole most exquisitely pleasing. It is a most delicious spot, within an amphitheatre of rugged hills.

Following the bend of the water under New Crag, the views are more romantic than in any part hitherto seen. New Crag, to the right, rears a bold, abrupt head, in a stile truly sublime; and passing it a little, the opposite shore is very noble. Martindale Fell rises steep from the water's edge, and presents a bold wall of mountain; really glorious. In front, the hills are craggy, broken, and irregular in shape (not height) like those of Keswick. They project so boldly to the very water, that the outlet or wind of the water is shut by them from the eye. It seems inclosed by a shore of steep hills and crags. From hence to the end of the lake, which there is sprinkled by three or four small islands, the views are in the same stile, very wild and romantic. It is an exceedingly pleasing entertainment to sail about this fine lake, which is nineteen miles round, and presents to the eye several very fine sheets of water; and abounds, for another amusement, with noble fish; pike to thirty pounds weight; perch to six pounds; trout to six; besides many other sorts. The water is of a most beautiful colour, and admirably transparent.

From Penrith, a road extends north-east to Newcastle in Northumberland. At about a mile north of this road, and four north-west of Penrith, are the two Salkelds, at the lesser of them are two circles, consisting of seventy-seven stones, each ten feet high, and before them at the entrance stands one by itself, which is fifteen feet. This the common people call Long-meg, and the rest her daughters. Within the circle there are two heaps of stones, under which the inhabitants suppose there are dead bodies buried; and Camden thinks it very probable, as he imagines the great stones are the monument of some victory. However, the annotator is of opinion, that

that the stones in the middle are no part of the monument; but have been gathered off the adjacent ploughed lands, and have been thrown together here as in a waste corner of the field; and as to the great stone, there is reason to believe, that this was formerly a Druid temple.

At two miles and a half to the north of this road, and eight miles north-east of Penrith, is Kirk-Oswald; situated on the east side of the river Eden. It is at present a town of no great note, but was formerly famous for its castle, founded soon after the conquest, by Radulph Engaine, lord of Kirk-Oswald, and afterwards came by marriage to Sir Hugh Mervill, one of the four knights who killed Thomas a Becket; the sword with which he killed him is said to have been kept here for some time. The castle next came by marriage to the Moltons; and then, in the reign of king Edward III. to the Dacres, in which family it continued till the reign of queen Elizabeth, when by marriage of the heiress, it came to the family of the Leonards, earls of Suffex, in which it continued till the reign of queen Anne, when the last earl of that name dying without issue male, it was exposed to sale, and purchased by Sir Christopher Musgrave, Bart. This castle, if we may judge by the ruins, must have been large and extensive; many of the walls are yet standing with an hexagonal tower still entire, having battlements on its top. Kirk-Oswald, which received its name from the church being dedicated to St. Oswald, has a weekly market on Thursdays, and two annual fairs for horned cattle, on the Thursday before Whit Sunday, and August the fifth.

Proceeding on the same road, at the distance of eighteen miles north-east of Penrith, is Alston-More, a market-town on the eastern borders of the county near Northumberland, on the road leading from Penrith to Newcastle. It is not a place of any great consequence, which may be the reason why our modern geographers have omitted to mention it. Near this town the river South Tine takes its rise, and there is in the neighbourhood an ancient copper mine. The market is held on Saturdays, and there are two annual fairs, namely, on the last Thursday in May, and the first Thursday in September, for horned cattle, horses, linnen and woollen cloth.

Curious PLANTS found in Cumberland.

Jagged yellow rocket of the Isle of Man. *Eruca Monensis laciniata lutea*. Found plentifully on the sea-bank in Sella fields.

Sea Buglafs. *Ecchium marinum*, P. B. Found in great plenty on the sea-shore near White-haven.

Water gilly-flower or Gladiole. *Gladiolus lacustris Dortmanni Clus.* Found in the lake called Hull's-water, that parts Westmoreland and Cumberland.

English wood-vetch. *Probus sylvaticus nostras.* Found in the hedges and pastures between Perith and New-castle.

The great bilberry-bush. *Idea foliis subrotundis major*, Ger. Found in wet marshy grounds.

Small knotted and variegated horse-tail. *Equisetum nudum variegatum minus.* Found in many places in a light sandy soil.

Bastard-hemp, with a large white flower. *Cannabis spuria fere magno albo perelegante.* Found about Blencarn in great plenty.

REMARKS on the SEA-COASTS of Cumberland.

The coast of Cumberland is, in general, very high land, and the shore edged with sands. The channel of the Solway Frith is but narrow, though ships of very considerable burden may enter it. A little to the southward of Solway-frith, is a very considerable bay, at the bottom of which the town of Abbey-holm is situated. It is about two miles broad at the entrance, and capacious enough to hold a very considerable fleet of ships.

The mouth of the Eln is navigable to a village called Derham, but is little frequented, there being no place of note in the neighbourhood. The harbour of Whitehaven is well frequented, a great trade being carried on there especially in the exportation of coals.

About five miles to the south-ward of Whitehaven is St. Bees-head, before which a sand stretches out above a mile from the beach. And about a quarter of a mile from the head is a large rock, dry at low water, but separated, at about half-flood from the main land.

The port of Egremont is capable of receiving ships of considerable burden; and a large sand, called the Burr, stretching before the harbour, forms an excellent road, where vessels may ride in two fathom water.

A large sand, called Whedbeck-head, stretches a very considerable distance along the coast from the haven of Ravinglafs, to Milburn-castle. And without it, at about a mile distance, is a small shoal called the Tanner; They are both dry at Low-water, and there are three fathoms water close to these sands.

MEMBERS of PARLIAMENT for Cumberland.

This county sends six members to parliament, two knights of the shire for the county; two members for the city of Carlisle, and two for Cockermouth,

W E S T M O R E L A N D.

THIS county, which has its name from its western situation, and the nature of its soil, which is principally moorish, is bounded on the west and north-west by Cumberland; on the north-east by the bishopric of Durham; on the east by Yorkshire; and on the south by Lancashire. It extends in length from east to west about forty-seven miles; and in breadth from north to south forty-five; and about one hundred and thirty in circumference. It is not, like other counties, divided into hundreds, but into two wards, and each of these wards into constablewicks. It contains sixty-four parishes, in which are eight market-towns, and about six thousand six hundred houses. It lies in the province of York, and partly in the diocese of Carlisle, and partly in that of Chester.

Westmoreland is one of the counties which, in the time of the Romans, was inhabited by a tribe of ancient Britons, called the Brigantes, of whom some account has been given among the antiquities of the county of Cumberland. The traces of two military ways of the Romans are still visible in this county, upon one of which several relics of very remote antiquity have been discovered. It runs south-east from the city of Carlisle, in Cumberland, to Penrith, near which it passes the river Eimot into Westmoreland; and crossing the county in nearly the same direction through Appleby, enters Yorkshire at Rearcross, north-east of Brough, under Stanmore. The other Roman highway, commonly called the Marden-way, enters the north-east part of this county at Rere, or Roy-cross, and from thence passes to Maiden castle, a small square fort, by some supposed to have been originally built by the Romans. After this it runs to Brough, and over Brough-fair hill. Then leaving Warcop on the left, it passes over Sandford-moor to Coupland Beckbrig, where, on the right are the ruined foundations of a noble round tower, and on the left is Ormside-hall; from whence it passes to Appleby, and to the camps on Crakerthorp-moor; then by Kirkby Thore, and through Sowerby. Afterwards it takes its course by Wingfield-park to Harthall-tree. From hence it extends directly westward to the Countess's pillar, erected by Anne, countess dowager of Pembroke, and adorned with coats of arms, dials, and other embellishments, with a small obelisk on the top, and an inscription on brass, in which it is observed, that this is the place where she parted with her mother, and that she left four pounds a year, to be distributed to the poor of the parish of Brougham, every second of April for ever. From this pillar the way leads to Brougham castle, and from thence passes directly over Lowther bridge into Cumberland.

In the time of the Saxons, this county was subject to the kings of the Northumbers. In those early times the mountains in the southern part of this county were of great use in restraining the inroads of the Scots and Picts, and the inhabitants, being hardened and inured to war by their constant alarms and frequent skirmishes with their northern enemies, were considered as a kind of foldiers.

In the reign of William I. this county seems to have been overlooked, either on account of its apparent barrenness, or its remoteness from the capital; for its lands were not disposed of till the reign of king John, who rewarded the great services of Robert de Vipont, who had attended him at the battle of Mirabel, where he gained a complete victory over the French, with a grant of the castles of Battle and Brough, and the whole bailiwick of Westmoreland.

R I V E R S.

This county is watered by some lakes, or large bodies of water, which, in the north of England, are generally called Meres. The principal of these are Winander-mere and Ulles-water.

Winander-mere, which probably received its name from its winding banks, lies to the south of Ambleside, upon the borders of Cumberland, in the western limits of the county, and is about ten miles in length from north to south, and two in breadth. The water is exceeding clear; it has several islands, and the bottom, which is a continued rock, is, in some places, very deep. Of this lake, and these islands, we shall give a particular description.

The Ullis-water is about six miles in length, and, in many places, two in breadth. It is situated in the north-west part of the county, and its southern extremity is about ten miles to the north-ward of Ambleside. This lake is supplied by six small streams, four of which are distinguished by the name of Glenkern river, Glenkwidin river, Glenkridden river, and Haws water, but the other two have no names.

The principal rivers are the Eden, the Loder, the Can, and the Lon.

The Eden rises at Mervel hill, near Askrig in Yorkshire, and runs across Westmoreland and Cumberland, upwards of thirty miles, in which course it is joined by twelve rivulets and brooks, some of which are considerable streams; it passes north-west till it joins the Eimot, by a village called Hornby.

The Eimot rises from the lake called Ullis-water, upon the borders of Cumberland, and running north by Penrith, falls into the Eden.

The Loder is supposed to have received its name from Gladdwr, a British word that signifies clear or limpid water. It issues from a lake called Broad-water, to the south-east of Ullis-water, and running north, falls into the Eimot, near Penrith.

The river Can, Ken, or Kent, rises from a lake called Kent-mere, near Ambleside, and running south-east, passes by Kendal, where, forming an angle, it runs south-west, and falls into a gulf of the Irish sea, at a village called Levensbridge.

The Lon, Lone, or Lune, which gives name to a tract called Lonsdale, that is, the Vale of the Lon, rises near Kirby Lonsdale, and running south-west, after being augmented by several streams, passes into Lancashire, and running by the town of Lancaster, it falls into the Irish sea.

The other less considerable rivers of this county are the Blenkern-Beck, the Swindale-Beck, the Lavennet-Beck; and the Winster.

REMARKS on the INLAND NAVIGATION of Westmoreland.

The only navigable river in this county is the Can, or Ken, which has water sufficient for boats to Kendal. This navigation might be easily improved by art, so as to make the water deep enough for barges, or even vessels of considerable burden. At present it is very indifferent, but serves the purposes of carrying goods from that town to the mouth of the gulph, where they are shipped for exportation. Goods imported from distant ports are brought up to Kendal in the same manner; and proves of great advantage to the town and neighbouring parts.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of this county is sharp and cold, especially in the mountainous parts; but notwithstanding its abounding with lakes and marshes, it is very salubrious, and in the low lands and vallies, sweet and pleasant. A small part of it borders upon the sea, and the inhabitants in general live very comfortably, and enjoy all the necessaries and accommodations of life.

Westmoreland is well stocked with fish; and the red char, a delicate sort of trout, is said to be peculiar to the river Eden, Winander-mere, and Allis-water; but this is a mistake, for it is also met with in several lakes in Wales. These fish swim together in shoals, and though they appear on the surface of the water in summer, they will not suffer themselves to be caught; and the only season for catching them is, when they resort to the shallow parts of the lake, in order to spawn.

This county consists of two divisions, the barony of Westmoreland sometimes called Bottom, and the Barony of Kendal. The barony of Westmoreland, which includes the north part of the county, is an open champaign country, twenty miles long, and fourteen broad, consisting of arable and pasture land. The Barony of Kendal, which is so called from the town of that name, comprehends the south part of the county, and is very mountainous; it has however fruitful vallies, and even many of the mountains yield pasture for sheep and cattle, while others are not only barren, but seem formed of rocks thrown together by some violent convulsion of nature, and frightful desarts laid waste by ravaging storms. The roads, or rather paths, between the mountains, are often frightful beyond description. One in particular, about a mile from Wildbore-Fell, deserves notice. It runs along the side of an almost perpendicular mountain, and is not above six feet wide. Above, enormous projections of rocks hang over the head of the traveller, and threaten to crush him by their fall; while far below, a rapid torrent tumbles headlong into the valley, and with its bellowing noise excites a terror in the mind that language cannot paint. Not a shrub nor blade of grass enlivens the prospect, the whole side of the mountain appearing as if blasted by lightning. But though the general aspect of this part of the country is so frightful, and the roads, in some parts, remarkably dangerous; yet between these mountains are vallies equally remarkable for their beauty and fertility. One of these we shall describe, from a letter sent by a gentleman who travelled thither, in order to visit a friend, who resided in that delightful retreat. It is of a circular form, about a mile in diameter, and surrounded by prodigious mountains, whose tops, except those to the south, are concealed in the clouds. Between these mountains are two breaches, the only passages into this delightful valley; one to the west, the other on the south. Through the latter, a large stream of water flows from a lake, situated on the south side of the valley, and supplied by two cataracts, which fall from rock to rock, down the sides of the mountains. The declivity of the northern hills being exposed to the prolific rays of the sun, produces plenty of corn, and the cultivated parts are bounded by trees, whose lovely verdure, contrasted with the yellow ears of waving corn, and the glowing blossoms of flowery shrubs, in the fences of the corn fields, exhibit the most delightful prospect. The greatest part of the valley itself is divided into fields of pasture, on which abundance of horned cattle and sheep are constantly fed. The above-mentioned lake is well stored with fish of various kinds, and several small islands interspersed in it, add greatly to the beauty of this luxuriant retreat, which affords every thing necessary to render life agreeable.

One of the cascades that supply the lake with water, rushes down the mountain's side in a fine sheet of water, foaming among the rocks, till it reaches the valley, and from thence glides along a stony channel into the lake. The other is much less, and its course down the declivity not so rapid; but its various falls and windings among the rocks, render it more pleasing to the sight than the former. Facing this small cascade, at the foot

of the northern mountains, are a chapel, and a few farm-houses and cottages, the dwellings of husbandmen, the only inhabitants of this unfrequented vale. But the declivity of the southern mountains, which face the north, and thence enjoy the benefit of the solar rays, only a small part of the year, exhibit a picture of desolation, a dreary waste of naked rocks and tremendous precipices, whose forbidding aspect forms a striking contrast to the luxuriant parts, and renders the prospect more pleasing and delightful.

The western mountains of this county are supposed to contain vast quantities of copper-ore, and some veins of gold; but as the expence of getting the ores, on account of their depth and other inconveniencies, have been found more than equivalent to the value of the metals obtained, the design of working those mines has been laid aside.

With respect to the moorish grounds of this county, their spongy surface serves the inhabitants for firing where they have no coals, and the turf is called peat.

The hills are stocked with grouse, both black and red. The game breed on the top of the hills, where they continue the year round; but the black frequent the bottom, and when they gain strength enough, fly into Cumberland and Northumberland, but return hither again in the summer to breed.

REMARKS on the HUSBANDRY of this County.

The husbandry of this county is various in different parts like the soil. In the neighbourhood of Burton, and Holme, the soil is a light loam, on a limestone stratum, mixed with sand; and lets from six shillings and eight-pence, to three pounds an acre; or about twenty shillings on an average; and the farms are from twenty to eighty pounds a year.

Their course of crops are as follows:

1. Fallow,
2. Wheat,
3. Barley,
4. Oats, and then let it lie to graze itself.

Others follow a different course; as

1. Fallow,
2. Wheat,
3. Barley,
4. Clover,
5. Wheat,
6. Oats,
7. Barley,
8. Oats, and then let it lie as before.

They sow two bushels of wheat upon an acre about Michaelmas, and reap from twelve to fifteen. They plow twice for barley, and sow about three bushels on an acre, about the end of April, or beginning of May, and reckon the average produce about twenty bushels. They plough but once for oats, sow four bushels upon an acre, and reap twenty-four. They cultivate some beans, plough but once, sow two bushels on an acre, never hoe them, and reap, on an average, twenty-three bushels. They plough only once for rye, sow two bushels, and reckon the crop from twelve to fifteen. Their culture of potatoes is as follows: they dung the ground well, lay eighteen bushels of the slices on the dung, and then dig trenches two spits wide, and cover the sets, which are laid seven inches square, with the turf and mould that rise; and if weeds come, they draw them out by hand. The crop, at an average, is one hundred and eighty bushels per acre. After them, they sow barley, and get thirty bushels an acre. This is a very indolent method.

As to manure, they have but little; lime has been lately introduced among them, and they lay ninety or a hundred bushels of it on an acre, to fallow for wheat; the lime costs four-pence half-penny a bushel. They are not acquainted with pairing and burning; they stack their hay in houses, but know nothing of chopping their straw.

Good grass they let from two to three pounds an acre, and use it chiefly for the dairy. An acre and a quarter, or an acre and a half, they reckon sufficient for the sum-

mer feed of a cow; and an acre to keep four or five sheep. Their cows give four gallons of milk a day, on an average. To ten cows, they keep two or three swine; sheep they reckon hurtful among milch-cows; their flocks are from twenty to one hundred and fifty, and their profit five or six-shillings a sheep. These they keep all the year in the field.

In the tillage of their land, they reckon four horses necessary for fifty acres of arable land; use three or four in a plough, and do three roods a day.

The soil about Shapp is generally a loam upon a lime-stone, in some places, thin, but in others deep, and lets from one shilling to twenty an acre; but the inclosures generally at twenty shillings. Their course is as follows:

1. Break up and sow oats,
2. Oats again,
3. Barley,
4. Oats,
5. Fallow.

They plough only once for barley, sow two and reap about twenty bushels. For oats they plough thrice, sow seven bushels and a half, and gain thirty-five. They use two or three horses in a plough, and generally turn up an acre a day. Good grass land lets from twenty to twenty-five shillings an acre, if useful both for the dairy and fattening cattle, but chiefly the latter; and an acre is sufficient to keep a cow, or six sheep through the summer. The winter food of the cows, in general, hay, but sometimes straw.

Prices of L A B O U R.

In harvest, 1s. a day, and board.

In hay-time the same.

In winter, 6d. and board.

Reaping, 8s. to 8s. 6d. per acre.

Ditching, 6d. $\frac{1}{2}$ a rood.

M A N U F A C T U R E S.

The chief manufactures of this county are stockings and woollen cloth.

M A R K E T T O W N S, &c.

The market towns are Ambleside, Appleby, Brough, Burton, Kendal, Kirkby-Lonsdale, Kirby-Steven, and Orton.

We entered this county at Milburn forest, and passed on to Brough, or Burgh under Stanmore; a name signifying a borough under a stony mountain, which it received from its situation at the foot of a mountain, two hundred and fifty-five miles from London. It is divided into two parts, one called Upper Brough, and Church Brough, and the other called Lower Brough, and Market Brough. In the Upper Brough stands the church, with a castle and fort, called Cæsar's tower; and in the other division is the market-place.

This town was the Verteræ of the Romans, where a prefect was stationed with a band of the directoræ, which is proved from the course of the military way, the remains of which are in general so grand and so seldom interrupted that no difficulty can arise concerning it. Besides, on a neighbouring mountain called Brough-fair-hill, there are found tumuli or barrows, the ancient burying-places of the Roman soldiers.

In the year 1521, Cæsar's tower was accidentally consumed by fire; but was rebuilt in 1661, by the lady Ann Clifford, after having lain in ruins one hundred and forty years.

The town is now become very small. It still however retains a weekly market on Wednesdays, and an annual fair held on the Thursday before Whit-Sunday, for horned cattle and sheep. There is also a fair on Brough-hill on the thirtieth of September, for horses, black cattle, and divers commodities.

From hence we proceeded to Kirby Steven, situated near the skirt of the hills that separate this county from Yorkshire, two hundred and twenty-three miles from

London. Here is a handsome church; but a late writer has observed that it is low, and the porch resembles the entrance into an hermit's cell. The steeple is built on a lime-stone rock, and has a new geometrical stair-case, turned round a cylindrical column, which leads into a decent gallery of good workmanship, at the west end of the church. The steeple is about fifty-four feet high, and has four bells of a considerable size; and the newest, which is much the largest, was put up in 1749. The carpenter who then new-hung them, having made his bargain for the old frames, it happened, that as he was throwing down the last piece, a great nail which he had not perceived, caught hold of his cloaths, and the piece of timber being heavy, drew him after it from a window forty-five feet high, and dashed out his brains against some of the timber he had thrown out before: an accident for which he was the more pitied, as he had just completed his job, and was in haste to return with the money to his wife and family at Appleby. In this church are the monuments of several persons of high rank, and particularly of Andrew Herclay, earl of Carlisle, who was beheaded by order of Edward II. upon the pretence of his having betrayed the English army at Byland abbey, near York, into the hands of Bruce, king of Scotland, when Edward himself escaped with great difficulty, and is said to have condemned this nobleman, in order to confer the ignominy of his own misconduct on another. Here is also the family vault of the lord Wharton, which title is now extinct, through the misconduct of the late duke, who was remarkable for misapplying the greatest abilities. The town has a free-school, and a manufacture of yarn stockings; with a market on Mondays, three annual fairs, viz. Easter Monday, Whitsun-Tuesday, and St. Luke's, old stile, for horned cattle, sheep, and flax.

About three miles south-west of Kirby-Steven, is Pendragon-castle, which was entirely destroyed by the Scots under king David, in the year 1341. It was anciently the seat of the noble family of the Cliffords, and was once a very strong building, the walls being four yards thick, with battlements on the top. It was in a manner rebuilt by the lady Anne Clifford, countess dowager of Pembroke, three hundred and twenty years after its having been destroyed by the Scots. The river Eden runs close by the east side of the castle, and on the other sides are great trenches, which look as if the founder had intended to draw water into them, and thus encompass the castle with a moat.

From Kirby-Steven we pursued our journey to Appleby, which is pleasantly seated on the north bank of the river Eden, by which it is almost surrounded, two hundred and seventy-nine miles from London. This is a place of great antiquity, and is supposed by Horsley to be the Roman town called Galacum, though that station has, since Camden's time, been generally placed at Kirby-Thure; but that Appleby was the Galacum of the Romans, appears from its situation being more agreeable to the distance mentioned in the Itinerary. Some suppose it to have been Aballaba, one of the stations by the line of the vallum, mentioned in the Notitia; but Horsley has plainly proved, that this station was nearer the wall; and as for the station at Kirby-Thure, he has shewn it to be the Brovonacæ of the Romans. In more modern times here was a house of White-friars, said to be founded by lord Vesey, lord Percy, and the lord Clifford, in the year 1281.

Appleby is the county town, and is supposed formerly to have had sheriffs of its own, and to have been a county of itself. King Henry I. gave it privileges equal to those of the city of York, and these were confirmed by Henry II. Henry III. and other succeeding kings. In the reign of Edward I. it had a mayor and two provosts, and is at present governed by a mayor, a recorder, twelve aldermen, a common-council, and two sergeants at mace. It is now, however, greatly gone to decay, and is far from being the richest and handsomest town in the county. It chiefly consists of one broad street, which runs with an easy ascent from north to south. At one end of this street is a castle, fortified by the river, and by large trenches, where the river does not surround it.

it. This castle was given by king John to John de Vipont, or de Veteriponte, as a reward for his good services. It remained in this family till the reign of king Henry III. when Robert de Vipont, joining in a rebellion with Montfert, earl of Leicester, was slain in the battle of Evesham, and his estate being seized, was given to Roger Clifford, and Roger de Leybourne, who had married his daughters. At length, upon the division of the Vipont's estate, this barony fell to the Cliffords, afterwards earls of Cumberland, the ancestors by the mother's side of the earls of Thanet, in whose noble family it still remains. A part of it is at present used as a common gaol for malefactors.

Here are two churches, a free-school, and an hospital, founded in the year 1651, by the lady Anne, daughter and heiress of George, lord Clifford, and endowed for a governess and twelve other widows, commonly called the Mother and Twelve sisters. Appleby has also a town-hall, a county-gaol, and a stone bridge over the river Eden.

Appleby suffered greatly in the wars between England and Scotland; and in the reigns of Henry II. and Richard II. it was burnt to the ground. Besides, in 1598 it was depopulated by the plague; and from these desolations it never fully recovered. It sends two members to parliament, has a good market on Saturdays, which is esteemed the best corn market in all these northern parts, and four annual fairs, viz. Whitsun-Eve, for horned cattle; on Whitsun-Monday, for linen cloth and merchandize; on the tenth of June, for horned cattle and sheep; and on the tenth of August, for horses, sheep and linen cloth.

Two miles north-west of Appleby is Crakenthorp, a village famous for its hall or manor-house, where the lords of the manor have resided ever since the reign of William the Conqueror. It is said to stand on the military road called the Maiden way, near which have been discovered several remarkable camps, and other antiquities.

About four miles north by west of Appleby, is Kirby Thore; or Whelp castle, which Horsley maintains to be the Brovonaecae of Antoninus, it being thirteen miles from Voreda, and the same distance from Old Penrith. It is by some supposed to be the Gelagum or Galatum of the Romans; but the distances, and the visible remains of the station, render it certain, that it was Brovonaecae. It also answers the distance of Brough under Stanmore, which is by all agreed to be the ancient Verterae. It was, doubtless a place of considerable note, and stood upon the old military road called the Maiden-way. Roman coins and urns have been frequently dug up, and a stone with the following inscription:

DEO BELATVCADRO LIB.
VOTV. M. FECIT IOLVS.

It is believed that there was a temple here dedicated to the old Saxon god Thor. A coin relating to this idol was some time ago discovered here of the size of a silver groat, but for what purpose it was coined antiquaries have not agreed.

At Kirby-Thore is a mineral spring of a weak, purging, chalybeate quality, the water of which is clear, sweetish, and somewhat of the taste of tea. If impregnated with alkalis it becomes of a whitish colour; with a solution of silver it turns to a clear purple; gall changes it of a pink purple; logwood of a red purple; and syrup of violets of a deep green. A gallon contains one hundred and ninety grains of sediment, of which one hundred and forty are lime-stone, and fifty a calcareous nitre. The salt will not dissolve entirely in forty-eight times its own weight of distilled water; but it will change of a pale green, with syrup of violets. This water is the most powerful absorbent of any of the same kind, and will purge well, but not without drinking at least the quantity of three or four quarts.

At Crawdendale-Waith, near Kirby-Thore, are several ditches, ramparts, and great mounts of earth, supposed to have been thrown up by the Romans; and upon a rough rock were found two imperfect inscrip-

tions, one above the other. The first is read as follows: VARRONIUS PRÆFECTUS LEGIONIS VICESIMÆ VALENTIS VICTRICIS; and the second; AELIUS LUCANUS PRÆFECTUS LEGIONIS SECUNDÆ AUGUSTÆ CAS-TRAMENTATI SUNT. These inscriptions are very different with regard to the form of the letters; a considerable space of time is therefore supposed to have intervened between the two incidents that gave occasion to them. Upon the same rock was found a third inscription, intimating that the second Augustan legion encamped at this place.

About nine miles to the north-west of Kirby-Thore, and about a mile to the east of Perith, in Cumberland, is Brougham, seated upon the military way to Carlisle, where that way crosses the river Eimot. It is generally believed to be the Roman station Brovoniacum, or Brocovum, in which the company of the defensores were quartered. Though time has reduced this ancient city to an inconsiderable village, and the station is now turned into plowed ground, yet it has preserved the Roman name almost entire; and here have been found several coins, altars, and other testimonies of its splendor and antiquity.

Here was anciently a castle which was part of the lordship of the Viponts, included in the barony of Appleby and Brough, given by king John to Robert de Vipont, from whose descendants it passed to the noble family of the Cliffords. Robert de Clifford entertained at this castle Robert Baliol, king of Scotland, when he came to hunt in the woods and chaces belonging to that nobleman. This castle at present belongs to the earl of Thanet.

At the confluence of the Loder and Eimot, near Brougham, a stone was dug up in the year 1602, inscribed to the memory of Constantine the Great, in these words;

IMP. C. VAL. CONSTANTINO PIEN. AVG.

About three miles west of Brougham is a large round intrenchment, inclosing a plain area, which has two passages opposite to each other, and is called King Arthur's Round Table. The trenches are on the inside, which shew it not to have been designed for a place of strength; but rather a fort of amphitheatre for jousts and tournaments. Near it is a stone fort in the form of a horse-shoe, opening towards the table, called King Arthur's Castle. It is also named Mayburgh, or Maybrough, which in the Saxon tongue signifies the fort of union or alliance, a name which it is supposed to have derived from a peace concluded here in 926, between Athelstan, king of England, Constantine king of Scotland, Hacval king of Wales, and other princes.

We next visited Orton or Overton, a small inconsiderable town situated in a healthy country, quite destitute of wood two hundred and seventy-one miles from London. Here is a weekly market on Fridays and two annual fairs, viz. May the second for black cattle; and the Friday before Whitsunday for black cattle and sheep.

At a small distance from this town is a high hill, which had formerly a beacon on the top, and is still called Orton Beacon.

Eight miles west of Orton is Shapp, formerly called Hep or Heppe, a small village, once famous for an abbey, first built by Thomas the son of Gospatrick, in honour of St. Mary Magdalen, at Preston, in the barony of Kendal; but afterwards removed hither by the founder, and by him endowed with lands and various privileges; among which was that of taking what wood they pleased out of his forest, and grinding at his mill toll free; he also gave them pasture in and about Swindale for sixty cows, twenty mares, five hundred sheep, &c. All these gifts and privileges were confirmed by Robert de Vipont, lord of Westmoreland, and at the dissolution the revenue of this abby was valued at one hundred and fifty-four pound seventeen shillings and seven pence, *per annum*.

Near Shapp, north-west of Orton, several large stones, in the form of pyramids, some of which are fourteen feet diameter at the base, and nine feet high, being placed at equal distances one from another, stand almost in a direct line, a mile long. What was the original intent of placing them there, is not known; but it is generally believed

believed, that they were designed to perpetuate the memory of some great actions which history has not recorded.

At Shapmore, a marshy heath, between the mountains to the north of Shap, is a mineral water that seems to be of a sulphureous nature, for it has a strong foetid smell, and a sensible bitterness; but this soon goes off when it evaporates over the fire. It will curdle with soap, and let fall a large white sediment with the solution of pot-ashes. A gallon will yield three hundred and seventy-six grains of sediment, with a very small proportion of very white earth, which has a salt, pungent bitter taste, and grows moist when exposed to the air. This water has been casually found to work by stool and urine, and three pints have proved a very strong purge. It will cure inveterate piles, and is used by the common people to cure rheumatick pains in the joints, by rubbing it warm on the parts affected.

From Shapp a road leads to Haws-Water, a lake some miles to the westward, extending for some distance along the side of a hill, that commands a fine view of Ponton-Vale, which is several miles in length, of an oblong figure, cut into inclosures of a delightful verdure, and scattered in the most picturesque manner, with villages, clumps of wood, houses and bridges. A fine river takes a beautiful course through it; and its opposite bank is a large ridge of mountains. The approach to the lake is very picturesque: you pass between two high ridges of mountains, the bottom finely spread with inclosures. The lake is a small one, it being only about three miles long, in some places half a mile over, and in others a quarter. It is almost divided in the middle by a promontory of inclosures, so that it consists of two sheets of water. The upper end of it is quite inclosed with bold, steep, craggy rocks and mountains; and in the center of the end, are a few little inclosures at their feet, waving upwards in a very beautiful manner. On the south side of the lake is a noble ridge of mountains, very bold and prominent down to the water's edge, bulging out in the center in a fine pendant broad head, that is venerably magnificent. This, with the view of the first sheet of the lake, losing itself in the second, among hills, rocks, and woods, is picturesque. The opposite shore consists of inclosures rising one above another, and crowned with craggy rocks.

Having viewed this romantic spot we returned back to Shapp, and from thence proceeded to Kendal; but before we enter on a description of that town, it will not be improper, or unwelcome to our readers, to mention the road which leads to it from the above village, which is fifteen miles distant; twelve of them are a continued chain of mountainous moors entirely uncultivated, which affords a dreary and melancholy prospect: yet the soil itself is capable of improvement and cultivation. But after crossing this barren tract, which brings you within three miles of Kendal, you at once look down from this desolate country, upon one of the finest landscapes in the world; a noble range of fertile enclosures, richly enamelled with the most beautiful verdure, presents itself to your eye; and advancing to the brow of the hill, you have a view of a most elegant variegated tract of weaving inclosures spreading over hills, and hanging to the eye, in the most picturesque and pleasing manner that fancy can conceive.

Kendal, or Kirby Kendal, is so called from its situation in a dale or valley on the river Ken or Kent which runs near it along the valley in a stony channel.

Dr. Gale would have this place to be the Brononaca of Antoninus; and Camden was once of opinion, that it was the old Roman station called Concangium, but he afterwards altered his mind; however, Horsley fixes Concangium here or near it, and indeed there are still to be seen at this place undeniable evidences of its having been a Roman station; for Roman inscriptions and altars still remain here; urns have been found in a bank laid open by the river, and stones and pieces of Roman bricks continue to be thrown up by the plough. Several Roman coins and seals have also been found here, one of which is very curious, and is supposed to be Janus

quadrifrons; there has likewise been found a medal of Faustina. The ramparts of the ancient fort are very discernible, and there was lately a faint appearance of the ditch, though much levelled. The station measures about six chains from north to south, and consequently contained five acres of ground. The town is supposed to have stood between the fort and the water, on the west side; for here they still plough up cement and stones. There are also two or three tumuli or barrows at a small distance within sight of the station. This fort, from its situation, overlooks a fine vale, and is encompassed with high hills, which on all sides terminate the view. On the west side of Kendal is a round artificial mount, within sight of the station, very like the exploratory mounts in other places, especially near military ways; but whether it be Roman and had a relation to the station, or more modern, and raised with a view to the castle, over against which it is placed, at about the distance of half a mile, is not easy to determine. At what time, or by whom Kendal castle was built, we cannot find in history; but it may be presumed, that it was the mansion of the ancient barons of Kendal, the first of whom was Ivo Taleboys, of whose posterity William, by consent of Henry the Second, called himself William of Lancaster.

Kendal is now a large, handsome, well built, and well paved town, pleasantly seated on the river Ken, or Kent; two hundred and fifty-seven miles from London. It was incorporated by queen Elizabeth, and is at present governed under a charter of king James the First, by a mayor, a recorder, twelve aldermen, twenty-four burgeses, a town-clerk, and two attorneys, with other subordinate officers. It has seven trading companies; the mercers, sheermen, cordwainers, tanners, glovers, taylors, and pewterers, who have each a distinct hall; and here are kept the sessions of the peace for that part of the county called the barony of Kendal. This is the largest town in the county, it being much superior to Appleby in trade, wealth, buildings, and number of inhabitants. It chiefly consists of two great streets neatly paved crossing each other. It stands on the west side of the river, over which there are two stone bridges, and one of wood, which leads to the castle. The church is a large and handsome structure, supported by five rows of pillars; and there belong to it twelve chapels of ease. On the side of the church-yard is a well endowed free-school, which has exhibitions for some scholars to Queen's college in Oxford. Here is also a charity-school for sixteen boys and ten girls, who are all clothed and taught. Kendal has had a considerable trade in the woollen manufacture ever since the reign of Edward III. and particular laws were enacted for regulating the cloth made in this town, as early as the reigns of Richard II. and Henry IV. This town is famous for several manufactories; the chief of them is that of knit stockings, in which it is computed that five thousand hands are employed, including one hundred and twenty wool-combers, and six hundred spinners; and they are said to make five hundred and fifty dozen a week. The making of what is called Kendal cottons, is likewise a considerable manufacture of this town. These are made of Westmoreland wool, which is very coarse, and are chiefly for exportation or sailors jackets; and this branch employs three or four hundred hands, particularly spinners, weavers, and sheermen. Another principal branch of manufacture is linsley woolsey, made chiefly for home consumption, in which about five hundred weavers are employed, the wool being mostly spun by the families of the farmers and labourers, who bring it to market. Here are also about a hundred tanners; and likewise about a hundred hands are employed in the article of silk; these receive the waste silk from London, boil it in soap, comb, spin, dress, and then send it back to London.

Kendal has a weekly market on Saturdays, and two annual fairs, viz. the sixth of May, for horned cattle, and on the 8th of November, for horned cattle, horses and sheep. At this town provisions are very plentiful and cheap: fat stubble-geese are sold at one shilling and

four-pence each; fat fowls at one shilling a couple; fat ducks at the same price. Wild-fowl and game are in such plenty, that woodcocks are often sold at two-pence a piece; and partridges are sold cheap in the market. Fish is in great plenty, and trout frequently sold at a penny a pound.

At Witherlake, a village seven miles south-west of Kendal, is a mineral spring that has a saltish taste, and in summer smells a little like sulphur, throwing up a whitish scum. With oil of tartar it lets fall a pearl-coloured sediment, and with galls it precipitates one that is purple. A gallon yields five hundred and forty-seven grains of sediment, consisting chiefly of a sea-salt and a calcareous earth, with a little mixture of a bitter, purging salt. From experiments made with it it appears, that it is chiefly impregnated with a sea-salt, combined with a kind of calcareous nitre, a little iron, and a small quantity of sulphur. It has been found of great use in the stone, gravel, worms, want of appetite, the cachexy, jaundice, and dropsy.

At Watercrock, near Kendal, is an old square Roman fort, the banks and ditches of which are still visible; and here have been found Roman coins, altars, and other remains of antiquity. It has been the opinion of some, that this was the old Roman station called *Concangii*; but others believe that it was the ancient *Broniacum*.

At Levens, south of Kendal, on the bank of the river Can, over which it has a handsome stone bridge, are still to be seen the ruins of an ancient round building, which is called *Kirkthead*, and is said to have been anciently a temple, dedicated to *Diana*.

From Kendal we continued our tour westward, and came next to *Ambleside*, situated near the north end of the great and beautiful lake, called *Winander-meer*, two hundred and sixty-seven miles from London. It was anciently a large city, as appears from the ruins of walls and the scattered heaps of rubbish, with some remains of a fort, six hundred and sixty feet in length, four hundred in breadth, and secured by a ditch and rampart. That this was a work of the Romans appears from a variety of circumstances, such as the bricks, small urns, glass vials, Roman coins and medals in gold, silver and copper, round stones resembling mill-stones, used by the Romans in building large pillars, and the paved ways leading to it. *Camden* was once of opinion, that this was the *Amboglana* in the *Notitia*, but this is not probable; and, indeed, in another place, he fixes that station at *Willeford*, in *Cumberland*; and *Horsley*, who has examined these matters with, perhaps, greater accuracy than any before him, informs us, that the ancient name of this place was *Diētus*. This town has a considerable manufacture of cloth, a weekly market on *Wednesdays*, and two annual fairs, viz. the first held on *Wednesday* in *Whitsun-week*, for horned cattle; and the other on the twenty-ninth of *October*, for horned cattle and sheep.

About a mile to the north of *Ambleside* is *Ridal-hall*, a large, convenient and ancient structure; and in this lordship is a very high mountain called *Ridal-head*, from the summit of which is a very extensive prospect; for in a clear day *Lancaster castle* may be seen, and even the country at a considerable distance beyond it.

We have already observed, that the town of *Ambleside* is near the great lake, called *Winander-meer*, and we now took the opportunity of viewing that beautiful piece of water. In order to this we repaired to the village of *Bonus*, where we took boat, and rowed to the Island, so called by way of eminence, being much the largest in the lake. It contains between thirty and forty acres of land, and is one of the most beautiful spots in the kingdom. The lake from the south end is extremely fine, and presents a noble sheet of water, extending several miles, and bounded by distant mountains. The shores are beautifully indented with promontories covered with wood jetting into the water in the most picturesque stile imaginable, particularly the ferry points on both sides; it is broke by *Berkshire island*, an elegant spot, finely wooded in one part, and

by *Craw island*, almost covered with wood, in another, and just hides a house on the main land.

The eastern shore is spread forth with the most beautiful variety. In some places waving inclosures of corn and grass rise one above another, and present to the eye a scenery beyond the brightest ideas of painting itself. In others shrubby spots and pendent woods hang down to the very water's edge. In some places these woods are broke by a few small grass inclosures of the sweetest verdure; and in others run round large circuits of them, and, rising to the higher grounds, lose themselves in the wilds above. Here you see slips of land running into the lake, and covered with trees which seem to rise from the water. There, a boldly indented shore, swelling into fine bays, and skirted with spreading trees, an edging as elegant as ever fancied by *Claude* himself. The village is caught among some scattered trees, in a sweet situation, on the bank of a bay, formed by a promontory of wood, the back ground a sweep of inclosures, rising one above another.

Following this line of shoar towards the north, you command *Bannerig* and *Oareft Head*, two hills all cut into inclosures to the very top; to the north you look upon a noble range of irregular mountains, which contrast finely with the other more beautiful shores. The western is a fine sweep of craggy rocks, here and there fringed with wood. Advancing to the very farthest point of land, these objects are varied, and new ones appear that are truly beautiful. The *Lancashire ferry point* and the woody island join, and seem one prodigious fine promontory of wood; the ferry house is seen among the trees in a picturesque manner. They form the boundary in front of a fine bay, walled in to the right by a noble rocky cliff; and in the middle of it a sweet little woody island. Over the low part of the promontory the distant hills are seen finely. The shore to the left, here, appears peculiarly beautiful, for half a dozen inclosures of the most elegant verdure rise from the water's edge among sloping woods, and offer a variety of colours of the most picturesque hues. From hence likewise you look back on *Bannerig*, a fine cultivated hill, rising from the lake in a most pleasing manner.

Moving from this end of the island along the west coast of it, the view is extremely picturesque. The streight is broke by three islands, two of them thickly covered with wood, the other a long slip, scattered with tall upright trees, through the stems of which, and under the thick shade of their spreading tops, the water is seen glittering with the sun beams; a landscape truly delicious.

From the north end of this isle, so happy in the beauties of prospect, the views are various, and some of them exquisite. Looking towards the south, you command a prodigious fine view of the lake, spreading to the right and left behind promontories, one beyond another, in a gloriously irregular sheet of water, encircled by an amphitheatre of hills, in the noblest stile. To the north you look upon another sheet, different from the first. It is broke by a cluster of four small but beautiful islands.

Full in front you look upon a noble sweep of mountains, and on one, in particular, that is very curious. It is of a circular form, rising out of a vast hollow among the rest, and is overtopped by them; romantic in the highest degree. A little to the right of it, you command one of the most noble of cultivated hills. It is intersected by hedges, trees, and scattered woods, into a vast sweep of inclosures, which reach the very top. A view beautifully magnificent. More to the right, the eye is delighted with the most elegant waves of cultivated inclosures that can be conceived, rising to the view in the most picturesque varieties of landscape, and forcing admiration from the most tasteless of mortals. To the left, a vast range of rocks and mountains form the boundary of the lake, and project into it in the boldest manner.

Sailing from this noble island to that of *Berkshire*, a little hilly wood of scattered trees, the views are va-

rious, rich, and truly picturesque. From the north side of it you look upon a fine sheet of water, to the Great Island, &c. and bounded by a noble variety of shore. To the left, and in front, high ridges of hills and mountains. To the right, most beautiful waving hills of inclosures; some just rising enough to shew their hedges distinctly, and others hanging full to the eye; beneath, a boundary of rough hills, and wild, uncultivated ground. To the left, you see Crow island, which appears fine; and the ferry-house, beneath a clump of trees, on the point of a promontory, jetting into the water, with an effect really exquisite. To the east, you look against a very fine bank of inclosures, most elegantly scattered with trees. To the south, the lake is lost between two promontories, projecting into it against each other, and leaving a fine strait between. One is high and rocky; the other, a line of waving wood and inclosures, and catch beyond it the distant hills, which complete the view. The western prospect is on to a range of craggy hills; some most beautifully fringed with hanging woods, and cut in the middle by a cultivated wave of inclosures, broken by woods, hedges, clumps, and scattered trees, and rising one above another, in the most picturesque irregularity that fancy can suppose. At the top, a farm-house, under a clump of trees; the whole forming a bird's eye landscape of the most delicious kind. Nor can any thing be finer than the hanging woods on this side of the lake, broken by grass inclosures of a beautiful verdure.

Sailing across the lake from Berkshire to the shore under these inclosures, which are called Round Table, nothing in nature can be more exquisite than the view, as you move, of a fine, long, grass inclosure, at the water's edge, on the opposite shore, bounded by fine woods, except to the lake, edged with some spreading trees, through which the view of the grass is truly picturesque. Other waving slopes of inclosures, to the right, hang to the lake, under the shade of a rough, wild hill, and down to a skirting of wood, on the water's edge, in the finest manner. Behind, the rocky cliff of Fournefs Fells, has a noble appearance, crowned with a sweep of wood.

Sailing under the western shore, you command most beautiful landscapes on the opposite one, consisting of the finest banks of cultivated inclosures, scattered with trees, clumps of wood, farm houses, &c. and hanging to the water's edge in the most charming variety of situation; the fields in some places dipping in the very lake, in others thick woods rising from the water; scenes which call for the pencil of a genius to catch graces from nature beyond the reach of the most elaborate art.

Coming to Ling Holm, a small rocky island, with a few trees on it, you have a double view of the two shores, finely contrasted, the western spread with noble hanging woods, and the eastern one cultivated hills, waving to the eye in the finest inequalities of surface. The distant hills are also seen in a bold stile over the low inclosures of Rawlinson's Nab, a promontory to the south.

Landing on the point of that promontory the view is very noble, it commands two glorious sheets of water, north and south, each of four or five miles in length. That to the south is bounded in general by rough woody hills, broken in a few spots by little inclosures. In front of the promontory, several very beautiful ones, cut by irregular sweeps of wood, and hanging to the water's edge in the finest manner; the whole crowned with craggy tops of hills.

But the view to the north is much the most beautiful. Berkshire island breaks the sheet of water in one place, and adds to the picturesque variety of the scene without injuring its noble simplicity. Common Nab, a promontory from the east shore, projects into it in another place, elegantly variegated with wood and inclosures, waving over sloping hills, and crowned with rough uncultivated ground. One inclosure in particular breaks into the wood in the most picturesque manner imaginable. This end of the lake is bounded by the noble hills of cultivated inclosures, already mentioned, which

are viewed from hence to much advantage; they rise from the shore with great magnificence. To the left a ridge of hanging woods, spread over wild romantic ground, that breaks into bold projections, abrupt and spirited, contrasting the elegance of the opposite beautiful shore in the finest manner.

But the most beautiful view of this lovely scene is from the side of a large ridge of hills that form the eastern boundaries of the lake, the situation being high enough to look down upon all the objects. A circumstance of great importance, and which painting cannot imitate. In landscapes, you are either on a level with the objects, or look up to them; the painter cannot give the declivity at your feet, which lessens the objects as much in the perpendicular line as in his horizontal one.

You look down upon a noble winding valley of about twelve miles long, every where inclosed with grounds which rise in a very bold and various manner; in some places bulging into mountains, abrupt, wild, and uncultivated; in others, breaking into rocks, craggy, pointed, and irregular. Here, rising into hills covered with the noblest woods, presenting a gloomy brownness of shade, almost from the clouds to the reflection of the trees in the limpid water they so beautifully skirt. There, waving in glorious slopes of cultivated inclosures, adorned in the sweetest manner with every object that can give variety to art, or elegance to nature; trees, woods, villages, houses, farms, scattered with picturesque confusion, and waving to the eye in the most romantic landscapes that nature can exhibit.

This valley, so beautifully inclosed, is floated by the lake, which spreads forth to the right and left in one vast but irregular expanse of transparent water. A more noble object can hardly be imagined. Its immediate shore is traced in every variety of line that fancy can imagine, sometimes contracting the lake into the appearance of a noble winding river; at others retiring from it, and opening large swelling bays, as if for navies to anchor in; promontories spread with woods, or scattered with trees and inclosures, projecting into the water in the most picturesque stile imaginable: rocky points breaking the shore, and rearing their bold heads above the water. In a word, a variety that amazes the beholder.

But what finishes the scene with an elegance too delicious to be imagined, is, this beautiful sheet of water being dotted with no less than ten islands, distinctly commanded by the eye; all of the most bewitching beauty. The large one presents a waving various line, which rises from the water in the most picturesque inequalities of surface: high land in one place, low in another; clumps of trees in this spot, scattered ones in that; adorned by a farm-house on the water's edge, and backed with a little wood, vying in simple elegance with Baromean palaces. Some of the smaller isles rising from the lake like little hills of wood, some only scattered with trees, and others of grass of the finest verdure; a more beautiful variety no where to be seen.

Strain your imagination to command the idea of so noble an expanse of water thus gloriously environed; spotted with islands more beautiful than would have issued from the pencil of the happiest painter. Picture the mountains rearing their majestic heads with native sublimity; the vast rocks boldly projecting their terrible craggy points. And in the path of beauty, the variegated inclosures of the most charming verdure, hanging to the eye in every picturesque form that can grace a landscape, with the most exquisite touches of *la belle nature*. If you raise your fancy to something infinitely beyond this assemblage of rural elegancies, you may have a faint notion of the unexampled beauties of this ravishing landscape.

After viewing this beautiful lake, we proceeded to Kirby Lonsdale, that is, the church or kirk in the dale of the river Lone, it standing in a vale by the river Lone, two hundred and thirty-two miles from London. It is a large, well built town, has a handsome church, and a good stone bridge over the river. It is well inhabited, and is the best town in the county, except

Kendal.

Kendal. Here was an hospital of lepers, dedicated to St. Leonard, as early as the reign of king Henry II. but at the time of the dissolution, its revenues were valued at no more than eleven pounds, four shillings and three-pence, a year.

It has a manufacture of woollen cloth, a weekly market on Tuesdays, and two annual fairs, viz. one on Holy Thursday, for horned cattle; and the other on the twenty-first of December, for wollen cloth.

At Wellington, near Kirby Lonsdale, is a bridge over the river Lune, which, for its antiquity and curious workmanship, exceeds any in the north of England. It consists of three semicircular arches, and is, by some, supposed to be a work of the Romans, but others think it of later date. It is entirely built of a fine free stone, truly squared, the stones almost all of a size, and the joints are so firm and even, that they are hardly to be discovered. The arches are all turned with mouldings at the edges, and the whole design has been executed with the utmost exactness, both for strength and beauty. The water under the middle arch is fifteen feet in summer, when the river is very low, and in winter it is almost twice as deep, and vastly rapid.

We next visited Burton, situated in a valley near the borders of Lancashire, and not far from Farlton-knot-hill, two hundred and forty-four miles from London. It is a thoroughfare town, on the road from Lancaster to Carlisle; but contains nothing worthy of observation. It is about a quarter of a mile in length, and has a small weekly market on Tuesdays; but no annual fair.

Four miles to the north of Burton, is Milthorp, a village seated about a mile and a half to the west of the road to Kendal, upon an arm of the sea, near the mouth of the river Ken. Commodities are brought hither in small vessels from Lancashire; and here is an annual fair, held on the twelfth of May, for horned cattle, horses, and sheep.

Curious PLANTS found in Westmoreland.

Small moss maiden-hair, with leaves divided into two or three segments. *Adiantum petraeum perpusillum Anglicum foliis bifidis vel trifidis*. Found on Buzzard rough crag, near Wrenofe.

Broad leaved mountain garlick, with purple flowers. *Allium sylvestre amphicarpon foliis porraceis, floribus & nucleis purpureis*. An allium seu moly montanum primum, Cluf. In Troutbeck-holm, by Great Strickland.

Small bistort, or snakeweed, *Bistorta minor nostras*, Park. In several places of this county, as at Crosby Ravensworth.

Eye-bright cow-wheat, with short blunt leaves, *Crataegonon foliis brevibus obtusis Westmorlandicum* Near Orton, by the side of a rivulet, running by the way that leads thence to Crosby.

Birds cherry, *Cerasus avium sive padus Theophrasti*. Common among the mountains.

The least wild heart cherry-tree, vulgarly called the merry-tree. *Cerasus sylvestris fructu minimo cordiformi*, P. B. About Rosgill.

Hoary dwarf mountain cistus, or holy-rose, with cats-foot leaves, *Chamaecistus seu helianthemum folio phiosellae minoris Fuchsii*, J. B. On some rocks near Kendal.

Dwarf vernal gentian, *Gentianella fugax verna seu praecox*. On the back side of Helte-tell-nab, near Kendal, as also in the parks on the other side of Kendal, on the back of Birkhog. It begins to flower in April, and continues to flower till June.

Crow-foot cranesbill, with a party-coloured flower. *Geranium batrachoides flore eleganter variegato*. In Old Deer-park, by Thornthwait. This, though it may be but an accidental variety, yet is so ornamental to a garden, that it deserves to be taken notice of.

Mountain crow-foot cranesbill, *Geranium batrachoides montanum nostras*. In the hedges, and among the bushes in the mountainous meadows and pastures of this county.

Stone fern, with slender brittle stalks and finely cut leaves. *Filix saxatilis caule tenui fragili*. *Adiantum album folio filicis*, J. B. On old stone walls and rocks, plentifully.

Small flowering stone-fern. *Filicula petraea crispata seu adiantum album floridum perelegans*. At the bottom of stone walls made up with earth in Orton parish, and other places, plentifully.

The lesser branched fern. *Filix ramosa minor*, J. B. On the sides of the mountains, in shady places, especially.

Water gladiole. *Leucoium palustre flore subcoeruleo*, C. B. In a pool called Huls-water, and in Winander-mere, plentifully.

Grass upon grass. *Gramen sparteum spica foliacea graminea majus*, P. B. In an isle called Householm, in Huls-water.

The lesser white flowered bastard hellebore. *Helleborine minor flore albo*, Park. In Sir John Lowther's wood, directly against Askham-hall.

The smoother broad-leaved bushy hawkweed. *Hieracium fruticosum latifolium glabrum*, Park. Near a lake called Huls-water.

Round-leaved rough hawkweed, with a long stalk, *Hieracium macrocaulon hirsutum folio rotundiore*, D. Lawson. By Bucbarrow-well, in long Sledale.

Small rush, with its shaft produced to a great length above its compact panicle, *Juncus parvus calamo seu scapo supra paniculam compactam longius producto Newtoni*. Not far from Amblefide.

Mountain dwarf juniper, called by the country people favine, as well here as in Wales. *Juniperus Alpina*, J. B. Clus. Park. Upon the tops of the mountains.

Narrow leaved lilly-convally, *Lilium convallium angustifolium*, D. Lawson. By Water-fall bridge, and elsewhere in this county.

Common spignell, or me. *Meum*, Ger. *vulgatius*, Park. *foliis anethi*, C. B. About two miles from Sedberg, in the way to Orton, abundantly in the meadows and pastures, where it is known to all the country people by the name of bald-money, or (as they pronounce it) bawd-money.

Round-leaved mountain-forrel, *Oxalis seu acetosa rotundifolia repens Eboracensis folio in medio deliquium patiente*, Morif. Hist. In Long Sledale, near Bucbarrow-well, and all along the rivulet that runs by the well, for a mile or more. This never degenerates into the common Roman or French forrel.

Codded arsmart, quick in hand, touch me not, *Noli me tangere, sive perscaria siliquosa*, Park. On the banks of Winander-mere, near Amblefide, and in many other places, plentifully.

Cross-wort madder. *Rubia erecta quadrifolia*, J. B. Near Orton, Winander-mere, and elsewhere, plentifully.

Bay-leaved sweet willow, *Salix folio laureo sive lato glabro odorato*, P. B. Frequent by the river sides, in the meadows among the mountains.

Cinque-foil ladies mantle, *Tormentilla argentea*, Park, *Alpina folio sericeo*. On the rocks by the side of the lake called Ulles-water.

The great bilberry bush. *Vitis idaea magna sive myrtillus grandis*, J. B. In the forest of Whinfield.

Hares-tail-rush, or moss-crops, *Gramen juncoides lanatum alterum Danicum*, Park. On mosses and boggy places.

MEMBERS of PARLIAMENT for this County.

Westmoreland sends four members to parliament; two knights of the shire for the county, and burgessees for the borough of Appleby.

T H E

P R I N C I P A L I T Y

O F

W A L E S.

At what time Wales was first divided into counties, is not certainly known; Caermarthenshire, Glamorganshire, Pembrokeshire, Cardiganshire, Flintshire, Caernarvonshire, Anglesea, and Merionythshire, seem to have been of antient date in the time of Edward I. to these eight, Radnorshire, Brecknockshire, Montgomeryshire, and Denbighshire, were added by act of parliament in the reign of Edward VIII.

The first division of Wales upon record, was about the year 870, when Roderick, king of Wales, divided it among three sons, into three districts, which were called kingdoms, and distinguished by the names of South Wales, Powis Land, and North Wales. This division gave rise to many wars, in which the kingdom of Powis Land was portioned among the conquerors, and annexed partly to South Wales, and partly to North Wales; divisions which subsist even to this day. South Wales, containing Cardiganshire, Pembrokeshire, Caermarthenshire, Glamorganshire, Brecknockshire, and Radnorshire; and North Wales, containing Flintshire, Caernarvonshire, Montgomeryshire, Merionythshire, Denbighshire, and the county of Anglesea.

In the time of the Saxons, that form of government was established, which, with some circumstantial variations, has continued ever since.

During the heptarchy there was in each of the seven kingdoms a council that assisted the sovereign; and there was also on particular occasions, a general council, consisting of representatives, deputed by the particular councils to assist in such affairs of government as concerned the whole heptarchy, considered as a common interest. These councils, or assemblies, called wetenagemot, are supposed to have been the foundation of British parliaments; but it has never yet been clearly determined, whether in these wetenagemots the commons had repre-

sentatives, whether the legislative power was in the person of the king, in the general council, or in both together; or whether the king had a right to levy taxes by his own authority; but it seems to be generally agreed, that some members of the wetenagemot, whether it consisted of lords only, or of lords and commons, were ecclesiastic, and that its determinations extended to ecclesiastical matters.

To our Saxon ancestors we also owe the inestimable privilege, which the commons of England enjoy, of being tried by a jury, twelve men sworn to determine justly according to evidence, whether the party accused is guilty or not guilty of the fact charged against him; when this question is determined, the judge pronounces such sentence upon the offender as the law prescribes. It seems therefore to be not only impertinent, but highly injurious, for those who are employed to plead against a prisoner in criminal prosecutions, to declaim in a long and laboured harangue, on the heinousness of the offence supposed to have been committed, and to enumerate every minute and suppositious circumstance by which it is possible to accumulate aggravation; it is impertinent, because if the crime is capital, the judge has no discretionary power, either to mitigate or increase the punishment, whether the offence is simple or complicated, or whether it was committed with circumstances that extenuate or aggravate the guilt; it is injurious because it inflames the minds of the jury, and makes them impatient to punish the offence before it has been proved, and consequently liable to punish it, when the proof is insufficient.

After the Norman conquest many alterations were made from time to time in the form of government, and the manner in which it was administered.

Wales continued to be governed by its own princes and laws till the year 1282, when Llewellyn ap Gryffith, prince of that country, lost both his life and principality to king Edward I. who created his own son prince of Wales;

Wales; and ever since the eldest sons of the kings of England have been commonly created prince of Wales.

Of the ancient INHABITANTS.

The character of the ancient inhabitants of this country is given us in very unfavourable terms, by many historians. The English in those times were almost always in a state of war with this people, and were biased by their interest and passions to represent them in the most odious colours. Giraldus Cambrensis, whose connections and descent might have prejudiced him in favour of this country, failed not to pay court to Henry II. by traducing the Welsh. What is still more extraordinary, the accurate and ingenious lord Lyttleton, has implicitly adopted the character given of them by the false and infamous Giraldus. They are represented by these historians, as having no kind idea of chastity. Promiscuous concubinage, they say, was in a manner allowed, and no stigma fixed upon it. If my lord Lyttleton had consulted Howel Dha's code, he would there have seen how highly they disapproved of even the appearances of an unlawful commerce between the sexes. It was even lawful if a man betrothed a woman, who did not prove to be a virgin, he was at liberty to repudiate her. Thus we see how cautiously the Welsh laws guarded the morals of the women, and how unjustly they were accused by Giraldus, and those that have asserted the same on his authority. The manners of every uncivilized nation are in some degree similar. Sixteen hundred years ago, the inhabitants of Wales were nearly in the same state of civilization, as the American savages are at this day. We are told of Joseph of Arimethea's coming to Britain to plant the gospel. This depends upon the authority of the monkish historians, who scarce contain a word of truth or probability. But it is allowed that some kind of christianity was planted very early in Britain, before the coming of the Saxons. Long after the Saxons came over they continued Pagans; whilst the Britons, according to these historians, enjoyed the light of the gospel. Before these Britons were converted to christianity, one would think it was necessary to convert them from savages to men. From accounts given, their conversion to christianity meant no more than their being baptised, without so much as the imparting of any kind of faith or knowledge. This is precisely the case with the modern missionaries, who send accounts of the conversion of thousands, who have only been ceremoniously baptised, without christian instruction.

In the time of Henry II. the inhabitants of Wales were so deplorably dark, that they could not with the least propriety be called christians, and many of them even professed pagans. The Don-Quixot archbishop, with his Sancho-Pancha, Giraldus, went upon an expedition to convert these Heathens. The archbishop preached to the poor Welsh in Latin, they were baptised, kissed the cross, and so the mission ended, to their no small edification.

So late as the reign of Elizabeth, if we may believe Penry, there were but two or three that could preach in the whole principality of Wales. Some of late years have greatly promoted the cause of religion, by the translation of pious books into that language, and distributing them among the poor. There is still great room for improvement, as they are not only in want, but desirous of religious knowledge.

In former times, the inhabitants of Wales were described to be a nation of soldiers. Every man being obliged to take up arms, in times of distress. Thus, though a small country, they could bring large armies to the field. They used very light armour, as they carried on the war by incursions, and forced marches; and conquered their enemies rather by surprise, than strength or courage.

They had only a small target to defend their breast, and used the javelin as a weapon of offence. Thus armed, and thus defended, they were no way equal to the English in a pitched battle, who fought with heavy armour, helmets and targets, and armed at all points.

They always fought on foot. Like all undisciplined soldiers, they made one furious onset, which if resisted, they were immediately put in confusion, and could not be rallied. They fled to the mountains, where they waited for another opportunity to fall upon their enemies.

They despised trade and mechanical arts, as they in general do to this day. Though they had no money among them, yet there were no beggars in the country for they were all poor. They are described to have been impetuous in their disposition, fickle, revengeful, and bloody. But let it be remembered, that this character is given them by their enemies.

Their superstition was excessive. They paid the greatest veneration to their priests, and looked upon them and their habitations as sacred.

The marches of Wales comprehended the greatest part of the counties of Chester, Salop, Hereford, and Worcester. They were claimed both by the Saxons and the Britons; and possessed by either, as the fortune of war prevailed. They were the scenes of continual wars and devastation. It was the wise policy of the times to give large estates to men of distinguished valour, to preserve the frontier counties from rapine and violence, who were called lords-marchers. They had great numbers of men under their command, who swore fealty to them, and were under their direction upon all occasions. Their power was so great, that they might rather be considered as petty princes than subjects.

In the time of king Offa, the Welsh lost the greatest part of the marches; and that prince, either with a view of preventing their incursions, or marking the boundaries of their country, threw up a dyke, which still remains in many places.

Having premised these few observations relating to the country and ancient inhabitants of Wales, in general, we shall now proceed to describe the several counties in the manner we passed through them in our tour.

F L I N T S H I R E.

FLINTSHIRE is a county of North Wales, and derives its name from Flint, the county-town. It is bounded by an arm of the Irish sea, which forms the great æstuary of the river Dee on the north; by part of Denbighshire on the south; by Cheshire on the east; by Shropshire on the south; and by another part of Denbighshire and the Irish sea on the west. Of all the counties in Wales this is the least, extending in breadth about eight miles only, in length about thirty-three, and about seventy in circumference. It is divided into five hundreds, and twenty-eight parishes; in which are included one city, three market towns, four castles, and two parks; about eight thousand houses, and thirty-two thousand inhabitants. It lies in the province of Canterbury, and partly in the diocese of St. Asaph, and partly in that of Chester. Holy-well, a market-town near the center of it, is about two hundred miles north-west of London.

R I V E R S.

The principal rivers with which this county is watered, are the Dee, the Wheeler, the Alen, the Clwyd, and the Sevon. The Dee we have already described among the rivers of Cheshire. The Wheeler rises near Caerwys, and running westward falls into the Clwyd, almost opposite to Denbigh. The Alen rises some miles south of Ruthin in Denbighshire, and running first a few miles north, afterwards directs its course eastward, and falls into the Dee, north of Wrexham, in Denbighshire. The course of the Clwyd will be mentioned among the rivers of Denbighshire. The Sevon rises on the north side of Caerwys, and running to the westward, falls into the Clwyd, a few miles north-west of the city of St. Asaph.

REMARKS on the INLAND NAVIGATION of Flintshire.

The inland navigation of this county is very trifling; that of the river Dee, which waters the north-west corner of it, has been already described in our survey of Cheshire. By this river small vessels pass up to Flint. The mouth of the river Clyde is also navigable to some distance above St. Asaph. But no attempt has ever been made to render either of the rivers navigable by art. Indeed there are no towns of sufficient importance to defray the expences attending all works of that kind.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of this county is healthy and pleasant; but rendered extremely cold by the north winds, to which it is almost wholly exposed. The land not being so mountainous as in most of the other counties, is more fruitful; for the hills are not very high, and fall gently into fertile plains. Hence this county yields some wheat, and great plenty of barley, oats and rye, while the valleys afford pasture for black cattle, which, though very small, are excellent beef. There are likewise fed some sheep, and but few goats. Great quantities of butter and cheese are made in this county, which likewise produces much honey, from which the liquor called metheglin is made, and frequently drank in this and the neighbouring counties. Flintshire also abounds with all sorts of fish and fowl. It has great plenty of pit-coal, and the hills of this county yield mill-stones, and lead-ore, in great abundance. In sinking some new coal-pits at Leefwood, in the parish of Mold, near the river

Alen, was discovered a flat sort of slate, upon which are frequently found the leaves of several plants, delineated with as great exactness as an impression of them, in plaster of Paris or clay.

REMARKS on the HUSBANDRY of Flintshire.

Some parts of Flintshire, particularly the valleys, are very fruitful, and well cultivated. In many places they have adopted several improvements lately made in husbandry; by which means the face of the valleys, especially that of Clwyd, which exhibits as beautiful an appearance as almost any spot in England. The mountains feed large flocks of sheep; but many of them would, by proper cultivation, yield large crops of corn. Many of the valleys are greatly enriched by the soil washed from the neighbouring mountains during violent rains, and many of the farmers, especially those who have adopted the English husbandry, well know the value of such land, and improve it accordingly. They plough three times for wheat and barley, and receive about fourteen bushels in return for one sown on these fertile lands.

CITY and MARKET TOWNS.

The city is St. Asaph, and the market towns are Caerwys, Flint, and Holywell.

We entered this county from Chester, by crossing the river Dee, and directed our course towards Flint, but in our way stopped at Hanarden, a village where there is a castle, called by the Britons, Penar Lâk, or Pennard-halawg, vulgarly Pennard y Las. It is situated south of Flint, on the eastern limits of the county, five miles from Chester, near the banks of the Dee. Who was the first founder of this castle is uncertain. It was held by seneschalship of the earls of Chester, and was the seat of the barons of Mount-halt, or de Monte Alto, who were stewards of the Palatinate of Chester, and took their title from Mold, an abbreviation of Mont-hault, in this neighbourhood. Robert, the last baron of this family, for want of issue male, made it over to queen Isabella, wife to king Edward II. and the possession was afterwards transferred to the Stanley's, earls of Derby. It remained entire till about the year 1680; but at present there are only the ruins of the walls. One part of them is upon a hill, and on them is erected a small structure, which appears to have no other meaning in it than for viewing the adjacent country. They are now in the possession of Sir John Glynne, Bart. the gardens of whose seat are adjoining thereto.

At this village is held three annual fairs, viz. May the eighth, October the first, and December the twenty-fourth, all for cattle.

Before we prosecute our tour to Flint, it will not be amiss to describe some places situated near the river Alen, as they are often mentioned in history.

About four miles south of Hawarden, is a village called Caergwrely, near which is Hope-castle, situated on the Alen, in the parish of Eastyn, otherwise called Queen Hope. King Edward I. in his grant made in the tenth year of his reign to John earl of Warren and Surrey, of the lordships of Bromfield and Yal, excepts out of it the castle and land of Hope, reserving them to himself and his heirs, which before was part of Bromfield; which Griffith and Llewellyn, sons of Madoc, held at the beginning of the war, either by themselves or their guardians. Into this castle the above king re-
tired

tired when the Welsh had surpris'd his army. It is at present in the possession of the earl of Derby.

Caergwrely has four annual fairs, viz. Shrove Tuesday, May the sixteenth, August the twelfth, and October the twenty-seventh, for cattle.

Near the above castle mill-stones are hewn out of the rock, and at a small distance a gardener digging about the beginning of the last century, discovered a Roman hypocaust, or hot bath, hewn out of a solid rock. It was floored with brick, set in mortar, and roofed with polished tiles, which in many places were perforated. This roof was supported by pillars of brick and furnished with tubes of the same materials for carrying off the force of the heat. This hypocaust was about eighteen feet in length, in breadth about fourteen, and in height about two; and by an inscription upon some of the tiles, it appears to have been built by the twentieth legion, which was stiled *Victrix*, and lay in a garrison at Chester, near this place.

Near the river Alen, in a narrow place beset with woods, lies Colehall, called by Giraldu, *Collis Carbonarius*, or a Colehill. Where when king Henry II. had made the most diligent preparations, in order to give the Welsh battle; the English, by reason of their disorderly approaches were defeated, and the kings standard forsaken by Henry of Essex, who by right of inheritance was standard bearer to the kings of England. Whereupon being charged with high treason and overcome by his adversary in a duel, and his estate forfeited to the crown, he was so much ashamed of his cowardice that he put on a hood and retired into a monastery.

At Caergile, in this county, about six miles from Hawarden, is a spring of remarkable clear water, which turns white with oil of tartar, becomes green with syrup of violets, and red with logwood. A gallon will yield two hundred and twenty grains of sediment, of which fifty-six are earth, and one hundred and fifty-four are sea-salt and lime-stone. It appears to be impregnated with calcareous nitre, and sea-salt; and the quantity of three pints or two quarts at most will purge sufficiently. A woman who was afflicted with a violent scurf all over her body, was entirely cured of it by drinking three pints of this water every day. Several children have likewise been cured of the leprosy, and other scorbutic disorders by drinking of, and bathing in this water.

In a small part of this county, to the east of the river Dee, and in a manner wholly divided from the rest, and called the English Maelor, is a village named Bangor, fourteen miles south-east of Hawarden. It was called by writers *Bangor Monachorum*, from a famous monastery, said to be as old as the time of the British king Lucius. The writers of ecclesiastical history say, that the great monastery here produced a man, who, as he is reputed by some, though others look upon him to have been a very learned, ingenious and pious man. Gildar, also one of our most ancient English writers, was a monk in this abbey, and abbot in the year 600. This monastery, it is affirmed, was supplied with learned men, at the coming of St. Augustine into England. It stood in a valley, as Leland informs us, yet had a circumference like a walled town, with two gates, half a mile distant from each other. Bede acquaints us, that the number of monks in this monastery was so great, that when divided into seven parts, every part consisted of at least three hundred men. We have no account of the founder handed down to us, or of its revenues; but the last no doubt were very great. It was destroyed soon after Augustine came into England, because the monks refused to submit to his Romish ceremonies. However, at his instigation, Ethelfred invaded the Britons in Wales, who, coming against that prince, took the monks with them to pray for their success: but Ethelfred being conqueror, killed above one thousand two hundred of them, naked and unarmed as they were. After this the monastery went so to decay, that William of Malmesbury, who lived soon after the conquest, affirms, there was nothing here, in his time, but the ruins of churches, walls and gates, together with heaps of rubbish.

In this district there are about four or five parishes; the principal is that of Hanmer, which extends about four miles in length, and near the same in breadth, and is divided into six townships. In this parish the face of the country is generally level, and the soil in some parts a deep clay, and in others dry and sandy. The land is manured with lime and marle, and produces wheat, barley, oats, peas, and beans, and considerable quantities of cheese are made there. The inhabitants burn coal and turf, and the latter is dug up here in great abundance. The church, which is in the diocese of Chester, is dedicated to St. Chad, bishop of Litchfield. It consists of a nave, a chancel, and two side isles. At the west end is a tower, with a clock and four bells, and there is no chapel of ease in the parish. The principal seats is Hanmer-hall and Redhall, both belonging to the family of the Hanmers. On the west side of the church is a school, endowed with about twelve pounds, *per annum*, where the poor children of the parish are taught gratis.

Having remarked every thing which merited our observation in our way to Flint, we now proceed to a description of that town. It is a small place, commodiously situated on the æstuary of the river Dee, where it has a trifling harbour, one hundred and ninety-four miles from London, and is governed by a mayor and burgessees.

Here is a castle begun by king Henry II. and finished by king Edward I. king Richard II. on his return from Ireland, was for some time entertained here; but on his departure, was taken prisoner by Henry Bolingbroke, duke of Lancaster, and not long after put to death. Formerly vessels coming up the wide mouth of the river Dee, anchored under the walls of this castle. There have been, within the memory of man, rings in the walls to which ships used to be fastened. The castle now belongs to the crown, but is in a very ruinous condition. It is used at present as the county gaol; the assizes are likewise annually held here; and the mayor is stiled governor of the castle.

This town sends one member to parliament, and has four annual fairs, viz. on February the fourteenth, June the twenty-fourth, August the tenth, and November the thirtieth for cattle.

From Flint we proceeded to Holy-Well, or as it is called in the British language, *Tre-fynnon*, that is, the town of the well, situated on the side of a hill, about two hundred miles from London. It is a remarkable neat well-built town, consisting principally of one long street, in which there are not only several good inns, but many genteel houses. It took its name from a celebrated spring, which, according to the Popish legends, it is said rose miraculously from the blood of St. Winefrid, a Christian virgin, who was ravished and beheaded in this place by a pagan tyrant. The water breaks out from a rock of free-stone with such a rapid stream, as, within a small distance, is able to turn several mills. Over the head of it, was built a chapel, dedicated to St. Winefrid, by the monks of Basingwerk, a place in the neighbourhood. In a window of the chancel was formerly to be seen St. Winefrid's story, and her pretended restoration to life, by St. Beuno, painted on the glass windows of the chancel. The present structure was erected in the time of king Henry VII. and consists of very neat workmanship. The front is composed of a kind of small pediment, supported by slender stone-pillars, under which the water flows, and on the inside are several crutches, left as monuments by those who received the use of their limbs by this water. The rapidity of the stream, and the great quantity of water it discharges, have caused some persons to suspect that it is a subterraneous rivulet, which the miners might have turned to that channel; it being their common practice, when they meet with currents under ground, to divert them to some swallow. And this is confirmed from an observation, that after much rain, the water often appears muddy; and sometimes of a bluish colour, as if it had washed some lead mine, or proceeded from tobacco-pipe.

Varis, which Antoninus places nineteen miles from Canovium. This he thinks is farther confirmed by its being now called Bod Vari, which signifies the mansion of Varus; and there are the ruins of a city on a small hill adjoining, called Mael y gaer, that is, the city hill: but the annotator, though he does not deny that Varis may be seated at Bod-Vari, yet he thinks Mael y gaer is but a slender confirmation of it. However, it is certain, that place receives its name from the fortifications or entrenchments that are yet to be seen there; for the word Gaer or Caer, signifies strictly only a wall, fortress, or enclosure. This being prefixed to the name of Roman towns, because they were fortified, has occasioned many to suppose the genuine signification thereof to be town or city. This fortification is exactly round, and one hundred and sixty paces in diameter; all round it

the earth is raised in the manner of a parapet; and almost opposite to the avenue, there is a kind of tumulus, or artificial mount.

At this Moel y gaer Howel Gwynedh, who sided with Owen Glindower, against Henry IV. was beheaded. He was one who, for a long time, annoyed the English in his neighbourhood; but being at length taken by his enemies of the town of Flint and beheaded at this place, his estate was disposed of to one Saxton.

MEMBERS of PARLIAMENT for Flintshire.

This county sends two members to parliament; one knight of the shire for the county, and one burges for the borough of Flint.

DENBIGHSHIRE.

THIS county, which derives its name from Denbigh, the county town, and is in the British language called Sir Dhinbeck, is bounded on the north by the Irish sea, and part of Flintshire; on the south by Montgomeryshire, on the east by Cheshire and Shropshire; and on the west by Caernarvonshire and Merionethshire. It extends in length from north-west to south-east about forty miles; from north to south about twenty miles; and is about one hundred and eighteen miles in circumference. It is divided into twelve hundreds, in which are four market-towns, fifty-seven parishes, about six thousand four hundred houses, and thirty-eight thousand inhabitants. It lies in the province of Canterbury, partly in the diocese of Bangor, and partly in that of St. Asaph. Denbigh, the county-town, is two hundred and nine miles north-west from London.

This county, in the time of the Romans, was part of the country of the Ordovices; and some Britons, who were forced out of Scotland, are said, in their turn, to have driven the Saxons hence, and, by the assistance of the Welsh, to have possessed themselves of all this district, from the river Conway to the Dee.

RIVERS.

The principal rivers are Llwyd, which rises at the bottom of an hill south-west of Buthin, whence running north-east, and passing that town, it directs its course nearly north-west by the city of St. Asaph, in Flintshire, and falls into the Irish sea, a few miles north-west of that city. The Elwy, which rises in the south-west part of the county, runs north and north-east, and falls into the Llwyd, near St. Asaph. The Dee, which rises near Bala, in Merionethshire, runs north-east through Denbighshire into Cheshire, as may be seen in the description of that county; and the Conway, which separates Denbighshire from Caernarvonshire. The less considerable streams, are the Alwen, the Aled, the Llawedok, the Neag, and the Gyrow.

REMARKS on the INLAND NAVIGATION of Denbighshire.

Neither of the rivers of this county are navigable, though part of the northern boundary is the sea. Nor

is there any harbour, except for boats, on the whole coast. There is however a very considerable bay, where ships bound to Liverpool and Chester often come to an anchor in southerly and south-east winds. There is from five to ten fathom water, and the bottom an oozy sand. A north-west wind blows right into the bay, where there is no riding in safety here, if it blows hard.

AIR AND SOIL.

The air of this county is esteemed healthy, but it is rendered sharp and piercing by a vast chain of mountains, which almost surrounds the county, and the top of which, for the much greater part of the year, is covered with snow. The soil is various and almost in the extremes of good and bad. The western part is heathy, barren, and but thinly inhabited, except the sea coast and the bank of the Conway. The hills upon the eastern borders of the county, look, at a certain distance, like the battlements or turrets of castles: and this part is as barren as the west, except where it borders on the river Dee. The middle part of the county, however, consisting of a flat country seventeen miles long from north to south, and about five miles broad, is one of the most delightful spots in Europe. It is extremely fruitful and well inhabited, surrounded by high hills, except upon the north, where it lies open to the sea; and is called the Vale of Clwyd, from its being watered by the river of that name.

The inhabitants of this county are in general long lived, and those of the vale of Clwyd remarkable for their vivacity and spirit. The English manners and customs are pretty much adopted; especially by the inhabitants of the vale country, who seem to be in general of Saxon and Norman extraction, as appears by those names being common in that country. Great part of Flintshire was very early in the possession of the English; and Denbigh-land, in the vale of Clwyd, was likewise colonized by some of the first princes of the Norman line.

The inhabitants of the mountainous country still retain the ancient British language and customs, unadulterated with any foreign tongue. So great is the difference between the inhabitants of the mountains and the vales, that they would be taken to be natives of different

different countries and climates. Different not only in their manners and customs, but even in their very complexion and persons.

REMARKS on the HUSBANDRY of Denbighshire.

The soil in the western part of this country is somewhat barren, but thinly inhabited, and full of heaths, and craggy, bare hills; the middle, where there is the spacious vale of Clwyd, is very fruitful; but the eastern parts are not so fertile, except where watered by the river Dee. The husbandmen, however, have been long endeavouring, with good success, to improve even the western parts, by parcing off the earth with a broad instrument, into thin clods and turfs, which they pile up in heaps, then burn to ashes, and afterwards scatter them upon the land, and thereby produce such quantities of rye, as is almost incredible.

This operation is performed in the following manner: When the turfy surface is taken with, what is usually called a denbighing plough, they are piled up in heaps about the size of grass-cocks, and placed in quincunx order. When dry, the heaps are set on fire, and when thoroughly burnt, the ashes are spread equally over the whole surface of the field; the ground ploughed immediately, and the grain sown; for the sooner the operations are performed after the ashes are spread, the larger will be the crop.

NATURAL PRODUCTIONS.

The rivers afford plenty of fish, of different kinds. The hills and heaths feed infinite numbers of goats and sheep, and being manured with turf-ashes, they produce plenty of rye, and the vallies abound with black cattle and corn. This county has likewise a variety of fowls, wild and tame, and contains several lead mines, particularly about Wrexham, which yield plentiful supplies of ore.

MANUFACTURES.

The manufactures of this county are chiefly of gloves and flannels; the former at Denbigh, and the latter at Wrexham.

MARKET TOWNS.

The market towns of this county are Denbigh, Llan-croft, Ruthin, Wrexham.

We entered this county by crossing the river Clwyd, at St. Afaph, and first visited Denbigh, which from its original situation on a steep rock, was formerly called by the Britons, Cledfryn yn Rhos, that is the craggy hill in Rofs. It is the county town, and stands on a branch of the river Clwyd, called the Ilshod, two hundred and nine miles from London.

The situation of the old town being found inconvenient by the inhabitants, they abandoned it in the reign of queen Elizabeth, and a new one, much larger, was built at the foot of the hill. It is handsome, large, and populous, and in the opinion of many people thought the best town in North Wales. It is governed by a mayor, a recorder, and two bailiffs, annually chosen out of twenty-five burgeses and also a town-clerk, and two serjeants at mace.

Here is a good manufacture of gloves, and the business of tanning is very considerable; besides which it carries on a pretty good trade. The town is chiefly inhabited by glovers and tanners; but one great disadvantage which attends it is, that the ground on which it is built abounding with lime-stone, renders the water unhealthy, and is looked upon as the reason why the inhabitants seldom live to a great age.

Here are two churches, and formerly here was an abbey of Black-monks, of the order of St. Benedict, founded and endowed by Adam Salisbury, about the time of Henry III. The present proprietor is Sir Lynch Salisbury Cotton, baronet. Some ruins of the walls are

still remaining, besides an entire structure, which appears like the body of a country church.

This part of the country was given by Edward I. to David ap Griffith, brother to Llewelin, the last prince of North Wales; but he being soon after attainted and beheaded for high treason, it was given by the same king to Henry Lacy, earl of Lincoln. This earl fortified the town with a wall, not large in circuit; but very strong, and on the south side of it erected a castle, adorned with many high towers; but his only son being unfortunately drowned in the well of this castle, his grief on this occasion made him desist from the work, and leave it incomplete. After the death of the earl of Lincoln, this castle, by the marriage of his daughter Alice, came into the possession of the house of Lancaster. King Edward II. gave it to Hugh Spencer, and afterwards Roger Mortimer became the possessor of it in the reign of king Edward III. which Roger fixed up his own arms on the chief gate. After his execution it came to William Montacute, earl of Salisbury, but was soon after restored to the Mortimers; and by these at length it came to the house of York, and at present belongs to the crown. It was delivered up to the parliament army, on the twenty-sixth of October, 1646. It appears to have been a place of prodigious strength, not only on account of its situation, but likewise from the hardness of the stones, and unusual thickness of the walls. It is now very much decayed, but the very ruins are venerable. Great part of the hill is still standing, which the ignorant inhabitants mistake for the ruins of a church. The remains of the hall give the traveller an idea of the grandeur of this place.

The prospect from this castle is most enchanting. Beneath, the vale of Clewyd displays her bosom profusely gay to the admiring spectator. The banks of the river Clwyd, decorated with seats; the town of Rythen, and the city of St. Afaph, with the mountains rising at a distance, form a most delightful view.

Denbigh has a good weekly market on Wednesdays, for corn, cattle, and provisions, and three annual fairs, viz. May the fourteenth, July the eighteenth, and September the twenty-fifth, for cattle and small ware.

Sir Hugh Middleton, a great benefactor to the city of London, was native of this town.

This gentleman raised a considerable fortune by working some silver mines in Cardiganshire, by which he is said to have cleared two thousand pounds a month for several years together. In the mean time the city of London, not being sufficiently supplied with water, three acts of parliament were successively obtained, by which the citizens were allowed full power to bring a river from any part of Middlesex and Hertfordshire; but this project was laid aside as impracticable, till it was undertaken by this great man, who, after having made an exact survey of all the rivers and springs in Middlesex and Hertfordshire, made choice of two, one in the parish of Amwell near Hertford, and the other near Ware, both about twenty miles from London. These two streams being united, he conveyed them at a very great expence towards the city; but when he had brought the water into the neighbourhood of Enfield, the greatest part of his fortune was spent, upon which he applied to the lord mayor and common council; but they refusing to assist in carrying on this noble work, he had recourse to king James I. who sharing with him in the expence and profits, the design was happily effected, and the water brought into the reservoir at Islington on Michaelmas-day 1613. By this noble work Sir Hugh greatly impaired his fortune; however, though he was a loser in point of profit, he was a gainer in point of honour; for king James I. conferred upon him the honour of knighthood, and afterwards created him a baronet; besides which, he had the much greater honour of being remembered by posterity as the benefactor of this country. At his death he bequeathed a share in this New River Water to the Goldsmiths company, of which he was a member, for the benefit of their poor.

Beyond Denbigh lies the vale of Clwyd, which we have

have already mentioned; and the prodigious chain of mountains that almost surround it, the highest of which is called Moelenhi, on the top of which is a military fence or rampire, and a very clear spring. There are also several other old forts or intrenchments in this county. As first, Pen y Gar vawr on Kader Dhimmæ, distant about a mile from Kerig y Drudion, which is a circular ditch and rampire, of at least one hundred paces in diameter. It seems to have had once a kind of wall, but the stones have been long since carried away by the neighbours. Another is at Kaer-Dhynod, which lies in the parish of Lhan-Vihangel. It lies close by the river Alwen, and is rather of an oval form than circular. The dyke or rampire consisted of a vast quantity of stones, that are now thrown together, without any order. On the river side it is about three hundred feet perpendicular, but not half so high in any other part.

On the other side of the river is a steep hill, about twice as high as Kaer-dhynod, on which lies Kaer-vorwyn, that is, the maiden fort. This is a large circular intrenchment, and much more artificial than the former. Kaer-dhynod, as Mr. Lloyd, supposes, was formerly a British camp, because it agrees exactly with the description Tacitus gives of the camp of king Caractacus. There is also a third fort named Dinas Melin y Wig, which is thought to have been a British town, because it answers to the description Cæsar gives of such a place; for he tells us, that the Britons call that a town, which is in the midst of a wood, surrounded with a vallum and a ditch, to prevent the incursions of the enemy; and this place is full of woods, dingles, and the like. The fortification is fifteen or twenty yards high, where lowest; it is faced for the most part with a craggy rock, and encompassed with a deep trench, having two entries, called the Upper and Lower Gates.

Eastward of the vale of Clwyd, and without it, lies Yal, a small high mountainous track, if compared with the neighbouring parts. No river runs into it from any other part, though it sends forth several streams. Its situation lays it open to the winds from every corner, which renders it a very cold, bleak country. However, these mountains are well stored with oxen, sheep and goats; and the vallies, in some places, are tolerably fertile in corn, especially to the east of the river Alen. But the western side is barren, and interspersed with heaths and deserts. It contains nothing remarkable, except the ruins of a small monastery, seated very pleasantly in a valley, among woody hills, ten miles south-east of Ruthin, and is extended in the form of a cross. In the British language, this place was called Llan Egwest, also Pont y Groes, which signifies Valle crucis, from their presenting king Edward I. with a piece of the holy cross, which present procured them several immunities. This abbey was for Cistercian Monks, and is pleasantly seated in the township of Maes yr Ychen, under a hill, called Bron vawr, in the parish of Llan-gollen, near the north banks of the river Deë. It was built by Madock, son of Griffith Maelor, lord of Bromfield, or Lower Powes Chirk and Yawl, about the year 1200. It was confirmed to the said monks by his son in the year 1250, and was dedicated to God and the blessed Virgin. This abbey is in a lordship which belonged to the late Sir Watkin William Wynne.

Llanfannan is seated on the river Alne, eight miles west of Denbigh, and is only a village; but it has four annual fairs, viz. May the eighteenth, August the seventeenth, October the twenty-sixth, and November the thirtieth, all for cattle. This place is noted for a cave, made in the side of a stoney hill or rock, wherein are twenty-four seats, some bigger and some less; and is greatly frequented by shepherds and others, who look after the cattle; it is now known by the name of Arthur's round table.

From hence we continued our journey to Llanroft, a small place seated on the river Conway, on the very edge of the county, one hundred and ninety-eight miles north-west of London: It has a free-school, and a market-house, built at the expence of Maurice Wynne, Esq; There is here a curious bridge over the

Conway, into Carnarvonshire, one hundred and seventy feet long, and fifteen wide. It consists of three arches; of which that in the centre is sixty-one feet wide, and the others thirty and a half.

Here is a weekly market on Tuesdays, and five annual fairs, viz. on April the twenty-fifth, June the twenty-first, August the ninth, September the seventeenth, and December the eleventh, for cattle and small pedlars wares.

We next proceeded to Ruthin, situated between the two branches of the river Clwyd, one hundred and eighty-four miles from London. It is a large populous town, but has no parish church, being itself part of the parish of Lhan Rudd, in its neighbourhood. Here are however a good free school, and an hospital, both founded by Dr. Goodman, in the reign of queen Elizabeth.

Ruthin, not many years ago, was famous for a stately castle, which, as well as the town, was built by Roger Grey, to whom king Edward V. granted almost the whole vale, which, for a long succession of years, continued to be the seat of his posterity. The ruins of the castle shew it to have been once a place of great strength, and capable of containing a considerable number of people.

Here is a weekly market, held on Mondays, the largest of any in the vale; and five annual fairs, viz. March the nineteenth, Friday before Whit-Sunday, August the eighth, September the thirtieth, and November the tenth, for cattle and small pedlary.

Among the hills, south-west of Ruthin, is a place called Kerig y Drudion, which, according to Camden, signifies the Druid stones; and here are likewise still to be seen two stone monuments, supposed to have been erected by the ancient Druids. They are called by the Welsh Kistieu Maen, or Stone-Chests; and one of them is distinguished from the other by the name of Karchar Kynrick Rwth, or Kynrick Rwth's prison. They stand north and south, at the distance of a furlong one from the other; they are in the form of a chest, and consist each of seven stones; of these stones, four which compose the top, bottom, and two sides, are above six feet long, and three broad; a fifth stone forms the south end of the chest; at the north end is the entrance, secured by a sixth stone, which formed the door, and was upon occasion removed; this door was clasped or fastened by a seventh stone, of a vast weight, which was laid over the top stone, and when the door was to be fastened was moved towards the north end. Though these stone-chests have given the name of Druid Stones to the place where they are found, and though one of them is also called Kynrick, Rwth's prison, yet it is not probable that they were intended for prisons by the Druids, who constructed them.

Kynrick Rwth was a petty tyrant in this neighbourhood, of much later times than the Druids; he thought fit to shut up some person who had offended him in one of these cells, which gave occasion to the calling it his prison; but for what use they were at first intended, is not conjectured.

Leaving Ruthin, we pursued our journey to Wrexham, by the Saxons called Wintlesham. It is situated in a good soil, on the bank of a stream that falls into the Dee; and in a small territory, called Bromfield, said to abound in lead, one hundred and sixty-seven miles north-west of London. The town is large, well built, and well frequented. It is remarkable for a very curious and beautiful church, in which was a noble organ, that was destroyed in the great rebellion. The tower is lofty, and of most exquisite workmanship, adorned with neat carved work and several figures. The church was built about the year 1507, and dedicated to St. Giles. It is said to be heretofore collegiate; it is in length one hundred and seventy-eight feet, in breadth sixty-two, and the height of the stone building of the tower one hundred and thirty-five feet. Old accounts mention, that the town was burnt in the year 1463. Besides this church, the town has two meeting-houses. Wrexham is a great mart for flannel, which is here bought

bought up in vast quantities. This manufacture is the chief employment of the poor in the neighbourhood.

Here are two weekly markets, but that on Mondays is small, though that on Thursdays is very considerable for corn, cattle, and provisions; and four fairs, namely, on the twenty-third of March, Holy Thursday, the sixth of June, and the nineteenth of September, for cattle, horses, hardware, hops, Manchester goods, &c. Not far from this town, some parts of Offa's dyke are still visible. This was a trench cast up by Offa, the great king of Mercia, as a boundary between his subjects and the Britons.

To the southward of Bromfield lies a tract called Chirk; this is a mountainous country, in which are two castles. One of them has the name of Chirk, but was anciently called Castall Crogen. It lies near the borders of Shropshire, but we do not find when it was first founded. However, Roger Mortimer, the third son of Roger, earl of Wigmore, rebuilt it, and it is now the seat of the Middletons. It is still very entire, though it is built after the ancient manner, and seems much more proper for a place of defence, than for a dwelling-house. It has three round towers, one at each end, and one in the middle; and the structure between each is much about the same breadth as the diameter of the towers; though they are all contiguous. John Mortimer, lord of Chirk, and grandson of the afore said Roger, sold the lordship of Chirk to Richard Fitz-Alan, earl of Arundel.

The village of Chirk, which is a little to the eastward of this castle, and nine miles south of Wrexham, has three fairs, on the second Thursday in February, the second Tuesday in June, and on November the twelfth, for sheep, horned cattle, and horses.

Dinas Bran Castle is also in the territory of Chirk, seated near the northern bank of the river Dee, on the high top of a sharp hill. Its name seems borrowed from a brook, so called in its neighbourhood. This was in the reign of king Henry III. the seat of Griffith ap Madoc (a descendant from the founder, and himself a benefactor to the abbey of Llan Egwest, or Vale Crucis) who was stiled Lord of Dinas Brân, from his possessing and dwelling in this castle. He took part with king Henry III. and king Edward I. against the prince of

North Wales, for fear of whom he was forced to shut himself up in his castle. This Griffith, by Emma, daughter of James lord Audley, had issue Madoc, Llewellyn, Griffith, and Owen. The lordship of Bromfield and Yale, and the castle of Dinas Brân, came to Madoc, and that of Chirk to Llewellyn; but the wardship of these minors was given by the king to John earl of Warren, and Roger Mortimer, who, in the tenth of Edward I. obtained the lands for themselves by the king's charter. This castle was lately, if it is not still, in the possession of Richard Middleton, Esq. There are large ruins of this castle still remaining, which may be seen at a great distance, where one part of them has the appearance of a country church.

Holt-castle is seated not far from Wrexham, on the western bank of the Dee, in the very edge of the county, where that river divides it from Cheshire. The Britons called it Castell Llew, or Lyons-castle. It is supposed to have been anciently a Roman camp. John, earl of Warren, in the reign of king Edward I. began to build here a castle, which was finished by his son William. The said earl John, being guardian to Madoc ap Griffith, a British prince, treacherously seized this and some adjacent possessions to the prejudice of his pupil. From the earls of Warren it came to the Fitz Alans, earls of Arundel; and from them to William Beauchamp, baron of Abergavenny; and afterwards to William Stanley, who being beheaded, this, with his other estates, were forfeited to the crown. This castle surrendered to the parliament forces on the nineteenth of January, 1646. Only a few fragments of the walls are now remaining.

Llandogla is a village ten miles west of Wrexham, in the road which leads to Chester, and has five fairs, namely, on March the eleventh, April the twenty-fifth, June the twenty-third, August the fourth, and October the twenty-sixth, for cattle.

MEMBERS of PARLIAMENT.

Denbighshire sends two members to parliament; one knight of the shire for the county, and one burges for the borough of Denbigh.

M E R I O N E T H S H I R E.

MERIONETHSHIRE, or Merionethshire, is thus called by a variation from its Welch name Sir Verioneth, and is bounded by Caernarvonshire and Denbighshire on the north; by another part of Denbighshire, and by Montgomeryshire on the east; by St. George's channel on the west, and by a small part of Cardiganshire and Montgomeryshire on the south. It extends thirty-five miles in length from north to south, twenty-five in breadth from east to west, and is one hundred and eighteen miles in circumference; in which are six hundreds, four market towns, thirty-seven parishes, about two thousand five hundred and ninety houses, and seventeen thousand inhabitants. It lies in the province of Canterbury and diocese of Bangor, and Dolgelpe, a market town, nearly in the middle of it; is one hundred and eighty-seven miles north-west of London.

This county, in time of the Romans, was part of the country inhabited by the Ordovices, a brave and powerful nation.

R I V E R S.

The principal rivers of this county are the Dyffi, the Avon, the Drwrydh, and the Dee.

The Dyffi, or Dovey, rises among some very high mountains, that form a chain on the eastern borders of the county, and running southward into Montgomeryshire, flows south-west; and leaving that county at Machynleth, a market town, separates the counties of Merioneth and Cardigan, and soon after falls into Cardigan bay.

The Avon has its source on the east side of a large forest, called Penrose wood, and running south-west, passes by Dolgelpe, and falls into Barmouth bay, some miles to the west of that town.

The Drwrydh issues from a lake in the northern extremity of the county, near the source of the river Conway in Caernarvonshire, and running south-west, falls into an arm of the Irish sea, called Traeth Bychan.

The Dee near its source runs through a considerable lake on the south side of Bula, called Pimble Maer, or Lhyn Tigid, without mixing with it; the fish at least of both waters we are told do not mingle; for though the Dee abounds with salmon, none are caught in the lake, out of the stream of the river; nor does the Dee carry off the Gwiniards, a fish peculiar to the lake. The word gwiniard signifies much the same as a whiting, but does not in the least resemble that fish, the shape being much like a salmon, and the usual length about twelve or thirteen inches; the back is of a dusky colour, and the belly white. The scales are of a middle size, and the upper jaw is somewhat more prominent than the lower, with a mouth much like that of a herring. The taste is much like that of a trout. It is like, and probably the same, as that fish called ferra, in the lake of Geneva. Hence some infer, that there is a great resemblance between the Alpine lakes and those of the Welch mountains; because they afford the same sorts of fish, and the high rocks Alpine plants. The course of the Dee has been described among the rivers of Cheshire.

The smaller rivers of this county are the Kessilawn, the Angel, the Cayne, the Atro, the Skethye, and the Desunni.

The above lake called Pimble, or Plenlyn Mear, is of considerable extent; and, according to Camden, has been accurately described by an antiquarian and poet, in a few Latin verses, which have been thus translated into English:

Where eastern storms disturb the peaceful skies,
In Merioneth the fam'd Plenlyn lies.
Here a vast lake, which deepest vales surround,
His watry globe roles on the yielding ground.
Encreased with constant springs that gently run
From the rough hills with pleasing murmurs down,
This wond'rous property the waters boast,
The greatest rains are in its channels lost;
Nor raise the flood; but when loud tempests roar,
The rising waves with sudden rage boil o'er,
And conquering billows scorn the unequal shore.

REMARKS on the INLAND NAVIGATION of Merionethshire.

As there are no rivers navigable either in this county or that of Caernarvonshire, except their mouths or entrances into the sea, we shall defer our account of them till we have finished these two counties, and then give the whole together.

AIR, SOIL, and NATURAL PRODUCTIONS.

This being a rocky, mountainous country, the air is extremely cold and bleak; it is also esteemed unhealthy, on account of the many noxious vapours that rise from the Irish sea; but these can have no great effect, on account of the sharp winds, which almost continually blow.

Merionethshire is generally considered as the most mountainous and barren county in all Wales; but if a variety of the most beautiful prospects can render a country agreeable, few can in this respect be compared to it; for it not only affords mountains of an extraordinary height, inaccessible rocks, a variety of lower hills, woods, and plains, and some fruitful vallies, but a prospect of the sea, and of many lakes, rivers, and cataracts. The highest mountains are Kader Idris, Aren Voudhwy, Aren Benhyn, Arennig, Moelwyn, Mannod, &c. Kader Idris is probably one of the highest mountains in Britain; and, as a proof of it, affords a variety of Alpine plants. It has been asserted, that the tops of some of these mountains are so near, that men, standing upon two of them, may converse together, and yet be scarce able to meet in a whole day; but this is probably a fiction.

This county produces but little corn, and the inhabitants applying themselves almost wholly to grazing of cattle, live chiefly on butter, cheese, and milk; for the vallies afford excellent pasture, and such an incredible number of sheep feed on the mountains, that Merionethshire is said to have more of them than all the rest of Wales. This county is likewise well provided with deer, goats, fowl, and fish.

REMARKS on the HUSBANDRY of Merionethshire.

In this county they have very little good land, and they make so bad a use of that, which nature has given them with so sparing a hand, that some might be ready to conclude that they prefer their barren rocks to the most fertile soil. In some places between the mountains, there are to be seen a few acres of good land, where the earth has been washed away from the hills. The water generally stagnates in these places, and they never take the trouble of draining them, but cut them in turbaries for fuel. Thus in a few years, they totally ruin their finest meadow land. The greatest part of the country consists of barren mountains, incapable

of improvement. They serve, however, to subsist a great abundance of sheep. With the wool they make considerable quantities of flannel, which they export. This is the staple manufacture and support of the county.

MANUFACTURE.

The only manufacture in this county is Welsh cotton.

MARKET TOWNS.

The market towns in this county are Bala, Dolgelhe, Harlech, and Dinasmondy.

We crossed the river Dee, and entered this county near a village called Earwen, and took the road through a very mountainous county to Bala. This town obtained its name from its situation at the north end of Pimble meer; the word signifying a place where a river issues from a lake. It is a corporation town, one hundred and eighty-four miles from London, governed by bailiffs, and enjoys many privileges.

Here is a weekly market on Saturdays, and two annual fairs, viz. May the fourteenth, and July the tenth, for horned cattle, sheep and horses.

At Bala are three mounds, one of which is called Tornmen y Bala, another Brynlhyfk, and the third Mwnwgly Lhyn, which are generally mistaken for sepulchral monuments; but the real intention of them appears to have been for watch stations, when this country was the seat of war, at the beginning of the Roman conquests.

Not far from hence in the parish of Lhan aw Lhyn, are the ruins of an ancient castle, called Castell Corndochen. It is seated on the top of a very steep rock, at the bottom of which is a pleasant valley. There are still the remains of a wall, within which are three turrets, a square, a round, and an oval one, which is the largest. The mortar of this building was mixed with cockle-shells.

From Bala we continued our journey southward, and next arrived at Dinasmondy, a small town, one hundred seventy-six miles from London. It is an inconsiderable town, of no note but for a weekly market on Fridays, and four annual fairs, viz. July the second, September the tenth, October the first, and November the thirteenth, for sheep, black cattle and horses.

Leaving Dinasmondy, we passed on to Dolgelhe, so called from its original situation, which was in a woody vale. It stands on the south bank of the Avon, at the foot of mount Idris, one hundred and eighty seven miles from London. Here is a considerable manufacture of Welsh cottons, and the town is well provided with inns for the accommodation of travellers.

This town is supposed to have been a Roman station, from the coins dug up in its neighbourhood, two of which were of silver, and of the emperors Trojan and Hadrian. The first bore the following inscription.

IMP. TRAIANV AVG. GER. DAC. P. M. TR. P. COS.
v. P. P. S. P. Q. R. OPTIMO PRINE.

The second was thus inscribed:

IMP. CAESAR TRAIAN HADRIANVS. AVG. P. M. TR.
P. COS. III.

Dolgelhe has a weekly market on Tuesdays, and six annual fairs, viz. May the eleventh, July the fourth, September the twentieth, October the ninth, November the twenty-second, and December the sixteenth, for sheep, black cattle and horses.

Cumner, or Kemmer, a village, about two miles north of Dolgelhe, had an abbey of Cistercian monks, founded by Meredith and Griffith, sons of Conan ap Owen Gwynedd, about the year 1200, and dedicated to St. Mary. Llewelin ap Jorwerth, prince of North Wales, afterwards confirmed their donations by a very full and gracious charter, dated 1209, to Efan, the then abbot of Kemmer, at which time he likewise conferred more lands on the said monastery. In the wars of king Henry III. with the Welch, the English would

have burnt this abby in 1232, but the abbot paid three hundred marks to save the house from destruction. It is now in the possession of Robert Vaughan, Esq; but the greatest part of it is demolished, there being only some of the walls standing, and in them are windows of the Gothic taste. Its annual revenues were valued at the suppression at fifty-one pounds, thirteen shillings and four-pence.

Continuing our journey from hence about fourteen miles, we came next to Harlech, so called from its situation, the name signifying a pleasant rock.

It stands near the sea shore, and is two hundred and ten miles distant from London. It has a good harbour for ships, though few or no ships belong to the town, which is governed by a mayor, and has an old decayed castle, situated close by the Irish sea, on a steep rock. It was originally a strong fort of the ancient Britons, and by them called Twr Bronwen, from a lady of that name, who lived about the year 260. It was rebuilt about the year 877, by Collwyn ap Tangus, and then changed its name to Caer Collwyn. This castle held out strenuously against king Edward IV. but at length it was with much difficulty taken by William Herbert, earl of Pembroke. It also held out one of the last for king Charles I. but surrendered on fair conditions to the parliament forces on the sixteenth of March, 1646; and is now in the possession of the crown, and has a garrison for the security of the coast. The governor of this castle is, by patent, appointed mayor of the town, but the houses are mean, and it is but poorly inhabited. Harlech is supposed to have been a Roman town, from several Roman coins that have, at different times, been dug up in and near it. In a garden near the castle was found, in 1692, an ancient golden torques, weighing about eight ounces, and consisting of a wreathed bar of gold, or three or four rods twisted together, about four feet long, and hooked at both ends; but whether it was British or Roman cannot be easily determined. This seems, by its length, to have been designed for use as well as ornament, and was perhaps for holding a quiver of arrows.

Harlech has a weekly market on Saturdays, and four annual fairs, viz. Thursday after Trinity, June the thirtieth, August the twenty-first, and December the eleventh, for cattle.

Near this town are many remains of Roman antiquity.

At Festineog, a village north of Harlech, in the north-west extremity of this county, is a stone causeway, called Sarn Helen; or Hellen's Way, and supposed to have been made by Hellen, the mother of Constantine the Great; who it is believed occasioned the making of several other high ways in Wales.

On a mountain called Mikneint near Rhyd, or Halen, within a quarter of a mile on this road, there are remarkable stone monuments, called the graves of the men of Ardwy, of which there are at least thirty in number, and each grave is said to be about two yards long, and to be distinguished by four pillars, one at each corner. They are somewhat of a square form, about two or three feet high, and nine inches broad. According to tradition, these are the sepulchral monuments of persons of note slain here, between the men of Dyffryn Ardudwy, and some people of Denbighshire; however, this is uncertain, and some take them to be Roman. Kaer-Gay, that is, Caius's-castle, is not far from this place; it was built by one Caius, a Roman, of whom the people of the neighbourhood relate incredible things.

Near the same causeway are several other sepulchral monuments; and in 1687, Mr. Camden copied the following inscription from a stone, called Bedh Porws, or the grave of Porus, which that great antiquary supposes to relate to some Roman interred there in the second or third century; the words are PORIVS HIC TVMVLO JACIT HOMO—RIANVS FVIT.

About the year 1684 was discovered, in a moorish ground, where turf is dug up for fuel, a gilt coffin, which was of wood, and so well preserved, that the gilding remained very fresh; and is said to have contained

tained a skeleton of an extraordinary size. This is, perhaps, the only instance upon record, of an interment in a moor of peat or turf, and yet the bituminous earth, of which such moors consist, is known by experience, to preserve wood better than any other; for trees are frequently found in it very sound, though they must have been buried in times before the reach of history.

In the year 1688, were found in a rock known by the name of Katreg Dhiwin, about fifty weapons of cast brass that seemed to be short swords or daggers. They were of different forms and sizes; some of them being two feet long, others not more than twelve inches, some of them flat, and others quadrangular. It is said that several of them were gilt; but the handles, which are supposed to have been of wood, were all wasted, though in a few of them, the two brass nails by which they were fastened still remained, being headed or rivetted on each side.

About two miles from Harlec is a remarkable monument, called Kacton Arthur, which is a large oval stone table, about ten feet long and seven broad, two feet thick at one end, but not more than an inch at the other. It is placed on three stone pillars, each about half a yard broad: two of them support the thick end, and are between seven and eight feet high; but the height of the third, at the other end, is not above three feet.

The country about Harlec was, in the year 1694, strangely annoyed during above eight months, by a surprizing fiery exhalation, which was seen only in the night, and consisted of a livid vapour that arose from the sea, or seemed to come from Caernarvonshire, across a

bay about ten miles broad. From this bay it spread about a mile over the land, and set fire to all the barns, stacks of corn and hay in its way: it likewise infected the air, and blasted the grass and herbage, causing a great mortality among the horned cattle, sheep and horses. It constantly proceeded to and from the same place, in stormy as well as in calm nights, but more frequently during the winter, than in the following summer. It never fired any thing but in the night, and the flames, which were weak, and of a blue colour, did no injury to the inhabitants, who frequently rushed into the middle of them to save their hay or corn.

This vapour was at length extinguished by the blowing of horns, ringing of bells, firing of guns, or putting the air into motion by various other ways, whenever it was seen to approach the shore.

Among the several conjectures that have been made concerning the cause of this surprizing phenomenon, some have thought it proceeded from locusts, many of which are said to have been drowned in the bay, and to have died ashore, about two months before; but to this hypothesis it is objected that no such effect was ever known, as the consequence of a swarm of locusts perishing either at sea, or on shore, in places where they have been much more numerous. Something like this, however, both in appearance and effect, happened somewhere upon the coast of France in the year 1734.

MEMBER of PARLIAMENT for this County.

Merionethshire sends but one member to parliament, who is knight of the shire for the county.

C A E R N A R V O N S H I R E.

THE name of this county is derived from Caernarvon, the county town, which signifies the fortress of Arvon, for so the county was once called. Its name in Welsh is Sir Gaernarvon, and before Wales was divided into counties it was called Snowdon forest. It is bounded on the north, south, and west sides by the Irish sea; on the north-west it is separated from the island of Anglesea by the straits of Menew, and bounded on the east by the counties of Denbigh and Merioneth. It is in the form of a wedge, and extends in length from north to south, about forty miles; from east to west about twenty, and is near an hundred in circumference. It is divided into seven hundreds, and sixty-eight parishes; in which are included one city, one borough, five market towns, and three castles; about two thousand houses, and between sixteen and seventeen thousand inhabitants. It lies in the province of Canterbury, and diocese of Bangor. Caernarvon, the county town, nearly in the center of it, is two hundred and fifty-eight miles north-west of London.

Caernarvonshire was in the time of the Romans part of the country of the Ordovices. Britain, after the Romans had deserted it, being overrun by the Danes and Saxons, the Britons retreated to this part of the island, which they defended against the English till the time of Edward the First, when Llewellyn ap Griffith was reduced to the necessity of holding this country and Anglesea as tenant in fee to the crown, paying one hundred marks yearly; but being soon afterwards, anno 1228, instigated by his brother David to take up arms, he surprized lord Clifford, the king's general on the frontiers, and killing several of his men, took him prisoner; then penetrating still farther into the English territories, he defeated the earl of Surrey, who was sent to stop his progress, and committed great ravages. King Edward, however, resolved to march against him in person, which he accordingly did, and Llewellyn retired to the mountain of Snowdon, to a post that could not be attacked. Edward invested him here, blocking up all the avenues by which he could escape, and laying a bridge of boats over the Menai, sent some troops over into Anglesea. When this was done he left the management of the blockade, which was likely to hold long, to Roger Mortimer, waiting the issue at the castle of Rhuddlan, which he had built during the late war. Llewellyn might doubtless have tired out the patience of his enemy, had he not, by an extraordinary accident, been induced to deprive himself of that advantage. Some of the English, under William lord Latimer and Thomas de Tony, who were in Anglesea, must needs pass the bridge above mentioned to view the country, when being suddenly attacked by the Welch, they were entirely defeated; there being slain and drowned no less than fifteen knights, thirty two esquires, and about 1000 common soldiers. This success induced Llewellyn to march down from Snowdon to engage the English, but he was soon convinced of his rashness; for after seeing his army entirely routed at Llandweyr in Buelt, on the eleventh of December, 1182, he was himself slain on the spot by Stephen de Francton; and his head, crowned with ivy, was by the king's order exposed to view on the walls of the tower of London. David was soon after taken and executed as a traitor, his head being fixed near that of the prince his brother, and his four quarters sent to York, Bristol, Northampton, and Winchester; thus by Edward's cruelty, an end was put to the dominion of the Britons in Wales.

The southern part of this county forms a peninsula, thirteen miles in length; and in the widest part about ten miles broad. In the Welch language this is called

Lhyn; and in different copies of Ptolomy, it is called Caganum, Janganum, and Langanum; but from the present name, Langanum seems to be the most proper reading.

R I V E R S.

The principal rivers of Caernarvonshire are the Conway, and the Seiont. The Conway has its source from a lake called Llyn Conway, situated where the counties of Caernarvon, Denbigh, and Merioneth meet; and running north, serves as a boundary between the two first mentioned counties, falling into the Irish sea, at Aberconway. This river is but about twenty-four measured miles in length from its source to the sea, yet is a very considerable stream; for it receives in its course so many small rivers and brooks, that it is navigable for shipping, within a few miles of the lake from whence it springs. Its name is supposed to signify in Welsh, the chief of Rivers; the Seiont rises from a lake, called Llynpri's, in Snowdon Hills, and taking its course westward falls into the straits of Menew, at Caernarvon.

Besides several nameless rivers, there are between fifty and sixty lakes; which have generally the same names as the rivers that proceed from them, or are named from the colour of the water. There is one under the highest peak of Snowdon, called Tynon Las, which signifies the Green-Fountain; but it is not proper to this hill, for Mr. Ray has observed the same thing of some of the lakes among the Alps. Others receive their names from some village or parish church adjoining, or from a remarkable mountain or rock under which they are seated. Some have affirmed, that there are lakes on the highest tops of these mountains, one of which was remarkable for a wandering island, and that the fish had only one eye each; but these are mistakes, for there are no lakes on the highest part of any of them. The lake with the wandering island, is only a small pond, with a little green patch near the brink of it, which was the occasion of this fable; but there is not the least foundation for affirming the fish have but one eye. Most of the lakes are well stocked with fish, which are generally trouts and eels, except the torgock found in some; but besides this, there is another Alpine fish, known by the name of the gilt-char, at least it is thought to be so by the best naturalists. There are also some of these bred in Wynander river, in the county of Westmoreland. This fish is broader in proportion than a trout, and the belly is more prominent; but in length never exceeds twelve inches. Some however say, that the torgock and gilt char, are the same fish, which in Wynander Meer already mentioned, is called the red char, it having its name from its red belly; and the Welch word, torgoch, is of the same import, for it signifies a red belly. This fish is to be found in Lhyn Peris in this county, and at four other places in Wales. The season for catching it, begins about the twenty-second of November, and continues for a month, but they are always taken with nets.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of Caernarvonshire is rendered cold and piercing, not only by the great number of lakes, but by the very high mountains, which, towards the middle of the county, rise one above another, so as to have acquired the name of the British Alps. These mountains are not only the highest in the island, but are also in some places inaccessible on account of their immense steepness.

The extremities of the county, however, particularly those bordering on the sea, are as fruitful and populous, as any in North Wales. They yield great plenty of fine barley, and feed vast herds of cattle and sheep. There are, between the hills, many pleasant and fruitful vallies, finely contrasted by the dreary wastes, with which they are surrounded; and numerous flocks of goats and sheep feed upon the mountains. This county abounds in wood, plenty of fish are produced in the lakes and rivers, and the coast is well supplied with sea fish of all sorts.

The river Conway produces not only fish in great plenty, but pearls as large, and often of as good colour, as any in Britain or Ireland; they are found in large black muscles, which, according to Dr. Lister, are the thickest and heaviest of all others. They are peculiar to swift strong rivers, and are common in Wales, as well as in the north of England, Scotland, and some parts of Ireland. Those that fish for these shells can guess pretty well by the outside of the muscles whether they contain any pearls or not.

REMARKS on the HUSBANDRY of CAERNARVONSHIRE.

A considerable part of Caernarvonshire and the island of Anglesea, is naturally a very good soil, but very much unimproved. What they principally want, are good fences and shelter for their cattle: The only inclosures that they have, are small banks of earth or turf-mounds thrown up. These continue but a very little time, as the cattle destroy them in the winter, and the farmer is at a considerable expence in repairing them every spring. In such places as are exposed to the sea winds, the trees will not grow to any height; and all kinds of quicksets are long in their growth. So that the gentlemen and farmers seldom judge it worth the trouble and expence to plant. But satisfied I am that in a few years it would answer; and nothing would contribute more to the improvement of the country, than if such a practice was generally adopted.

There are extensive fens undrained, and the greatest part of the country consists of nothing but furze. The best land lets in general from three to five shillings an acre; the price of labor about six-pence a day. There is great plenty of manure easily to be had; and, notwithstanding these advantages, the country is unimproved.

The farmers and laborers are most of them miserably poor; they hold the lands generally from year to year, rack rent. If one more industrious than the rest, should make any improvement, the landlord either advances his rent, or turns him out. So it is the interest of the farmer to let them lie waste, as he has no certainty of a return when he is liable to be turned out at the landlord's pleasure. Thus they only take care to get just sufficient by their industry to supply present want, and let the morrow provide for itself.

Nothing would contribute more to the cultivation of the country, than the granting of leases for life to the farmers, even at advanced rents. Then they would have a certain prospect of profit for their labor and expence; which would ultimately turn out to the benefit of the landlord, the tenant, and the public.

Having taken notice above of the number of stupendous mountains which stand in the inner parts of this county; it will not be improper to give some account of them in this place, before we proceed to a description of the several market towns.

They extend from north to south a considerable way; and are so surrounded with rocks and craggy places; contain such a number of valleys, incumbered with woods and lakes; that they served as a safe retreat to the Britons in the time of war; being not only impassable to an army, but even to men lightly armed.

The Welsh name for these mountains, is Kreigieu Eryrew, and the lower parts of them are so fertile in grass that it is a common saying among the Welsh, that the mountains of Eryrew, would, in case of necessity, afford pasture enough for all the cattle in Wales.

Snowdon-hill is by far the highest among them, but having a top considerably broader, the difference in

height is not very visible at a distance. These hills are very beautifully described by Mr. Pope, in the following lines:

So pleased at first the tow'ring Alps we try,
Mount o'er the vales and seem to tread the sky;
Th' eternal snows appear already past,
And the first clouds and mountains seem the last.
But those attain'd, we trembled to survey,
The growing labors of the lengthened way;
Th' increasing prospect tires our wand'ring eyes,
Hills peep o'er hills, and Alps o'er Alps arise.

We found a great change in the temperature of the atmosphere as we ascended the mountain. When we had gone half way up, we found the wind rather high, attended with scudding clouds. But when we arrived at the summit, the air was calm and serene, and seemed much more subtle and rarified, less impregnated with vapors, and more agreeable for respiration.

hid above the clouds,
Though winds and tempests beat their aged feet;
Their peaceful heads, nor storms, nor tempests know,
But scorn the threat'ning rack that rolls below.

DRYDEN:

The most remarkable mountain next to Snowdon, is Penman-mawr, the most northerly of this chain, which on the side next the sea, rises almost perpendicular to so great a height, that few spectators would be able to look down the dreadful steep without terror. On that side a road about seven feet wide is cut out of the rock, winding up the steep ascent hill it rises about two hundred and forty feet above the level of the sea; and is nearly the same distance from the top of the rock, which at a great height hangs over the head of the passenger. On the side of this road next the precipice, the traveller was, till lately, only defended by a slight wall, in few places above a yard high, and in others by only a bank, that scarce rose a foot above the road; while the sea, of which he has an unbounded prospect, is seen dashing its waves below. But a few years ago, a wall was built, breast high, to the building of which, the city of Dublin greatly contributed. However, this, dangerous as it must appear, is the high road to Bangor and Holyhead, over which the lord lieutenant of Ireland passes in his way to that port. To the north east of this frightful road, and of a lesser promontory, a plain extends as far as the river Conway, which is the eastern limit of the county.

On the top of Penman-mawr, stands a lofty and impregnable hill, called Braich y Dhinias, where we find the ruinous walls of an exceeding strong fortification, and within them is the foundation of at least one hundred towers, all round, of an equal size, and about six yards in diameter, within the walls, which were in most places two yards thick, and in some about three. This castle, when standing, seems to have been impregnable, there being no way to assault it, the hill being so very high, steep, and rocky, and the walls of such strength. The way to it ascends with many turnings, infomuch that one hundred men might defend themselves against a whole army; yet there seems to have been within the walls, lodgings for twenty thousand men. At the top of the rock, within the innermost wall, is a well, which never fails in the driest summers.

About a mile from this fortification upon a plain mountain, is a circular intrenchment, about twenty-six yards in diameter; and on the outside are certain rude stone pillars, of which about twelve are now standing; some of them are two yards, and others five feet high; and these again are surrounded with a stone wall. About three furlongs from this monument, there are several vast heaps of small stones, supposed to have been collected in memory of a battle fought here between the Romans and the Britons; but others imagine they were designed to prevent the wild boars, then very common, from rooting up the dead bodies.

On the summit of another very high mountain, on the sea side, named Glyder, is a prodigious heap of stones, of an irregular shape, many of which are as large as those of Stonehenge, in Wiltshire. They lie in the utmost confusion, some of them reclining, and others lying

a-cross one another. A phenomenon which no person has been able to account for.

On the west side of the same mountain, among many other precipices, is one very steep and naked, adorned with a prodigious number of equidistant pillars; the interstices between which are supposed to have been occasioned by the continual fall of water down the cliff, which is exposed to a westerly sea wind. "But why," says the author of *England illustrated*, "the water should have dropped at these regular distances, before the hollows were formed, we are not told; possibly, the whole rock may consist of vast bodies of stone, with fabulous or earthy matter between them; and if so, the rain may have washed away the sand or earth from between the stony and solid parts of the mass on the top and the sides, and so formed the appearance of ruins above, and of pillars below, which may be considered as skeletons of these parts of the mountain."

To form any idea of these mountains, it is necessary to have seen something of the same nature, the Alps for example, because the common hills are simple heights or spires, but these are heaped one upon another, inasmuch that having climbed up one rock we come to a valley, and commonly a lake. Then passing by that we ascend another, and sometimes a third and fourth before we arrive at the highest peaks.

These mountains, as well as Kader Idris, and some others in Merionethshire, differ from those near Brecknock and elsewhere in South Wales, in being much more naked and inaccessible, and in having their lower skirts and valleys always covered, or scattered over with the fragments of rocks of all sizes, most of which seem to have fallen from the impending cliffs. Many months in the year, they are covered with snow; but generally speaking, no snow lies on them from the end of April to the middle of September, a few heaps only excepted, which do not melt till the latter end of June. It often snows indeed on the tops of these mountains in May and June; but then the snow or sleet, melts as soon as it falls. And when it snows on the high mountains it only rains in the valleys.

It is impossible to give a just description of the infinitely extensive and variegated prospects we enjoyed from the summit of these mountains; seas, rivers, plains, woods and islands, lay before us in the greatest diversity. We saw distinctly the north of England, the greatest part of Wales, Cheshire, Shropshire, Ireland, the Isle of Man, and Scotland. So unbounded is this view, that it is thought to be the most extensive circular prospect that can be seen in any part of the terraqueous globe. It is remarkable that the inhabitants of these mountains call any low country *Hendrew*, which signifies the ancient habitation. It is a common tradition among them, as well as those who inhabit the like places in Brecknock and Radnorshire, that the Irish were the ancient proprietors of this country; and this is the more remarkable, as these people have no communication with each other, there being near an hundred miles distance between them.

CITY and MARKET TOWNS.

The city is Bangor, though at present indeed it scarcely merits to be called a city; and the market towns are, Aberconway, Caernarvon, Puliheli, Newin, and Crickieth.

From Harlech we crossed an arm of the sea to Crickieth. It is a borough town, two hundred and fifty-six miles from London, governed by a mayor and two bailiffs, and joins with others in this county in electing a member to serve in parliament. There are the ruins of a castle on the top of a hill, and a gateway remaining; but the place shews it never could have been of any great extent. This castle is supposed to have been built, together with the town, by prince Llewellyn ap Jorwerth, about the year 1200.

In the year 1237, it was in possession of Prince David ap Llewellyn ap Jorwerth, who in violation of his oath, took his brother Griffith (then under the protection of the bishop of Bangor) and imprisoned him in this castle.

This town has a weekly market on Wednesdays, and four annual fairs, viz. on May the twenty-third, July the first, and October the eighteenth, all for cattle.

From Crickieth we proceeded to Pwllheli, or Puliheli, that is, a salt pool, situated on a bay of the same name, on the east side of the peninsula, between two rivers, two hundred and fifty miles from London. It is one of the principal towns in this county, has some trade by sea, is tolerably well built, and governed by a bailiff. Here is a good harbour, a weekly market on Wednesdays, and four annual fairs, viz. on May the thirteenth, August the nineteenth, September the twenty-fourth, and November the eleventh, for cattle.

In the adjoining bay are large beds of oysters, and plenty of fish; and some years they have a good herring fishery, but its chief commodities are butter and cheese. At Yftumllin, a little to the eastward of this place, there is a vein of yellow ochre.

We next proceeded to Nevin, or Newin, seated on the sea-shore, on the west side of the peninsula, almost opposite to the Puliheli, from which it is eight miles distant, and two hundred and forty-five miles from London. The pier at this place is very useful for the herring fishery, herrings and oysters being the chief commodities of the place. In the year 1747, there were five thousand barrels of salt herrings exported from hence and the parts adjacent, besides what was consumed in the country. They have also cod, whittings, whiting pollacks, millers thumbs, sea tench, lobsters, and crabs. The town itself is but mean, though it has a small market on Saturdays, and three fairs, viz. April the fourth, the Saturday before Whitsuntide, and August the twenty-fifth, for cattle.

At Borth, not far from Newin, are two fairs held annually, viz. on August the twenty-sixth, and October the twenty-fourth.

To the east of the south-east promontory of the peninsula, is an island called Tydwal, to the north of which, is Tydwal road, thought to be one of the best in Great-Britain, being a good outlet, and so extensive that it is large enough to contain the whole royal navy of England. Near it are several veins of lead and copper ore, and at Penryn du, there is a lead mine that has been formerly worked with advantage; but it is now under water, and yet might be recovered with proper engines. At a place called Mynhedd y Rhiw, not far from hence, there is found a blackish heavy hard stone, which is counted more proper than brass for the center pins of light engines to turn on. And farther on towards Bardsey sound, there is a beautiful red stone, which will bear a fine polish.

Bardsey, is a small island situated near the extremity of the south-west promontory of this peninsula. There was an abbey founded here before the year 516; it was dedicated to St. Mary, and continued till the dissolution, in the reign of Henry VII. when the annual revenue amounted to one hundred and forty-six pounds, one shilling and four-pence.

From hence we continued our journey to Caernarvon, situated on the straits of Meneu, or Menay, the channel that separates this county from the island of Anglesea, two hundred and fifty-eight miles from London. This town was called by the Britons, *Caer Seint*, from the river *Seint*, which runs by it; and it was here the ancient *Legontium* of Antoninus is thought by Camden to have been situated.

About the year 600, it was the seat of the British princes, but it gave way to the new town built in after times, called *Caernarvon*, or *Caer ar Von*, that is, the town overagainst *Mon*, or *Anglesea*; from which the county now borrows its name, as we have before observed. This town is encompassed with a firm wall, and over it are seen *Snowdon hills*. It is related that the body of the emperor *Constantius*, father of *Constantine the Great*, being found here about the year 1283, when king *Edward I.* was building this town and castle, he ordered it to be interred honourably in the new-church.

It is likewise said of this king, that he converted the profits of the archbishopric of *York*, then void, to the building

building and fortifying the castle; in one part of which was born, on the twenty-fifth of April, 1284; Edward of Caernarvon; the first prince of Wales, of the English blood; afterwards king of England, by the name of Edward II. They shew the queen's bed-chamber to all travellers that visit this castle. It is built in the Roman stile of architecture; and has one tower eminent above the rest called the Eagle's tower, from an eagle carved upon it. This castle was besieged by the parliamentary forces in the great rebellion, and surrendered to them in the beginning of June, 1646.

Caernarvon was formerly a town of considerable note, and the chancery and exchequer for North-Wales were established in it. It is governed by the constable of the castle, who by virtue of his patent, is always mayor of the town; and subordinate to him are an alderman, two bailiffs, a town-clerk, and other officers.

The town, at present, though small, is neat, tolerably built and well inhabited, and there is good anchorage in the bay, the ferry which goes from hence to Anglesea, is called Abermenai ferry, whence there is a direct road to Holyhead. Caernarvon gives the titles of earl and marquis to the noble family of Bridges, for some successions, dukes of Chandos. The chief commodities here are corn and slate, and they ship off here yearly from twenty to thirty thousand bushels of different kinds of grain. The slates are of the blue kind, and being very light, are convenient for houses slightly timbered, and will endure the weather extremely well. Of these they send yearly to different parts of England and Ireland above four millions. Nor far off on the Anglesea side, they have plenty of lime stone and near Moel y Don, on the Caernarvonshire side, there is a large bed of a small beautiful grained white free-stone, which supplies all the artificers in this part of the world with whet stones; the hardest of it when used with oil, being little inferior to the Turkey oil-stone. They have fish here in great plenty, such as salmon, cod, and whittings; all sort of flat-fish, oysters, muscles, and cockles. They also ship off great quantities of butter, cheese, honey, and wax. There are several veins of lead ore, lately discovered near Snowdon-hill, not far from hence; and not many years ago a woollen manufacture was set up here, which it is thought will answer very well.

This town sends one member to parliament, has a weekly market on Saturday's, and four annual fairs, viz. February the twenty-fifth, May the sixteenth, August the fourth, and December the fifth, for cattle, and pedlars ware.

At Dolbadern, five miles east of Caernarvon, and under Snowdon-hill, are the ruins of a castle, of which there is only one tower now standing, and that not entire. These ruins are pretty large, and seem to have been an ancient British fort; the castle was given away from the crown by king William soon after the revolution.

Aberwingregin, not far from the above place, is only noted for having three fairs, all for cattle, namely, on August the eighteenth, October the twenty-fifth, and November the twenty-first.

Bettws, a village on the banks of the Conway, and on the borders of Denbighshire, about seventeen miles east of Caernarvon, is remarkable only for having two fairs annually for cattle, viz. May the fifteenth, and December the third.

Beddelert is a village seated to the south of Snowdon-hill, and thirteen miles south-east of Caernarvon; it has two fairs on August the sixteenth, and September the twenty-third, for cattle.

Penmorfa, a village about five miles to the southward of that last mentioned, has three fairs, viz. on August the twentieth, September the twenty-fifth, and November the twelfth, for cattle.

Clynogvawr is a village seated in the western part of the county, on St. George's channel, ten miles south of Caernarvon. St. Beans had this township given him by Gwiddeint or Guithin of the blood royal of Wales, about the year 616, and here built a Cistercian abbey, becoming himself the first abbot thereof. It was afterwards dedicated to him, and received favours

and possessions from several Welch princes; but has been long since demolished. The present edifice, which is in good condition, has been a collegiate church, once in great repute, consisting of five portionists or prebendaries, and continued so till the dissolution, when it was converted into a sinecure, rectory and vicarage endowed. The advowson was some time since given by the earl of Pembroke to Jesus College in Oxford, and the college at the same time obliged always to present their Principal to the rectory. There are two fairs kept here, on August the eighteenth, and September the twenty-third, both for cattle.

From hence we pursued our journey to the city of Bangor, or Banchor, two hundred and thirty-six miles from London; and though it is at present a mean town, it was anciently called by the Britons Bangor Vawr yn Gwyned, that is to say, Bangor The Great in North-Wales; it is in the northern part of the county, near the entrance of the Menai, which parts this shire from Anglesea. It is inclosed on the south by a very steep mountain, and by a hill on the north.

A bishoprick is thought to have been erected at Bangor, before the middle of the sixth century, by Malgwyn, or Malgo Conan, prince of North-Wales; though we find no certain footsteps of any bishop residing here till the reign of king Henry I. The first bishop is said to be Daniel, the son of Dinodus, abbot of Bangor, in Flintshire, who had before founded a monastery, or college here. The old church was burnt by Owen Glendowr, about the year 1404, and afterwards rebuilt in the reign of Henry VII. by Henry Dennis, its bishop. Upon the dissolution, the revenues of the bishopric were valued at one hundred and fifty-one pounds, three shillings, *per annum*. The whole length of the cathedral, which is now used for the parish church, is two hundred and fourteen feet, the cross aisle is near ninety-six feet long, and the tower sixty feet high. This fabric is kept in good repair, two thirds of the rectory of Llandinam being settled to support it; and there now belongs to the cathedral, a bishop, a dean, an archdeacon, a treasurer, and two prebendaries endowed, a precentor, a chancellor, and three canons not endowed; two vicars coral, an organist, lay clerks, choristers, and other officers.

Besides the cathedral, there is a palace belonging to the bishop, and a free school, which, so early as the year 1276, was an house of friars predicant; but in 1557, it was converted by Dr. Jeffery Glynn to its present use. It was formerly defended by a castle, built by Hugh earl of Chester, of which there are now no remains. Though the buildings are old and mean, the town is pretty well inhabited.

Here is a weekly market on Wednesday, and three annual fairs, viz. April the fifth, June the twenty-fifth, and October the twenty-eighth, all for cattle.

Llandlechyd, a small village about three miles from Bangor, has one annual fair on the thirtieth of October, for cattle.

About six miles south-east of the above village is Dolwyddelen, or "the castle of the valley of St. Helen's wood." It is thought to have been built by the Britons, about the year five hundred, on their first retreat into Wales. The structure is now in a very ruinous condition; only some parts of two of the towers are now standing; but the whole, from some vestiges still remaining, appears to have been of considerable extent. From this castle there is an ancient road extending to the sea-coast of Merionethshire, and called Sam Elen, of Helen's way, supposed to have been made by St. Helen, the mother of Constantine the Great.

During our stay among the lofty mountains of this shire, we were greatly diverted with seeing one of the marriage ceremonies of the rustic inhabitants: and as all these ceremonies are performed in a similar manner, the following description will give the reader a sufficient idea of the whole.

The bridegroom on the morning of the wedding, accompanied with a troop of his friends, as well equipped as the country will allow, comes and demands the bride. Her friends, who are likewise well mounted on their

merlins, or little mountain horses, give a positive refusal to their demands, whereupon a mock scuffle ensues between the parties. The bride is mounted on one of the best steeds, behind her next kinsman, who rides away with her in full career. The bridegroom and his friends pursue them with loud shouts. It is not uncommon to see, on such an occasion, two or three hundred of these merlins, mounted by sturdy Cambro-Britons, riding with full speed, crossing and jostling each other, to the no small amusement of the spectators. When they have pretty well fatigued themselves and their horses, the bridegroom is permitted to overtake his bride. He leads her away in triumph, as the Romans did the Sabine nymphs. They all return in amity, and the whole is concluded with festivity and mirth.

It is but justice to observe, that infidelity to the bed of Hymen, is scarce ever known or heard of in this country. Adultery is a weed that grows in the rank soil of a court, fostered by luxury and vanity.

Mankind form an untrue judgment from external appearances; those are esteemed virtuous, who have had their education in a boarding school or nunnery. We are persuaded, that the case is quite different. The greater number of shackles with which we fetter human nature, the more she strives to gain her native freedom. Forbidden pleasures are coveted, whilst those within our reach are neglected. The various methods of confinement in foreign countries, makes their taste for illicit pleasures more poignant, and incites them to run risks for their gratification. When you indulge them in the power, you in some degree take away the temptation to vice.

In the character of wives, the women of this country are laborious, industrious and chaste. In that of mothers, they nurture their robust offspring, not in sloth and inactivity, but enure them early to undergo hardships and fatigues.

Let the fair daughters of indolence and ease, contemplate the characters of these patterns of industry, who are happily unacquainted with the gay follies of life. Who enjoy health without medicine, and happiness without affluence. Equally remote from the grandeur and the miseries of life, they participate of the sweet blessings of content, under the homely dwelling of a straw-built cottage.

Nor are the ceremonies attending their funerals less singular than those of their marriages.

The evening preceding the burial, they have what they call Wyl-nos, i. e. the night of lamentation. All the neighbours attend at the house of the deceased, the the minister, or in his absence the clerk of the parish, comes and prays over the dead, and psalms are sung agreeable to the mournful occasion. This it may not unreasonably be supposed, is the remains of the Romish superstition of requiems for the souls of the deceased. However there is nothing improper in the custom if conducted with decorum and devotion, which is not always the case. At the funeral, the relations and friends of the deceased make presents, to the officiating clergyman, and the clerk of the parish. These offerings are altogether voluntary, generally proportionable to their circumstances, and the respect they bear to the memory of their departed friend. In some populous parishes, the offerings are very considerable, and constitute a great part of the profits of a living. There is no doubt but that this is likewise a relic of the Popish custom, of giving money to their priests for paying that the soul of the deceased may be released out of purgatory.

It is also a custom invariably observed to make a bonfire near every house on All-saints eve. Whether this was originally owing to public rejoicing, or some superstitious custom, is hard to say, as the country people could give us no information.

In one of our incursions among the snow-topped mountains of this county, we were overtaken with a violent storm, which seemed to threaten the dissolution of nature.

In this distressful situation we could only have recourse to the hospital shelter of the next impending rock.

Here we awaited with fear and impatience, till the storm was spent.

Either tropic now,
'Gan thunder; at both ends of heaven the clouds
From many a horrid rift abortive pour'd
Fierce rain with lightning mix'd, water with fire,
In ruin reconcil'd. Dreadful was the rack,
As earth and sky would mingle.

MILTON.

The thunder reverberated from rock to rock, and the whole artillery of heaven seemed to be at once discharged.

Amid Carnarvon's mountains rages loud
The repercussive roar. With mighty crush
Into the flashing deep, from the rude rocks
Of Penmaenmawr heap'd hideous to the sky,
Tumble the smitten cliffs, and Snowdon's heap
Dissolving instant, yields his wintry load.

THOMPSON.

When the storm was appeased, and the face of heaven had reassumed its wonted serenity, we continued our journey. Pleased, though fatigued with our excursion, we regained the homely dwelling, where we had for some days taken up our lodgings.

While we remained in this dreary situation, we were determined to amuse ourselves as much as possible. Accordingly we sent for a poor blind harper, and procured a number of blooming country girls to divert us with their music and dancing. There is something very plaintive and affecting in the Welsh music, and the manner of their singing symphonious and responsive to the notes of the harp, renders it exceeding melodious. It gave infinitely more pleasure to hear this rustic concert, than the finest airs of an Italian opera; and to see these rosy rural nymphs direct their mazy steps, without the needless sumptuous apparel of luxury and pride, than all the ladies at St. James's, in their artificial beauty and attire.

Having viewed every thing remarkable in the city and neighbourhood of Bangor, we passed on to Abbr-conway, a considerable town, situated on the river Conway, two hundred and twenty-nine miles from London. The castle is much older than the town, having been fortified by Hugh, earl of Chester, in the reign of William the Conqueror. But being afterwards almost demolished in the wars, it was rebuilt by king Edward I. and is still the admiration of all that see it. For situation, elegance, strength and grandeur, it is perhaps unrivalled. It is situated on a high rock above the sea, and moated on the land side. There are ten round towers in the castle, and four turrets that are considerably higher than the towers. The walls are battlemented, and are from twelve to fifteen feet in breadth. When we enter into the castle, we are struck with the view of a grand arched hall, with handsome niched windows. This hall is entire; it is a hundred feet long, thirty wide, and thirty high, and the roof supported by nine arches of stone. The external part of the castle remains entire, as in Edward I. time, except one tower, which has tumbled into the sea, by part of the rock giving way. On one side of the castle is a high hill, covered with a fine coppice of wood. On the other we have a prospect over the river of some considerable seats, which make a beautiful appearance. The whole town is surrounded by a wall; and so strongly fortified was this place, that before the invention of cannon, it must have been absolutely impregnable.

The town is large, surrounded by a wall, and delightfully situated on the side of a hill. It is governed by an alderman and two bailiffs, and had formerly a very considerable trade, which is now greatly diminished. Considerable quantities of corn, timber, and bark, are however still exported; and some necessary articles imported from Chester, and other seaports.

In the church-yard is a tomb-stone, on which is the following remarkable inscription: "Here lieth the body of Nicholas Hooke, of Conway, Gent. who was the one and fortieth child of his father, William Hooke, Esq. by Alice, his wife, and the father of twenty-seven children. He died the twentieth of March, 1637.

Conway has a weekly market on Friday, and four annual fairs, viz. April the sixth, September the fourth, October the tenth, and November the tenth, all for cattle.

In the year 880, prince Anarawd, gained a memorable victory near this place, over Eadred, the Saxon, duke of Mercia; and of which Mr. Robert Vaughan, in his notes on Dr. Howel's History of Wales, gives the following account:

"After the death of Roderic the Great, the northern Britons of Stratelwyd and Cumberland, were (as Hector, Boetius, and Buchanan relates) much infested and weakened with the daily incursions of Danes, Saxons, and Scots, which made all, that would not submit their necks to the yoke, to quit their country and seek out more quiet habitations. Under the conduct of one Hobert, they came to North-Wales, in the beginning of the reign of Anarawd; who, commiserating their distressed condition, gave them the country from Chester to the river Conway to inhabit, if they could force out the Saxons, who had lately possessed themselves of it; whereupon these Britons first engaged the Saxons; and necessity giving edge to their valour, soon drove them hence, being yet scarce warm in their feats. About three years after this, in the year 886, Edryd, the long haired king of the Saxons, called by the English historians Eadred duke of Mercia, made great preparations for the regaining of the said country; but the northern Britons, who had settled there, having intelligence of it, for the better securing of their cattle and goods, removed them over the river Conway; in the mean time prince Anarawd was not idle, but gathered together all the strength he could make. His army encamped near Conway, at a place called Kymryd, where he and his men making resistance against the assaults of the Saxon power, at length, after a bloody engagement, obtained a compleat victory. The Britons pursuing this advantage, chased the Saxons quite out of Wales into Mercia, where having burnt and destroyed the borders, they returned home laden with rich spoils. Anarawd, to express his thankfulness to God for this great victory, gave lands and possessions to the church of Bangor, and the collegiate church of Avon. After this, the northern Britons came back from beyond the river Conway, and possessed again the lands assigned them between Conway and Chester, which for a long time after they peaceably enjoyed. In the year 1185, Leweline ap Gervas, prince of North-Wales, founded an abbey here dedicated to the Virgin Mary, and All Saints, for Cistercian monks, but about the year 1282, the Monks were removed by king Edward I. to a monastery he had founded at Maynan, in Denbighshire, about three miles from hence.

About five miles south of Aberconway, stood the ancient Roman town called Conovium, by Antoninus, but now Caerken. A Roman hypocaust, or hot bath, was discovered here about the beginning of the present century. And opposite to Conovium, on the other bank of the river, stood the ancient city called Diganwy, which was set on fire by lightning some centuries ago, and burnt to the ground. It is supposed to have been the Roman city Dictum, where, under the later emperors, the commander of the Nervii Dictenses resided. About sixty years ago there were found at a castle here, or near it, several brass instruments in the shape of axes, but whether British or Roman, it is hard to say, or what use they were designed for. There were about fifty of them found under a great stone, placed heads to points. They were by some supposed to be the military weapons of the ancient Britons, before they knew the use of iron and steel. These instruments

are generally called Celtes, and have by many been conjectured to be the heads of the axes and falce carried by the Roman Licitors; though others take them rather to be instruments used in war, and imagine the Romans possessed the secret of hardening brass to such a degree, as to make it proper for the uses to which steel is.

From Aberconway, there are two roads which lead to Beaumaris-ferry; the one, which is something the nearest, is over the Levan sands, but can only be passed at low water, and is therefore extremely dangerous. It leads directly to Beaumaris-ferry; but those who chuse to pass it, are obliged to be very exact in taking advantage of the ebb of the tide; for if it should return before they have crossed these dangerous sands, they are infallibly lost, and many have been drowned for not attending sufficiently to this precaution. The other road leads over Penmanmaur, and joins the former at the ferry.

Remarks on the SEA-COASTS of the Shires of MERIONETH and CAERNARVON.

The mouth of the Dyffi, is navigable some miles from its mouth; but not much frequented. About six miles north-west of the mouth of the Dyffi, is Sarnabury point, before which is a dangerous ledge of rocks called Clary, extending a mile and a half on the shore. This point is the southern cape of a pretty large bay, where ships anchor in safety in northerly and easterly winds. The depth of the water is various from two to fifteen fathoms. But there is no shelter here for ships in southerly and south-west winds.

In the shire of Caernarvon, there are several bays where ships may ride safely. Crickieth bay has a sufficient depth of water, and is sufficiently capacious for holding a large number of vessels; and some of considerable burthen pass up to Crickieth. The bay of Pulheli is still larger, and a large fleet of ships may safely ride in northerly winds, the water being from five to fifteen fathoms deep, and the bottom an oozy sand. Near the western cape of this bay are two small islands called Stidwal isles, between which, and the main lands ships frequently come to an anchor in five fathoms water, and are there sheltered from all winds. Coasting vessels of fifty or sixty tons burden pass up to the quay of Pulheli.

Three miles to the westward of Stidwal islands is Ruellan bay, which affords shelter to ships in northerly winds. But Aber Daron, another large bay, about four miles to the westward of that of Ruellan, is much more frequented, being situated near Braichy-y-Pill, the extremity of this promontory. At the eastern point of Aber Daron bay, are two small islands called Gwilyn.

About two miles to the westward of Braich-y-Pill, is Barsfey island. It is about two miles in length, and one in breadth. Ships sometimes pass through the channel between Barsfey island and the main land; but as there are several rocks in the passage, it is better to pass to the westward of the island, unless the master be very well acquainted with the coast.

On the north side of this promontory is Newyn, situated at the bottom of a bay of the same name, where ships of considerable burden may ride safely in southwardly winds. The cape a little westward of Newyn, is called Porthdinlleyn-head, and forms the western point of Caernarvon-bay, where ships ride safely in easterly and southerly winds.

About fifteen miles to the north-east of Porthdinlleyn-head, is the entrance of the straits of Meneu. The sands extend to a considerable distance from each shore, so that the passage at low water is not above half a mile in breadth; and between these sands is a bar of sand and beach thrown up by the

sea, on which there is not above nine feet at low water. But after passing, the water deepens to five, six, or seven fathoms, and the streight becomes above a mile in breadth. The mouth of the Seiont, on which the town of Caernarvon is situated, is navigable some miles above that town. Here is also a passage over to the island of Anglesea, called Abermenai ferry.

There is a small harbour for boats at Bangor; and on the sands before that city, there is a large weir, where large quantities of fish are taken. About two miles to the eastward of Bangor, is the road over the sands, where passengers cross the streight in boats to Beaumaris. The Levan sands, along which the lower road from Conway passes, are very large; extending in some places three or four miles from the shore. All these sands are dry at low water; but being very flat, the tide flows over them with such rapidity that passengers often find it very difficult to escape; especially as the foot or Pen-man mawr, is surrounded with small rocks, which render

it at once both dangerous and troublesome to reach the shore.

The mouth of the river Conway is of sufficient breadth to receive a large fleet of ships; but the water is not above six feet deep, at low water, on the bar, which stretches across the entrance of the river. There also lies a large shoal, called Conway-sands, in the mouth of the harbour, which renders the passage not more than half a mile in breadth. But after passing the bar, it is much broader, and continues sufficiently wide to Aberconway. It is navigable several miles above the town, but not often used, there being no place of note upon either of its banks, above Aberconway.

MEMBERS of PARLIAMENT for the county of Caernarvon.

This county sends two members to parliament, one knight of the shire, and one burges for the borough of Caernarvon.

ANGLESEA.

A N G L E S E A.

THIS island was known to the Romans by the name *Mona*, from the British name *Mon*, and *Tir Mon*, or the Land of *Mon*; but whence the name *Mon* was derived does not appear. The ancient Britons called it also *Ynys Dowylh*, or the Shady island, from its having been anciently covered with woods and forests; and by the Saxons it was called *Moneg*, from the British name *Mon*. It obtained its present name in the reign of king Edward I. when it was conquered by the English, who called it *Englesea* and *Anglesea*, the English island.

This county is an island in the Irish sea, and is separated on the south-east from Caernarvonshire, and the continent of Britain, by a narrow strith or streight called *Menai*, or *Meneu*, which in some places is fordable at low water. The figure of the island is extremely irregular; its length from east to west is thirty miles, its breadth from north to south twenty-six, and its circumference is about seventy miles. It is divided into six hundreds, in which are two market towns, seventy-four parishes, about one thousand eight hundred and forty houses, and twelve thousand inhabitants. It lies in the province of Canterbury, and diocese of Bangor; and Beaumaris, the county town on the island, is two hundred and forty-one miles from London.

The ancient inhabitants of all North Wales, including the island of *Anglesea*, were called by the Romans, *Ordovices*, and of whom frequent mention is made in all the histories that describe the British wars. They were a hardy, vigorous, warlike people, and were the last of the British tribes that were conquered first by the Romans, and afterwards by the English. They are still more purely British, than those of South-Wales. Like the clans of Scotland, or the Hebrew tribes, they seldom marry but with those of their own lineage; they are all cousins, and many of them of the same name.

If you ask them how they spend their lives in this sequestered part of the world, they answer, we drink, dance, and are merry. Perhaps there are few people so much addicted to mirth. It is natural to think that the complexion of their country was not calculated to inspire such sentiments of festivity and joy. They sing, dance, and drink, not by hours, but by days and weeks; and measure time only by the continuance of their mirth and pleasure.

The men estimate their strength not by feats of activity, as in other places, but by the quantities of ale they can drink; and, we were told, it is no uncommon thing for a lover to boast to his mistress, what feats he has performed in this way. Such is the mark of prowess by which the women judge of their paramour's vigour and strength of constitution.

From hence we may conclude, that Bacchus does more execution in this country, than Mars does in Germany. Such, whose happy poverty preclude them from procuring those liquors, which are the destruction of the more opulent, live to an advanced age; whilst most of the gentry and squires are carried off in their youth: thus the heir does not long wait for the possession of his estate, nor does he long enjoy it. This vice is hereditary in families, and descends from father to son.

Unembarrassed with the pedantry of learning, and the disgusting forms of politeness, the rustic inhabitants of these mountainous parts are free, hospitable and cheerful. Let them enjoy their mirth unrivalled, and undisturbed by foreigners, in security and ease. They always

will remain unenvied in the participation of that happiness, which none but a native of that country can feel.

The Welsh language is here spoken with the greatest classical purity. Here they boast of their Welsh bards, who are poets by nature. These bards are idle fellows, who subsist on the bounty of the Welsh gentry. They, and their allies the harpers, who form a very numerous corps, are generally invited to entertain the company at their feasts, which is done by buffoonery and illiberal abusive extempore rhyme. Sometimes a bard comes to the door, and demands admittance in rhyme; he is answered by the bard within, in rhyme likewise; if the stranger, in the opinion of the company, gains the victory in this poetical contest, he is admitted to partake of the feast, while the vanquished bard is turned out to the former's uncomfortable situation.

Somewhat similar to this was the great feast which was made in South-Wales, where bards from various parts were invited to a poetical combat, and where it is said the North-Wales poets gained the victory.

This vagabond poetical tribe, were formerly a great nuisance in this country, and we find divers acts of parliament and regulations made to suppress them. It is said that Edward I. cruelly destroyed them; it may be doubted whether it was not the greatest benefit he could do to the country. In the time of Henry IV. it was enacted, that, "No westours, rymours, minstrels, or other vagabonds, should go about pur faire *Kymortha* ou *coilage*." The learned author of the observations on the ancient statutes, has mistaken the meaning of the word *Kymortha*, or rather *Cymortha* (the C in Welsh having the sound of the English K) it signifying a charitable aid or support. This is the signification it has in the act of twenty-six Henry VIII. where it is enacted, that, "No one without licence of the commissioners, shall *Kymortha* under colour of marrying, singing first masses, &c."

Cymortha is a word frequently used in Wales at this time. A poor new-married couple often go about the country to get something to begin the world, as they call it. On these occasions they have generally wool and corn given them, which they call *Cymortha*.

The wants of mankind, in an infant state of society, are few, their ideas are few, and consequently, the sounds expressive of such ideas are also few. At first, capable only of simple apprehension, we, by degrees, form abstract and complex ideas. The language of societies is not formed in a day; it is the work of ages. Words are daily borrowed, and transformed according to the present exigency; and even coined, when necessity requires it, though the common consent of mankind alone can render them current.

As this people have made no very considerable progress in a state of civiliation, we might naturally be induced to think that their language is barbarous and uncultivated; but the contrary is true. It is not clogged with those many inharmonious monosyllables, the signs of moods, tenses, and cases, as the English language. It is much more harmonious and expressive in its numbers and formation; one word in Welsh frequently expressing as much as a sentence in the English; of which a late ingenious writer has given abundant specimens.

Though this is the language of a people, who inhabit a small barren spot of earth, scarce known in the world; unimproved in the arts of life, entirely neglected and uncultivated; and not spoken, except by such who

willingly forfeit every claim to politeness; yet its variety, copiousness, and even harmony, is to be equalled by few, perhaps excelled by none.

But our wonder ceases, when we consider that it is not solely the language of a people confined in a little corner of this island. It is the language of populous, and even civilized nations, the ancient Celts. Hence its variety and its harmony. It is the language of a brave people. Hence those sounds that roused the soul to action. Animated by these, they despised danger and death for their country.

Thus some account for the policy of Edward I. who, in order to enslave the people, thought it a necessary previous step to destroy the bards, who cultivated their language and poetry.

This language seems to be more particularly adapted for poetry; which, however extraordinary it may seem to some, on account of the multiplicity of gutturals and consonants with which it abounds, has the softness and harmony of the Italian, with the majesty and expression of the Greek. In the formation of its poetical numbers, it differs from all modern languages. Every line consists of a certain number of regular feet, like other languages, and at the same time has a certain kind of rhyme, jingle, or alliteration, not terminating the line, but running through every part of it.

The poets, or rather those who pretend to be such, arrogate to themselves a most unwarrantable poetical licence of coining words, for the sake of the rhyme or jingle. Hence the greater part of their poetry is nothing more than melodious nonsense; a perfect jargon of harmonious sounds; and can hardly be translated into common sense. But though this unbounded poetical licence be generally, yet it is not universally adopted. There are many poets who never have recourse to this unwarrantable practice of coining words.

We have added a translation of an old Welsh poem, as an amusement to our readers.

A Fragment of a Welsh Poem.

“ Fair and fragrant are the blossoms of summer, which grow on the flowery banks of Hafren; bright shineth the sun after the clouds and tempests are dispelled; fairer and brighter is the beauteous shining branch of Llewelin, the snow-coloured Gwendolen.

“ Her fair form animated the warriors on the marsh of Rhyddlan, when the heroes of Lloegr breathed destruction on the valiant sons of Cymry. Then fell the brave, the valiant son of Gryffydd, by the ruffian hands of the bloody Saxon, in the sight of his beloved Gwendolen.

“ The fair wept for the fall of her beloved hero, she kissed his clay-cold corse, but the purple flood of life was gone — — — — —

O ye fair maids of Cymry, bemoan in plaintive songs the fall of the beloved chief; and ye blooming youths, the descendants of the brave Cadwallader, lament the fair Gwendolen, for she survived not her lover. — — — — —”

Paulinus Suetonius was the first who attempted to reduce the island of Anglesea to the Roman yoke, in the reign of Nero, when, according to Tacitus, it was a very populous country.

Accordingly, he passed his troops over the streight Menai, having prepared flat-bottomed boats for that purpose, being ignorant of the depth. Some of his cavalry, however, waded through it, and others swam over, holding their horses bridles in their hands. The inhabitants, inspired by the Druids, waited to receive them, in good order, and with great firmness; among them were women, attired like furies, who ran up and down with lighted torches in their hands, their hair dishevelled, hanging about their shoulders, and surrounded by the venerable Druids, who, with hands lifted to heaven, uttered the most dreadful imprecations. A fight, which had somewhat so awfully attending, at first put the Romans to a stand, who were sufficiently superstitious themselves; they continued some time like trees, and made little resistance. At length, however, animated by their general, who repre-

sent to them the shame and disgrace of being thus terrified by a rabble of frantic women and priests, they advanced their ensigns, and soon vanquished their opposers, thrusting them into their own fires. They then left a garrison upon the spot, and cut down the groves consecrated to their superstitious rites.

The author of *Mona Antiqua Restaurata*, thinks there are probable grounds to suppose the field of battle to be near Porthamel, betwixt a place called Pwll y fuwch, and Llaniden. Near it, he adds, are the ruins of two or three small British towns, which, in all likelihood, were then demolished; and in one of these, Caer Idris, on the top of Gwydryn hill, it is probable the Romans built their fort (it being a place of strength, and conspicuous to the whole island) and in it placed their garrison. It is a Roman work in the form of a half moon, guarded by a triple wall, and defended on the back by a precipice.

The Romans afterwards abandoned the island, on account of a general revolt in Britain; but it was recovered again by Julius Agricola, without bloodshed. The part of the strait the Romans are supposed to have passed over, is between Lhan-vair is Gaer, in Caernarvonshire, and Lhan-Idan, in Anglesea; and opposite this passage, on the north side of Newburgh, is a hill with two summits, called Guidrin, on one of which are the ruins of an ancient fort, supposed to be Roman; and on the other, a pit sunk in the rock, about nine feet diameter, filled up with pure sand; but what it was designed for is uncertain. About a mile from the passage, are Tre'r Druw, and Tre'r Beirdd; i. e. *Druid's-Town*, and *Bard's-Town*; near which is a square fortification, probably one of the first works of the Romans after their landing there. At no great distance from this fort is a round British fortification, of a considerable height; supposed to be erected by the inhabitants, to defend them against the Roman invaders.

This island has undergone various revolutions, since it was finally abandoned by the Romans, of which there are no distinct accounts extant. All that we can ascertain is, that it was invaded by the Irish, by the Anglo-Saxons, and by the Norwegians; and that king Ethelred sailed round the coast in the year 1000, and plundered the inhabitants. In the year 945, a battle was fought, between Howeldha, king of Wales, and a man called Edwal Voel, wherein Kynan was vanquished; after which Gruffydd, his son, renewed hostilities, and was likewise defeated. Next, Kyngar, a powerful man, was driven out of the island; who was the last enemy Howeldha had to cope with.

The country was already oppressed by Hugh earl of Chester, and Hugh I. of S. p., about the year 1098, who, to keep it in subjection, built the castle of Aber Lhienawg; but Magnus, the Norwegian, coming to the island, about the same time, shot the earl of Chester through the body with an arrow, pillaged, and forsook it. The English afterwards attempted several times to reduce it, but unsuccessfully, till the reign of Edward I. when it was entirely subdued, and annexed to the crown of England.

As Anglesea was the principal seat of the antient British Druids, whose religion, ceremonies, and customs, have so long employed the researches of our most skilful antiquaries, and in a very particular manner those of the learned author of *Mona Antiqua Restaurata*, it will not be foreign to our survey of this island, to give a more particular account of that remarkable sect, their ceremonies, customs, and doctrines.

The antiquity of the Druids is esteemed equal to that of the Brachmans of India, the Magi of Persia, and the Chaldees of Babylon. And whoever considers the surprising conformity of their doctrine, will find sufficient reason to think that they all derived it from the same hand, we mean from Noah and his immediate descendants, who carried it with them at their dispersion; for it cannot be supposed that the British druids derived their doctrine from any foreign sect, to whom they were absolutely unknown.

But the druids were not contented with the power annexed to the priesthood; they introduced religion into every

every transaction both public and private, so that nothing could be done without their approbation; and by this means their authority was rendered almost absolute. They elected the annual magistrates of every district, who should have enjoyed, during that term, the supreme authority, and sometimes the title of kings; but they could not even call a council without their approbation and advice: so that, notwithstanding their pretended authority, they were in reality the creatures and slaves of the druids.

They exercised the same arbitrary power in their courts of justice; and whoever refused to submit to their decisions, were excluded from the public sacrifices, which was considered as the greatest punishment that could be inflicted. It must however be acknowledged, that their administration of justice has always been celebrated for its impartiality. The sole management and instruction of youth was also committed to them, except the training them up in the art of war; for both they and their disciples were not only exempted from going to war, but likewise from all kind of tribute.

Their garments were remarkably long; and, when employed in religious ceremonies, they always wore a white surplice. They generally carried a wand in their hands, and wore a kind of ornament enchased in gold about their necks, called the druid's egg. Their necks were likewise decorated with gold chains, and their hands and arms with bracelets: they wore their hair very short, and their beards remarkably long.

They were all subordinate to a chief or sovereign pontiff, styled the arch-druid, chosen from among their fraternity by a plurality of voices; but, in case of a competition too powerful to be decided by a majority, the contest was determined by the sword. He enjoyed his supremacy for life, had power to inspect the conduct of kings, and either to elect or depose whenever he pleased.

It was one of the maxims of their religion, not to commit any thing to writing; but deliver all their mysteries and learning in verses composed for that purpose; and these were in time multiplied to such a number, that it generally took up twenty years to learn them all by heart. By this means their doctrines appeared more mysterious by being unknown to all but themselves; and having no books to recur to, they were the more careful to fix them in their memory.

But what had still a more direct tendency to impose on the public, was their pretended familiar intercourse with the gods. And, in order to conceal at once their own ignorance, and render the imposition less susceptible of detection, they boasted of their great skill in magic, and cultivated several branches of the mathematics, particularly astronomy. The latter they carried to some degree of perfection; for they were able to foretel the times, quantities, and durations of eclipses; a circumstance which could not fail of attracting reverence from an ignorant multitude, who were persuaded that nothing less than a supernatural power was sufficient to make such astonishing predictions: they also studied natural philosophy, and practised physic.

Before we conclude this account of the Druids, we must observe, that the fair sex enjoyed a part of the priesthood; and were considered as endowed with the spirit of prophecy. They assisted the Druids at their religious functions; and some of them became very famous for the great progress they made in different branches of learning.

The next order in great esteem among them, was that of the bards. Some writers indeed have confounded these with the Druids, but this is a mistake; they had their name from their office, which was to chant hymns in concert at their periodical festivals, and celebrate the praises of their heroes. These songs were accompanied with musical instruments, and considered as the dictates of their gods; so that it is no wonder the bards were held in the highest esteem. It is even said, that they could at any time put a stop to a whole army's engaging by their interposition: so great was the power of the muses over a barbarous multitude!

They worshipped the Supreme Being under the name of Esus, or Hesus, and the symbol of the oak; and had

no other temple than a wood or grove, where all their religious rites were performed. Nor was any person admitted to enter that sacred recess, unless he carried with him a chain, in token of his absolute dependence on the Deity. Indeed, their whole religion originally consisted in acknowledging that the Supreme Being, who made his abode in these sacred groves, governed the universe, and that every creature ought to obey his laws, and pay him divine homage.

They considered the oak as the emblem, or rather the peculiar residence of the Almighty; and accordingly chaplets of it were worn both by the Druids and people in their religious ceremonies, the altars were strewed with its leaves, and encircled with its branches. The fruit of it, especially the mistletoe, was thought to contain a divine virtue, and to be the peculiar gift of heaven. It was therefore sought for on the sixth day of the moon with the greatest earnestness and anxiety, and when found was hailed with such raptures of joy, as almost exceeds imagination to conceive.

As soon as the Druids were informed of this fortunate discovery, they prepared every thing ready for the sacrifice under the oak, to which they fastened two white bulls by the horns: then the Arch-druid, attended by a prodigious multitude of people, ascended the tree, dressed in white, and with a consecrated golden knife, or pruning-hook, cropped the mistletoe, which he received in his sagum or robe, amidst the rapturous exclamations of the people. Having secured this sacred plant, he descended the tree, the bulls were sacrificed, and the Deity invoked to bless his own gift, and render it efficacious in those distempers in which it should be administered.

The consecrated groves, in which they performed their religious rites, were fenced round with stones, to prevent any person's entering between the trees, except through the passages left open for that purpose, and which were guarded by some inferior druids, to prevent any stranger from intruding into their mysteries. These groves were of different forms, some quite circular, others oblong, and more or less capacious, as the numbers of votaries in the districts to which they belonged, were more or less numerous. The area in the center of the grove was encompassed with several rows of large oaks set very close together. Within this large circle were several smaller ones surrounded with large stones; and near the center of these smaller circles, were stones of a prodigious size, and convenient height, on which the victims were slain, and offered. Each of these being a kind of altar, was surrounded with another row of stones, the use of which cannot now be known, unless they were intended as cinctures to keep the people at a convenient distance from the officiating priest. Nor is it unreasonable to suppose, that they had other groves appointed for secular purposes, and perhaps planted with oaks as the others were, that the sacred trees might strike the members of such courts and councils with awe, and prevent all quarrels and indecent expressions.

While the religion of the Druids continued pure, and unmixed with any foreign customs, they offered only oblations of fine flour sprinkled with salt, and adored the Supreme Being in prayers and thanksgivings. But after they had for some time carried on a commerce with the Phœnicians, they lost their original simplicity, adored a variety of gods, adopted the barbarous custom of offering human victims, and even improved on the cruelty of other nations; using these unfortunate mortals for the purposes of divination, with such barbarous cruelty, as is shocking to human nature to relate. Practices like these soon rendered them so deaf to the voice of humanity, that on extraordinary occasions they erected a monstrous hollow pile of osier, which they filled with these unhappy wretches, and burnt them to their gods. Criminals were indeed chosen for this barbarous sacrifice; but in want of these, the innocent became victims of a cruel superstition.

Temples they had none before the coming of the Romans, nor in all probability for a long time after: for with regard to those vast piles of stones still remaining, they seem rather to have been funeral monuments

than places of worship; especially as all the ancient writers agree that their religious ceremonies were always performed in their consecrated groves. Accordingly Tacitus, speaking of the descent of the Romans, tells us, that their first care was to destroy those groves and woods which had been polluted with the blood of so many human victims.

One of the chief tenets taught by the Druids was the immortality of the soul, and its transmigration from one body to another; a doctrine which they considered as proper to inspire them with courage, and a contempt of death. They also instructed their disciples in several traditions concerning the stars and their motions, the extent of the world, the nature of things, and the power of the immortal gods. But as they never committed any of their tenets to writing, in order at once to conceal their mysterious learning from the vulgar, and exercise the minds of their disciples, the greatest part of them are now irrecoverably buried in the lake of oblivion.

We have already mentioned, that in their sacred groves were several large stones, supposed to be the altars on which they offered their victims. Some of these stones are still remaining, and are of such an amazing magnitude, that the bringing and rearing them was thought by the superstitious to have been the work of those dæmons supposed to attend on that manner of worship.

At Tre'r Druw is one consisting of upright stones, in form resembling an horse-shoe, including an area of twenty paces diameter, and was, in the opinion of Borlase, the learned and very discerning author of the history and antiquities of Cornwall, a theatre, erected by the Druids, for the exhibition of plays, or somewhat like them, there having been seats and benches in the circular part of it, to accommodate the spectators. These stones are twelve in number, each twelve feet high, and eight broad. This monument is called Bryngwin, or Supreme-court; and sometimes Kerig y Bringwin, or Brin-gwin stone. Some, and perhaps with yet more probability, have conjectured it was intended for a temple; and Mr. Mason probably had it in his thoughts, when he thus painted the Druids temple in his Caractacus.

Behold yon oak,
How stern he frowns, and with his broad brown arms
Chills the pale plain beneath him: mark yon altar
The dark stream brawling round its rugged base,
These cliffs, these yawning caverns, this wide circus,
Skirted with unhewn stone . . .
These mighty piles of magic planted rock,
Thus ranged in mystic order, mark the place
Where but at times of holiest festival
The Druid leads his train. There dwells the seer
In yonder shaggy cave on which the moon
Now sheds a side-long gleam. His brotherhood
Possess the neighbouring cliffs . . .
Mine eye descries a distant range of caves
Delv'd in the ridges of the craggy steep:
And this way still another. On the left
Reside the sages skilled in Nature's lore:
The changeful universe; its numbers, powers,
Studious they measure, save when meditation
Gives place to holy rites: then in the grove
Each hath his rank and function. Yonder grots
Are tenanted by Bards, who nightly thence,
Rob'd in their flowing vests of innocent white,
Descend, with harps that glitter to the moon,
Hymning immortal strains.

R I V E R S.

The principal rivers of this island are, the Brent, and the Keveny.

The Brant rises about three or four miles westward of Beaumaris, and running south-west, falls into the Menai, east of the market-town of Newburgh.

The Keveny issues from a high hill, near a village called Coydana, about ten miles north-west of Beaumaris; and running south-west, and being joined by a

small river called the Ghent, falls into the Irish sea west of Newburgh.

The less considerable streams of this island are, the Alow, the Dudas, and the Geweger.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of this island is esteemed healthy, except in autumn, when it is frequently foggy, and apt to produce agues, and other disorders that arise from a cold vapid air. The soil, though it appears rough, being stony and mountainous, is so fruitful in corn and pasture, that the Welsh, in their language, call it Mam Gymry, the mother or nurse of Wales.

Most parts of the island of Anglesea yield honey, wax, tallow, hides, woollen and linen cloth: but the chief trade is in corn and cattle. It was observed above an hundred years since, that this island sent three thousand head of cattle yearly to the English markets; at present they send above fifteen thousand; five thousand hogs, and a great number of sheep. After all the fairs are over, it is computed they have a stock of cattle of at least thirty thousand. They feed on short grass, which renders the beef solid and sweet, and very proper to victual ships for long voyages. This island likewise abounds with fish and fowl, and in several parts of it are found great plenty of excellent mill-stones and grind-stones.

M A R K E T T O W N S.

The market-towns are, Beaumaris and Newburgh.

We crossed the strait of Menai at Beaumaris, the principal town in this island. It derives its name from the French word Beau maris, which signifies a fine marsh or moor; and is very descriptive of the situation of this town, being in a moorish spot, by the sea-side, on the western bank of the Menai.

It is a handsome, well built town, two hundred and forty-one miles from London; and consists chiefly of two very good streets. It was built by king Edward I. who fortified it with a strong castle; but by the ruins, it does not appear to have been ever equal to those of Caernarvon and Conway in point of beauty, though perhaps not inferior in strength. This being a corporation town, it is governed by a mayor, recorder, two bailiffs, and twenty-one common-councilmen, called burgeses, a town-clerk, and two serjeants at mace. The mayor, recorder, and bailiffs, are justices of the peace; and here the great sessions for the county, the county court, and the quarter-sessions, are held.

Before Liverpool became so great a mart, this place carried on a considerable trade, which it has now entirely lost; and is of course at present in a declining condition; but having an excellent and well situated harbour, it might still recover its former flourishing state, had the inhabitants a turn for commerce; but, on the contrary, their attention is fixed on agriculture, and a traveller must be surprized, when he observes, here and there, in this island, small spots of land cultivated on the side of a steep hill, where it would seem impossible for an horse to ascend, or, when he gets to the top, to plough land that has so great a slope: but the furrows extend along the sides of the hills, and not upwards and downwards; for was this to be attempted, plough and horse would both tumble to the bottom. This remark holds true, not only with respect to the isle of Anglesea, but to North-Wales in general; and it is a pleasing sight to see the corn waving on high, encompassed above and below by a mixture of bare rocks, weeds and shrubs, which, added to a fine green lawn before the town, from whence there is a charming prospect of the Caernarvonshire mountains, with a haven of the sea, renders this place truly delightful. Here is a handsome church, and a county jail. This town sends one member to parliament, has two weekly markets, held on Wednesdays and Saturdays, which are well supplied with corn butter, cheese, fish, and all other kinds of provisions; and four annual fairs, viz. February the thirteenth, Holy-Thursday, September the nineteenth, and December the nineteenth, all for cattle.

At Priestholm island, which lies almost close to the shore, about five miles distant, north, they have birds of passage, called Puffins, which are pickled and sold at a considerable price; and numbers of them are conveyed even to London, where they are esteemed a delicacy.

Baron-hill, the seat of lord Bulkeley, is situated upon an eminence, about half a mile distant from Beaumaris. The house itself has nothing in it that deserves much admiration; but it commands an extensive and very beautiful prospect; and the situation is far preferable to any in Wales.

We likewise visited the seat of Sir Nicholas Bayly. It is built in the Gothic stile, with great elegance and state. Its situation on the banks of the Menai, with a prospect of the mountains at a distance, renders it the admiration of all who see it.

At Penmon, to the north-east of Beaumaris, and in its neighbourhood, are quarries of mill-stones of the grit kind, great quantities of which are exported: also a good harbour for shipping, a considerable herring fishery; and oysters, which are fat, large, and remarkably fine, when pickled.

Penmon priory was a house for minor canons of the order of St. Augustine, dedicated to St. Mary, and founded by Gwynedd, king of the Britons, in the year 540. The prior was one of the three spiritual lords of Anglesea, and the yearly value, at the dissolution, was forty pounds seventeen shillings and nine-pence halfpenny. The ruins are still to be seen near Penmon.

Leweline ap Iorwerth, prince of North-Wales, before the year 1210, founded a monastery of friars minors, dedicated to St. Francis, at Lhanvaes, or Lhanddwyn, near Beaumaris, to which there belonged a large tract of land; but, except one small tenement, it is now all covered with sand hills, and lying on the Irish sea, is a noted land-mark for seamen. A prince of the same name founded, before the year 1221, a priory of black monks, at Priestholm, dedicated to St. Mary, and valued, upon the dissolution, at forty-seven pounds fifteen shillings and three-pence *per annum*.

Llanerchymeadd is a village, thirteen miles north-west of Beaumaris, which has four fairs, held on February the fifth, April the twenty-fifth, May the sixth, and the Thursday after Trinity, all for cattle.

Red-wharf is a bay and harbour, five miles to the west of Beaumaris, and is noted for the lime-stone trade carried on to all the neighbouring countries, among which is plenty of grey marble that will bear a fine polish. Near it are also remarkable quarries of mill-stones, of the grit kind, which are exported; and in the neighbourhood are large, loose blocks of grey marble; one of which, upon examination, was three feet thick, nine broad, and twenty-seven long. Properly cut, they would make excellent pillars for building. This bay also furnishes rich sand for manure, which is conveyed in small sloops round all the coast of Anglesea, and so fertilizes the land, that it yields large crops of oats and barley. Here are also plenty of herrings in the season, which bring the inhabitants considerable profit.

Dulas is a bay and harbour much frequented on account of the corn and butter trade, and the herring fishery, the mouth of which is on the north-side of the island, thirteen miles north-west of Beaumaris. Here is plenty of a reddish ockery earth, somewhat like Spanish brown, but bears a far better body. Veins of lead ore have also been lately discovered. On all this coast they make fern ashes, which are sold to soap-boilers, glass and smelting houses.

From Beaumaris we travelled through the whole extent of the county; till we came to Holy-head. Our journey was rather unpleasant, the roads in this part being very bad; our horses sunk into the clay, so that it was with the utmost difficulty we travelled. But the turnpike roads in this county, are not inferior to any in the kingdom. During our whole day's journey, we scarce saw a tree, or a gentleman's seat. The face of the country affords a disagreeable and melancholy prospect, though the land is said to be rich and fertile.

Holyhead, is situated in a peninsula at the western extremity of the island, opposite to Dublin, noted for being the station of the packet-boats between England

and Ireland, and principally consisting of houses of entertainment, for persons bound either to or from that kingdom, which make but an indifferent appearance, and are scattered up and down in a disorderly manner. It is however a place of considerable resort, populous, and in a flourishing state.

This town is called Caer Gybi, in Welch, from Kybi, a holy man, who lived about the year 650, and here ended his days. He founded a collegiate church, and the president of the college was one of the three spiritual lords of Anglesea. The walls of the church-yard are the remains of a British fortification, built in the year 450. The church was re-built in, or soon after the reign of king Edward III. and is at present an handsome structure. Here was also a castle, with a royal free chapel, valued at twenty-four pounds per annum, at the dissolution.

There was a salt-house at the entrance of Holy-head harbour, erected in consequence of an act of parliament made in the sixth year of the reign of queen Anne, to permit the inhabitants the use of rock salt, to strengthen the sea water; but for want of proper management it fell to decay, and at last came to nothing. In this harbour, in the year 1747, there were shipped twenty-two thousand bushels of all sorts of corn. The other commodities of Holyhead are butter, cheese, bacon, wild fowl, of which there is great plenty; oysters, lobsters, crabs, razor-fish, herrings, cod-fish, whittings, whiting-pollacks, coal-fish, sea-tench, turbot, soles, flounders, skate, thornbacks, &c.

The plant called in Welsh Grimnion, and by the English Tang, grows on the sea rocks, near this harbour, of which the inhabitants make a great advantage, by burning it to a fixed salt, called Kelp, which is used in the manufacturing of glass, and in the allum works. Samphire, so well known for making an excellent pickle, grows upon the rocks and the coast.

In the neighbourhood of Holyhead, is a large vein of white fuller's earth, and another of yellow, which lying so near the sea might be easily exported to distant parts. Within a mile of the town, on a hillock, near the road leading to Beaumaris, is a monument, consisting of large stones, about twenty in number, and between four and five feet high, except two at the northern end, which are six feet in height. They stand in a farm called Trevigneth, and have no other name than Lhecheu, whence the field in which they are erected is called Caer Lhecheu.

Llanvaier, a small village, is situated where the two roads from Beaumaris and Newburgh to Holyhead meet, and about six miles south east of the latter. Some workmen digging a well on the premises of one Mr. Jones, an inhabitant of Llanvaier, about the middle of March, in the year 1764, found an earthen pot, or Urn, containing twenty pieces of copper Roman coin, nineteen of which were of the emperor Ceraufius, and one of Alectus.

Two miles from the north-west point of Anglesea, and about nine miles north of Holyhead harbour, is a small island called Skerries. Upon this island a light-house is erected, the light of which may be seen at the distance of seven or eight leagues, and is of great use to navigators. The birds called Puffins, breed here in great numbers; a flock of them comes annually, all in one night, and depart in the same manner, at the proper season of the following year. Sea-tenches, and variety of other fish, are here in great plenty, some of which are taken by angling, from the cliffs of the rocks; and in the summer time coal-fish abound so, that the men belonging to the light-house stand upon the point of the rock and frequently take them up with baskets, as they are passing by.

Arefraw, on the south-west side of the island, twelve miles south-east of Holyhead, was formerly a considerable place, the residence of the princes of North-Wales, who were sometimes called kings of Aberfraw: curiosity induced us to view this seat of the ancient British princes, but how much were our expectations disappointed. It is a little country village, without any remains of grandeur, or monuments of antiquity that we could discern.

We were told, that part of the wall of the king's palace was converted into a barn. It is astonishing how the princes of North-Wales could have chosen such a situation for their residence; eligible for no reason that can now be conceived. It is now mostly frequented by coasting sloops who come here to take in their lading of corn, butter and cheese. Oysters, whittings and other fish are plenty: the sand in the neighbourhood is good manure, and is carried on horses, for that purpose, some miles into the country. At this village was found one of those glass rings, supposed to have been used as charms, or amulets, by the ancient Druids: They are small glass amulets, generally about half as wide as our finger rings, but much thicker; usually of a green colour, though some are blue, and others curiously waved with blue, red and white. The Welsh call these rings *Gleineu Nadrifedh*, and suppose them generated by snakes; but in Glamorganshire, and Monmouthshire, they are called *Maeu magh*, and corruptly *Glaim*, for *Glain*: the English, in some places, call them *Snake-stones*. An account of some others will be found in our descriptions of Denbighshire and Merionethshire; but a still more extensive one in the last edition of Camden's *Britannia*, page 815. At *Llanwyvan*, in the neighbourhood of *Aberfraw*, is a quarry of white marble, which takes a good polish, and might be useful in statuary. *Aberfraw* has four fairs, on March the seventh, Wednesday after Trinity, October the twenty-third, and December the nineteenth, all for cattle.

Tregaiian is situated on the banks of the *Keveny*, within something more than a mile of its source, and about ten miles to the north-east of *Aberfraw*. This village is chiefly remarkable as the birth-place of *William David ap Howel ap Iorworth*, who was living in it in the year 1581, though he died soon after, and was then one hundred and five years of age. He had had three wives and two concubines: the number of his children, lawfully begotten, was thirty-six; of those by his concubines, seven. His eldest son, *Griffith ap William*, eighty-four years old, had a great number of children and grand children; his youngest son *Griffith ap William*, two years old, was alive in the said parish, there being eighty-two years difference between his age and that of his brother: about eighty-eight persons, descended of the old man, were living at the same time, and in the same place; and it is said there were above three hundred persons in all, sprung from him, and born in his life-time. He was of mean stature, good complexion, seldom troubled with any disorder, moderate in diet, lived by tillage, and frequently exercised himself in fishing and fowling. His hearing, eyesight, and all his senses continued perfect to his death.

Malldrath, is a creek, four miles south-east of *Aberfraw*, frequented by small vessels which come to purchase corn, butter, and cheese, in great quantities, with most kinds of fish. Here is free-stone for building, and at *Llangeinwin*, veins of lead ore, plenty of a heavy ruddy spar, probably containing metal, and a green stone variegated with red and white spots, which will bear a polish. A sort of sea-spurge is found in the creek, with which they dye their wool yellow. Up the river are several coal pits, which they can only sink a few yards deep, on account of the water, which fills the works, and they have no engines to extract it. One vein of this coal is free and bituminous, to which some give the name of *run coal*, because it soon moulders in the open air. A second is very hard, resembling the stone coal of *Pembrokeshire*; a third of *kennel coal*; and a fourth, which resembles *culm*, but is not of the *culm* kind, because it will cake on the fire. Mr. Morris, who surveyed this island, thinks great profit might be made of these mines, if all the low grounds were drained.

From *Aberfraw* we crossed the sands, and came to a corporation town, called *Newborough*, and in British, *Rhos vair*. It is situated between the mouths of the rivers *Brant* and *Keveny*, two hundred and twenty-seven miles from London; and is the most considerable town on the island, except *Beaumaris*. But it has been in a much more flourishing state than at present, and had formerly a right of return-

ing a member to serve in parliament, which it has lost for some years. It appeared to us to be an excellent poor place; but we were told that the inhabitants were all so industrious, that there was not a beggar in the whole place; and indeed we did not find that any one asked alms of us; a circumstance not very common in little country towns. The decay of this town is said to be owing to the vast heaps of sands thrown up round it by the sea; which has prevented the navigation. The government of this town is in the hands of a mayor, recorder and two bailiffs. It has a weekly market on Tuesdays, and five annual fairs, viz. June the twenty-second, August the tenth and twenty-first, September the twenty-fifth, and November the eleventh; all for cattle.

Over the church door of *Llangud waladr*, N. W. of *Newburgh*, is a stone with the following inscription, in very antique characters, in memory of *Kadras*, who was prince of North-Wales, about the middle of the sixth century:

CATAMANUS REX SAPIENTISSIMUS OPINATISSIMUS
OMNIUM REGUM.

There is likewise another stone near this town, part of the inscription of which may be read; which is, *FILIUS ULRICI EREXIT HUNC LAPIDEM*: The son of *Ulric* erected this stone. Whence it should appear to be a Danish or Norwegian monument; the name not being British.

At *Tre'Varthin*, not far from *Newburgh*, in the year 1680, was found a large gold medal of *Julius Constantinus*.

At *Bad-Oyr*, about six miles north-east of *Newborough*, is a sepulchral monument, by the Welch called a *Kromlech*, from *Krwm*, somewhat convex, and *Llech* a flat stone. They are generally formed of rough, unhewn stones; but this is neatly wrought, and pointed into several angles. It is supposed by some, to be the *Mausoleum* of *Bronwen*, king *Lhyr's* daughter, who lived in the year of the world 3105; but this opinion is not supported by sufficient authority. The length is seven feet, breadth six feet, and the same in thickness. The upper stone is a detruncated pyramid, and flat at the top. There are but three of these *kromlech's* now remaining in this island: one of which is eleven feet and a half high, four broad, and fourteen inches thick; the second is twelve feet high, and four broad; and the third is ten feet high, eight broad, and but six inches thick.

Other monuments which consist of vast rude stones, laid together in circular order, inclosing an area five yards in diameter, called by the inhabitants *Irish cottages* or *huts*, are also found in *Anglesea*; but from the present appearance 'tis difficult to decide whether they were *Druid temples* or *sepulchral monuments*. There are several places denominated *Gwydhel*, i. e. *Irish*; but we cannot say upon what account, as there are no histories to inform us.

Remarks on the SEA-COASTS of ANGLESEA.

The coast of *Anglesea* is very rocky, though there are several good bays and harbours, where ships of considerable burden may ride in safety. About half a mile to the north-east of *Twyndu-point*, is a small island called *Priest-Holme*: the north side of it is bordered with rocks; and off the south-west corner is a large ledge of rocks, half a mile from the shore. There is however a passage between *Twyndu-point* and *Priest-Holme*, in which there is fifteen fathoms water; but the channel is not above a quarter of a mile broad. About sixteen miles to the westward of *Twyne-point*, is *Carren-point*, about a mile to the eastward of which is a large ledge of rocks called the *Platters*, on which is only three feet at low water. The channel between them and *Carren-point*, is about three quarters of a mile broad, and has seventeen fathoms water. About two miles to the north-east of *Carren-point*, is a large rock, called the *Cole*, on which there are but six feet water. About mid-way between the above rock and *Carren-point* is a large

large knoll, called the West-Mouse, always dry in the highest tides. About a quarter of a mile to the westward of the Platters, is a small island called the Skerries, on the coast of which are several rocks, but very near the shore. There is a passage between the Skerries and the Platters, in which there is seven fathom water.

Carren-bay, a little to the south-ward of Carren-point, is entirely free from rocks, so that ships of considerable burden may ride there in safety in southerly and south-west winds, there being five fathom water within half a mile from the shore. But to the south-ward of this bay the shore is rocky, so that ships seldom anchor nearer the shore than a mile, where there is ten fathom water. This is called Holy-head bay, and is frequented by ships and vessels frequenting that port.

The island of Holy-head, is separated from the island of Anglesea by a narrow arm of the sea. Before the port of Holy-head is a road where ships frequently come to an anchor in five fathom water, about half a mile from the shore, and are sheltered from all winds except those from the north. Just before the port is a small island, called Innis Cubby, the eastern shore of which is full of rocks: and about a quarter of a mile to the north-east of Innis Cubby is a large ledge of rocks, on which there is more than three feet water.

On the south-side of the island of Anglesea is two ports, frequented by small vessels, one called Aberfraw, and the other Newburgh; the latter is a market-town, and has been described in the preceding account of this island.

At the south-east point of Anglesea, a point of low

sandy grounds shoots off near two miles from the shore, and on the extremity is the ferry-house, where passengers land from Caernarvon. This point of land forms the western extremity of the freights of Menai, and is about three miles to the eastward of Caernarvon bar; about a mile and a half to the westward of this above point are two shoals, called the Mussel Banks, on which there are only two feet water.

About ten miles to the eastward of this point is a small island, called Bishop's island, situated almost in the middle of the freight; and about two miles and a half to the eastward of Bishop's island, is Cadnant bay, where small vessels often come to an anchor in ten feet water. There are several small islands in this bay. All along the sands, both on the Anglesea and Caernarvonshire sides of the freight, are wares for catching fish.

Two miles and a half to the eastward of Cadnant bay, is Beaumaris, where there is a ferry from the road from Conway leading a-cross the sands: To the eastward of Beaumaris to Twyndu-point; are several ledges of rocks scattered on the sands; but as there is not water sufficient for ships to get over these sands, the rocks are of no consequence to the navigation of these freights.

MEMBERS of PARLIAMENT for ANGLESEA.

The island of Anglesea sends two members to parliament, one knight of the shire for the county, and one burgess for the borough of Beaumaris.

M O N T G O M E R Y S H I R E.

THE Welsh name of this county is Tre-Faldwyn; the English Montgomery, is derived from Sir Roger de Montgomery, a Norman baron, who had a grant of a great part of this country.

Montgomeryshire is an inland mountainous county, bounded by Denbighshire on the north; by Cardigan-shire and Radnorshire on the south; by Shropshire on the east, and by Merionethshire on the west. It extends in length from east to west thirty miles, from north to south twenty-five miles, and is ninety-four miles in circumference. It is divided into seven hundreds, in which are five market towns, forty-seven parishes, about five thousand six hundred houses, and thirty-four thousand inhabitants. It lies in the province of Canterbury, and partly in the diocese of St. Asaph, partly in that of Bangor, and partly in that of Hereford.

Under the Romans this county was part of the territories of the Ordovices, of which we have already given a full account.

R I V E R S.

The principal rivers of this country are the Severn, the Tanat, and the Turgh. The Severn, which we have already described among the rivers of Gloucestershire, becomes navigable at Welsh-pool, a market town of this county, after having been joined by twelve rivers, in a passage of twenty miles from its source.

The Tanat, or Tanot, rises in the north-west part of the county, not far west of Llanvilling, a market town, and running eastward falls into the Severn, near the place where it enters the county of Salop.

The Turgh rises in the western part of this county, and running north-east, and being joined by the Warway, falls into the Tanat north-east of Llanvilling.

The less considerable rivers of this county are the Riader, the Vurnwey, the Rue, the Beckan, the Haves, the Carno, and the Dungun.

REMARKS on the INLAND NAVIGATION of Montgomeryshire.

The only river navigable in this county is the Severn, by which barges, boats, &c. come up to Welsh-pool. Small vessels also enter the mouth of the Diffi, described among the rivers of Merionethshire; and with little trouble might be made navigable to Machynleth, a market town in this county.

A I R A N D S O I L.

This county in many parts far exceeds any other of North-Wales, for fertility and richness of soil. The northern and western parts being mountainous, the soil is stony, and consequently barren; but the intermediate vallies, yield plenty of corn and abound in pasture; and the southern and eastern parts, consisting chiefly of a pleasant vale along the banks of the Severn, are exceeding fruitful.

The hills and mountains in this county are covered with verdure to this very summit, being a perfect contrast to those in the counties before described, where we saw nothing but craggy rocks and dreadful precipices.

The air is sharp and cold on the mountains; but in the vallies remarkable pleasant and healthy.

NATURAL PRODUCTIONS, and MANUFACTURES.

The breed of black cattle and horses, are infinitely larger here than that in the neighbouring Welsh counties; and the horses of Montgomeryshire are much valued all over England. This county likewise abounds with fish and fowl. Here are some mines of lead and copper; particularly in the neighbourhood of Llanidlos a market town; and at Welsh-pool, is a considerable manufacture of flannel.

MARKET TOWNS.

The market towns are Llanidlos, Llanvilling, Mechnleth, Montgomery, and Welsh-pool.

We embarked at Newburgh, and landed at the mouth of the Davey, passing to Machynleth, an ancient town situated on the eastern bank of the Diffi, over which it has a good stone-bridge, one hundred and eighty-three miles from London.

This town is supposed to have been the Maglona of the Romans, where, in the reign of the emperor Honorius, the band of the Solenses were stationed, to check the mountaineers.

Here is a weekly market on Mondays, and five annual fairs, viz. May the sixteenth, June the twenty-sixth, July the ninth, September the eighteenth, and November the twenty-fifth, for sheep, horned cattle and horses.

At Kevn Kaer, near Machynleth, are considerable ruins of large fortifications. Here are the traces of a round wall of considerable extent. The main fort, which was on the highest part of the hill, is of a quadrangular form, encompassed with a strong wall, and a broad ditch of an oval form; and excepting that part towards the valley, was extended in a direct line. On the outside of the great ditch, next the river Diffi, the foundations of many houses have been discovered; and on a lower mount stood a small fort, supposed to have been built with bricks, because they are found here in great plenty. All the out walls were built of a rough hard stone, which must have been brought hither by water, there being none such nearer than seven miles. From the fort to the water-side, there is a broad hard way, made with pebbles and other stones, continued through meadows and marsh grounds, about two hundred yards in length and twelve in breadth. It is very evident, that this fort was demolished before the building of the church of Penleth, because we find in the walls several bricks mixed with the stones, beyond all question carried from this place. Roman coins have also been found here, and particularly silver pieces of Augustus and Tiberius. Likewise near the main fort, a small gold chain was found, about four inches long, a wrought sapphire, several pieces of lead and glasses, in the form of hoops, curiously cut, and of various sizes, and likewise a large brass cauldron.

From hence we continued our journey to Llanvilling, or Llan Vyllyn, situated among the hills, between the river Cain, and the brook Eber, one hundred and fifty-six miles from London. It was incorporated by Llewellyn ap Griffith, during the reign of Edward II. and is at present governed by two bailiffs, to whom king Charles II. among other privileges, granted the authority of justices of the peace, during the time of their office, which lasts for one year. The town is dirty, on account of its lying on a flat, but is pretty well built, and has a considerable market on Thursdays,

for wool, cattle, corn, and other provisions; with four fairs, on the Wednesday before Easter, May the twenty-fourth, June the twenty-eighth, and October the fifth, for horses, sheep, and horned cattle.

Three miles to the south of Llanvilling, is Meivod, an inconsiderable village, which Dr. Powel imagines, was the Mediolanum celebrated by Antoninus and Ptolemy, many incontestable marks of antiquity having been discovered there, and in the adjacent fields. But authors are far from being agreed in fixing the situation of that ancient city: for Camden fixes it at Mylhin, in this county; and some other antiquarians at Llanvilling, where many Roman coins have been found: but Horsley thinks Mediolanum was seated near Drayton in Shropshire, because the distances mentioned by Ptolemy, between that and the other Roman stations, answer every way.

Leaving this place, we proceeded to Welsh Pool, called by the Welsh *Tralawn*, which signifies the town by a lake, whence the English name is derived. It is seated in a rich vale, one hundred and fifty-three miles from London, and is the most considerable town in the whole country. It is large, regular, well built, and superior to most Welsh towns. It carries on a flourishing trade with Bristol for English commodities; and has a good manufacture of flannel.

Here is a considerable weekly market on Mondays, for cattle, provisions, and flannels; and six annual fairs, viz. on the second Monday in March, on the first Monday before Easter, on the fifth of June, on the first Monday after the twenty-ninth of June, on the twelfth of September, and on the sixteenth of November, for horned cattle, sheep and horses.

On the south side of Welsh-Pool is Powis Castle, called by the Britons, from the red stone with which it was built, *Castell Cock Ymhowys*, or the Red Castle in Powys land. There were formerly within these walls two castles; that now remaining is the seat of lord Powis. It is situated on a fine hill, which commands a prospect of an extensive, variegated, and fertile country. The vale of Montgomery, which we see from the castle, is not equalled by any, in point of fertility and beauty, in Wales, nor perhaps in England. The Severn winds its serpentine course through this vale, and heightens the beauties of the prospect. On each side the vale, the hills tower in majesty and grandeur; which altogether conspire to render this situation and prospect far preferable to that of the vale of Clwyd. Some even venture to affirm, that it is not equalled by any in Great Britain.

The castle of Powis, and the fine gardens, are much neglected and decayed, as his lordship does not reside here.

We next visited Montgomery, the county town. It was built by Valdwyn, or Baldwin, lieutenant of the marches of Wales, in the reign of William the Conqueror, for which reason the Britons call it *Tre-Valdwyn*, or Baldwin's town; but the English are said to have named it Montgomery, from Roger Montgomery, to whom king William I. had given the earldoms of Arundel and Shrewsbury, who gained the castle and town of Baldwin. The castle was afterwards demolished by the Welsh, but William Rufus re-edified it in 1093,

and it was burnt by king Henry III. in 1232. But being afterwards rebuilt, it became the seat of the lords Herbert of Cherbury. It was since ruined in the civil wars of king Charles I. and was lately, if it is not still, in the possession of Henry Arthur Herbert, Esq. The remains of this castle are still to be seen. It is guarded by a craggy precipice on one side, and a deep fosse on the other.

Montgomery is a pretty considerable town, situated in a healthy air, on the easy ascent of a rocky hill, one hundred and fifty-eight miles from London. It was formerly walled round, and a considerable frontier town in the wars between the English and Welsh. King Henry III. fortified it; likewise greatly improved it, and made it a borough town. The buildings in general are but indifferent, except a few new houses belonging to gentlemen of fortune; yet upon the whole, the town makes a handsome appearance. It is governed by two bailiffs, coroners, burgesses, and other officers. This town sends one member to parliament. Here is a jail, which was rebuilt not many years ago; a pretty good weekly market on Thursdays, and four annual fairs, held on the twenty-sixth of March, the seventh of June, the fourth of September, and the fourteenth of November, for horned cattle, sheep and horses.

From hence we passed on to Llanidlos, situated on the eastern bank of the river Severn, not far from its source, in the southern part of the county, at the distance of one hundred and fifty-eight miles from London. It has nothing worthy of notice, but is a small inconsiderable place, except having a weekly market on Saturdays, and five annual fairs, viz. the first Saturday in April, May the eleventh, July the seventeenth, the first Saturday in September, and October the twenty-eighth, for horses, horned cattle, and sheep.

Not far from Llanidlos is Caerfws, which is seated on the banks of the Severn. This was anciently a town of considerable extent, and is supposed to have been founded by the Romans: the traces of fortifications, streets and lanes, are still visible. Roman bricks and hewn stones are frequently dug up, and in the neighbourhood are three intrenchments, with a large barrow.

About ten miles to the westward of Llanidlos is Newtown, or Treniwyth, which is three furlongs in length, and was formerly a corporation; but that privilege has been taken away. It has still five fairs, held on the last Tuesday in March, the twenty-fourth of June, the last Tuesday in August, the twenty-fourth of October, and the sixteenth of December, for horned cattle, sheep and horses.

At the distance of eight miles north-west of Newtown, is Llanlegan, where was a nunnery of the Cistercian order, founded before the year 1239, and valued, at the suppression of religious houses, at twenty-two pounds fourteen shillings and eight-pence *per annum*.

MEMBERS of PARLIAMENT for MONTGOMERYSHIRE.

This county sends two members to parliament; one knight of the shire for the county, and one burgess for Montgomery, jointly with the other boroughs.

R A D N O R S H I R E.

THIS county, which is by the Welsh called Sir Vnes-ived, derives its name from Radnor, the county town. It is bounded by Montgomeryshire on the north, by Brecknockshire on the south, by Cardiganshire on the west, and by Shropshire and Herefordshire on the east. It extends in length, from east to west, twenty-four miles; from north to south, twenty-two miles; and is about ninety miles in circumference. It is divided into six hundreds, in which are three market-towns, fifty-two parishes, about three thousand houses, and nineteen thousand inhabitants. It lies in the province of Canterbury, and partly in the diocese of St. David's, and partly in that of Hereford; and Radnor, the county town, is one hundred and fifty-seven miles from London.

This county, together with Brecknockshire, Monmouthshire, Glamorganshire, and Herefordshire, which borders on Wales, constitute that district, which, in the time of the Romans, was inhabited by the Silures, a people whom Tacitus, and some others, from their ruddy complexion, curled hair, and situation over-against Spain, have supposed to come originally from that country. The derivation of their name is uncertain; but we are informed by Pliny and Tacitus, that they were a stout, bold, and warlike people, impatient of servitude, and inflexibly obstinate. They long opposed the Roman power under their king Caractacus, being made desperate by a declaration of the emperor Claudius, that they should be totally exterminated. During this war, they were at length defeated by Aulus Plautius, and their king Caractacus taken prisoner, and sent to Rome, where he was led in triumph; but notwithstanding this, they were not entirely subdued till the reign of Vespasian. A Roman legion was then placed in garrison among them, which effectually prevented a revolt.

This county contains several barrows, and most of the mountains have cairns, or large heaps of stones, probably intended as memorials of the dead. These heaps of stones were raised by the Romans for sepulchral monuments, as we find by Homer's description of Hector's funeral; but after the planting of Christianity, they became so detestable, from their being appropriated only to malefactors, that the most passionate wish a man could express to his enemy, was, that a cairn might be his monument. Hence the Welsh call the worst traitors Carn-vradwyr, and notorious thieves, Carn Lhadron. One of the most celebrated remains of antiquity in this county, is part of a work, called by the Welsh Klawdh Offa, or Offa's dyke, from its having been cut by Offa, king of Mercia, as a boundary between the English Saxons, and the ancient Britons. This dyke may be traced from the mouth of the river Wye, to that of the Dee, through the whole extent of this county.

R I V E R S.

The principal rivers of this county are the Wye, the Temd, and the Ithon or Ython. The Wye has been already described among the rivers of Gloucestershire.

The Temd rises in the north part of this county, and running eastward, separates Radnorshire from Shropshire, and after dividing Shropshire from Herefordshire and Worcestershire, falls into the Severn, near the city of Worcester.

The Ithon rising in a chain of vast mountains, in the northern extremity of the county, runs south and south-west, and at length falls into the Wye, about

four miles to the north by west of Bealt in Brecknockshire.

The less considerable rivers, are the Clowdok, the Dulas, and the Cameran; all which discharge themselves into the Ithon.

AIR, SOIL; and NATURAL PRODUCTIONS.

The air of this county is cold and piercing. The soil of the northern and western parts is but indifferent as they abound in rocks and mountains, which are however well provided with wood, and afford pasture for sheep. The eastern and southern parts are well cultivated and pretty fruitful in corn. Radnorshire is watered with rivulets and some standing lakes, and the rivers afford plenty of Salmon and other fish.

It does not appear that this county has any manufacture.

MARKET TOWNS.

The market towns are Prestein, Radnor, and Knighton.

We entered this county near the village of Leithleiu, and continued our journey across the forest of Knuckle to Knighton, situated in a valley on the bank of the Temd, over which it has a bridge, and is called by the Welsh Trelenels. By it passes Offa's dyke which extends from the Dee to Weymouth, it being about eighty computed miles, and was designed, as we have before observed, to separate the Britons from the English. King Harold made a law, that whatever Welshman should be found armed on the east side of the dyke, should have his right hand cut off by the king's officers.

Knighton is a well built town one hundred and forty-seven miles from London, of good trade and great resort. It has a considerable weekly market on Thursdays, which is well supplied with cattle, corn, hardware, linnen and woollen cloth, hops, salt, and other commodities; and here are two annual fairs, viz. the sixth of May, and the twenty-first of September, for horses, horned cattle, and sheep.

Twenty-two miles to the west of Knighton is Rhaider Grey situated by a cataract, where the river Wye falls down a steep precipice, whence the town derives its name, which signifies the cataract or fall of the river Wye. It had formerly a castle, which was repaired by Rhys, prince of South-Wales, in the reign of king Richard the First; but there are not at present the least remains of it; only on one side of the castle yard is a deep trench, cut out of an exceeding hard and solid rock. About two furlongs below the place where the castle stood is a large barrow, and on the other side of the chapel adjoining are two more, but much less than the former. The town is very small, and contains nothing worthy of notice.

Near this place, Camden says, is a vast wilderness, rendered very dismal by many crooked ways and high mountains; into which, as a proper place of refuge, king Vortigern withdrew himself, when he at last repented of his calling in the English Saxons, and incestuously marrying his own daughter.

The only religious house in this county was at Combehire, north-east of the above cataract, where Cadwathelan ap Madoc, in 1143, founded a Cistercian abbey, which was dedicated to St. Mary, and at the general suppression, had a revenue which was then valued at

twenty-eight pound seventeen shillings and four-pence a year.

Three miles north by west of Rhaidar Gwy is a village called St. Harmon, which has a fair on the fifteenth of August, for horned cattle, sheep and horses.

We continued our journey from hence to Prestein, or Presteyn, situated in a pleasant and rich valley, on the bank of the river Lug, a hundred and forty-eight miles from London. It is called in Welsh Llan-Andre; and was formerly only a village; but is at present a well built populous town, in which the assizes for the county are held; and here is the county jail. The streets are well paved, and kept clean. Here is an exceeding good weekly market on Saturdays for provisions and grain, particularly barley, of which the inhabitants make considerable quantities of malt; and two annual fairs, viz. June the twenty-fourth; and November the thirtieth, for sheep, black cattle, and horses.

From Prestein we proceeded to Radnor, which is likewise called New-Radnor, to distinguish it from a small village to the south-east, called Old Radnor. It is situated in a pleasant valley, one hundred and fifty-one miles from London, near the spring-head of the river Somergil, at the foot of a hill called the Forest of Radnor, which feeds a great number of sheep and other cattle. It was formerly defended by walls and a strong castle, the latter of which being laid in ashes by Owen Glendower, a notorious rebel, the town daily decayed. Radnor is a pretty well built town for this part of the country: it was an ancient borough by prescription till the reign of queen Elizabeth, who granted it a charter, with many privileges, together with a manor, which contains eleven large townships, and a jurisdiction extending ten or twelve miles. It is governed by a recorder, two aldermen, and twenty-five burgesses, out of whom the recorder, two aldermen and bailiff, are annually chosen. The town has a court of pleas for all actions without limitation; it sends one member to parliament, who is elected by the sworn burgesses of the town, paying scot and lot. Here is a weekly market on Thursdays, and an annual fair held on the twenty-ninth of October, for horses, black cattle, and sheep.

About two miles and a half to the west of this town is Old Radnor, called by the Welch Maes Ivid Hen, and from its high situation, Pen-braeg. Camden supposes this place to have been the Magoth, or Magnoth, mentioned by Antoninus, where the commander of the Pacienician regiment lay in garrison, under the lieutenant of Briton, in the reign of Theodosius the Younger: in proof of this, he tells us, that the writers of the middle age called the inhabitants of this country the Magasetae, and that its distance from other places mentioned by Antoninus, confirms this opinion.

Seven miles south of New Radnor is Pain's Castle, so called from its being built by Pain a Norman. This castle being demolished by the Welsh, was rebuilt by Henry III. with stone, in the year 1231. There are here two fairs, held on the twelfth of May, and the nineteenth of December, for horned cattle, sheep and horses.

Nine miles west of New Radnor is the village of Llandrindod, by which is a common, six miles long, and three quarters of a mile broad; and in that part of it which lies in this parish, are medicinal springs of approved virtue. These are the saline pump water, the sulphureous water, and the chalybeate rock water.

The saline purging water is called upon the spot the Pump-water, and from various experiments it appears to contain a neutral salt like native borax, a small quantity of bitumen, and an etherial volatile, mineral spirit, and a mineral oil. It is excellent in all diseases of the skin, and in such disorders as proceed from corrupt humours; but if the disease be obstinate, it requires some time to cure it radically. Persons troubled with the scurvy must use the water both as a purgative and alterative; and for the last a pint and a half should be taken at three doses,

in the morning before breakfast. As a purge, half a pint must be drunk at a time, till it begins to work. In diseases of the skin, the patient must bathe frequently, and wash the parts affected with the water, and particularly in the leprosy, so much water must be drunk, as to cause two or three motions every day; to which must be joined bathing twice a week in a warm bath, made with equal quantities of the pump and sulphureous waters. In the gravel, the patient must drink so much as will give him two or three stools, and when the gravel is discharged by this means, the patient must drink every morning half a pint of the rock water, half a pint of the pump water, and half the quantity going to bed.

The sulphurous water, commonly called the black stinking water, has its name from the strong smell, and the blackness of the channel through which it passes. It smells like the washings of a foul gun, and has the strongest smell in rainy weather. From various experiments, it appears to contain etherial, volatile, mineral spirits, a small quantity of vitriolic acid, a mineral unctuous mucus, a fine mineral oil, a subtile crocus, a perfect sulphur, and a neutral salt, of a briny calcareous nature. It is of great use in all cases, where bathing is proper, made into a luke warm bath. It is excellent in benumbed limbs, in wasting of the flesh, and in nervous disorders; as also in venereal complaints, old sores, tetters, and in all diseases of the skin; as well as in the stone, gravel, rheumatism, and gouty distempers. Taken inwardly, and used outwardly, it cures the king's evil, and is an excellent absorbent, inasmuch, that it is efficacious in soreness of the stomach, obstructions of the liver, and in the jaundice. It is also good in contractions and weakness of the limbs, and in broken constitutions from hard drinking. The dose cannot be determined, and therefore it is best to begin with drinking from a pint to a quart in a morning, that is, about half a pint at a time, with short intervals between the draughts: the quantity may be increased to as much as the constitution will bear, that is, as much as will sit easy on the stomach, and pass off well.

The rock water is so called, because it issues out of a rock, and a glass of it taken up in a clear warm day, is as bright as crystal; but after it has stood some time, it changes to a pearl colour. While it continues clear it has a strong chalybeate taste and smell; but they forsake it as it changes colour: at the spring head, it turns to a deep purple with powder of galls, and becomes hot with oil of vitriol. However, it will not curdle milk; but with oil of tartar it becomes as white as milk, which afterwards changes to a yellowish green. It preserves its transparency with acid spirits; but with sugar of lead it turns first milk white, and at length lets fall a yellowish grey sediment, from a quart of water, which, after it has been analysed, is found to contain about fifteen grains of crocus of iron, and about five of the bituminous mucilage of iron. From hence, and various other experiments, it is concluded, that this water contains iron, salt, sulphur and vitriol. It is good in all chronic distempers, proceeding from a laxity of the fibres; and particularly in scorbutic eruptions and weakness of the nerves, and disorders proceeding from the brain. It is also efficacious in obstinate agues, obstructions of the bowels, slow nervous fevers, and in all female disorders.

The air of this place is extremely salutary, whence the weak and consumptive people that come here to drink the waters, soon revive and gather strength. These springs are now frequented by very genteel company, and in the summer season the common people resort hither in crowds.

MEMBERS of PARLIAMENT for RADNORSHIRE.

This county sends two members to parliament; one knight of the shire for the county, and one burges for the borough of New Radnor.

B R E C K N O C K S H I R E.

THIS county derives its name from the Welsh word Brycheinog, the derivation of which is supposed to come from Brechoni, an ancient British prince of this county, famous for having twenty-four daughters, who, after their death, were all reputed faints.

Brecknockshire is bounded on the north by Radnorshire; on the south by Glamorganshire; on the east by Herefordshire and Monmouthshire; and on the west by Caermarthenshire and Cardiganshire. It extends in length, from north to south, thirty-five miles; from east to west, thirty-four; and about one hundred and ten in circumference. It is divided into six hundreds, in which are four market-towns, sixty-one parishes, about six thousand houses, and thirty-three thousand five hundred inhabitants. It lies in the province of Canterbury, and diocese of St. David's; and Brecknock, the county town, is one hundred and sixty miles from London.

In the time of the Romans, this county, as we have before observed, was part of the territories inhabited by the Silures, of whom some account has been given in our description of Radnorshire.

R I V E R S.

The principal rivers of this county are, the Wye, the Usk, and the Yrvan. A description of the Wye has been already given in our account of Gloucestershire.

The Usk is so called by a small variation of the British name Wyfk, which signifies water. It rises at the bottom of a hill south-west of Brecknock, on the borders of Caermarthenshire; and running south-east through the town of Brecknock, and being joined by several less considerable rivers, passes into Monmouthshire near the town of Abergavenny.

The Yrvan, or Irvon, rises among some hills upon the borders of Cardiganshire, north-west of Bealt, a market-town; and running south-east, and being joined by several smaller streams, falls into the river Wye near Bealt.

Other inconsiderable rivers of this county are, the Wheffrey, the Dules, the Hondky, and the Brane.

A I R A N D S O I L.

The air of this county is remarkably mild every where, except on the hills, which is attributed to its being surrounded with high mountains, some of which are exceeding high, particularly Canterbochan, Talgar, Ewias, and above all, Mouchdenny, not far from Brecknock. The soil on the hills is very stony; but as several small rivers issue from the mountains, the vallies which receive these streams are very fruitful, both in corn and pasture.

NATURAL PRODUCTIONS, and MANUFACTURES.

Brecknockshire produces not only black cattle, goats, and deer, but also great abundance of fowl; and the rivers are all well stored with fish, particularly the Usk and Wye, which abound with salmon and trout. On the east side of the town of Brecknock is a lake called Brecknock-Mere, which is about two miles over every way, wherein is such an amazing plenty of perch, tench and eels, that it is generally said to be two thirds water, and one third fish. The method the inhabitants have of catching them, is somewhat curious. For this

purpose they make use of a small boat, called a coracle, which is nearly of an oval form, constructed of split fally-twigs, interwoven like baskets; the bottom is round, and the part next the water covered with a raw horse's hide. In length it is about five feet, and in breadth three, and so light, that the fisherman carries it to and from the lake on his back. Each of these coracles holds one man, who, when seated, will row himself swiftly with one hand, whilst with the other he manages his net, angling-rod, or other fishing tackle. This lake, by the Welsh, has been called Lyhu Savedhan, but is now more commonly named Lhan-gorsse-Pool.

The principal manufactures of this county are cloth and stockings.

MARKET TOWNS.

The market towns are, Bealt, Crickhowel, Brecknock, and Hay.

We entered this county by crossing the river Wye at Radnor, and came first to Bealt, otherwise called Beuholt, or Buihth, pleasantly situated in a woody country, on the south bank of the river Wye, over which it has a large wooden bridge, one hundred and fifty-seven miles from London. It was formerly a place of considerable note, fortified with a castle, which was demolished by Rice ap Griffith, and rebuilt by the Breafes and Mortimers. This town is of so great antiquity, that it is by some supposed to be the Ballæum Silurum mentioned by Ptolemy; but other antiquaries doubt, whether that Roman fort was in this county. Horseley particularly placing Bullæum, the Burrium of Antoninus, at Uske, in Monmouthshire. Some imagine it was at Kaereu, which was certainly a Roman fort, for the word signifies walls, or a rampire, and was prefixed by the ancient Britons to almost all the Roman towns and castles. Roman bricks are often dug up there, and we meet with other evident signs of a Roman work, but it is now only a gentleman's house, and not far from it is another house called Castelham.

In the year 1690, great part of Bealt next the river was burnt down by an accidental fire; and this town is now remarkable only for a large manufacture of stockings, and three weekly markets, the most considerable of which is held on Mondays, for live cattle; and the other two on Thursdays and Saturdays. Here are also three annual fairs, viz. June the twenty-seventh, October the second, and December the sixth, for horses, horned cattle, and sheep.

From Bealt we continued our journey to Hay, situated on the banks of the Wye, and on the borders of Herefordshire, one hundred and thirty-five miles from London. In the rebellion of Owen Glyn-dwr, or Glyn-dowrdwy it suffered considerable damage, and was reduced to a small village. The ruins of a castle are still to be seen here, and this town is generally believed to have been a Roman station, from the remains of a Roman wall, and several Roman coins having been found here. It formerly was called Haia and Tregelhi, and belonged to William de Brus, lord of Brecknock, and was almost destroyed in 1216, by Lewis, dauphin of France, who had been invited into England, by the barons disaffected to king John. It is however at present a pretty good town, with a considerable weekly market on Thursdays, for corn, cattle and provisions; and three annual fairs, viz. May the seventeenth, August the twelfth, and October the tenth, for horses, horned cattle and sheep.

We proceeded from hence to Crickhowel, a small town situated on the river Usk, over which it has a bridge, one hundred and forty-eight miles from London. It consists of about one hundred houses, one of which is a large and commodious inn; and is governed by a bailiff and two burgeses. Here was formerly a castle, called Alasby-castle, the ruins of which are still to be seen, and shew it to have been a place of considerable strength, but by whom it was erected is uncertain.

About three miles from Crickhowel, in a low vale, near the river Usk, was situated, Trotwr castle, a place of great antiquity, which was the residence of Mynarch, lord of Brecon. Some ruins of this castle are still remaining, and among them, a lofty round tower.

Five miles from this castle is Talgarth, a village remarkable for having six annual fairs, viz. March the twelfth, May the thirty-first, July the tenth, September the twenty-third, November the third, and December the third, all for cattle, sheep and horses.

At Pentre Yfky throg, near Talgarth, a stone pillar stands in the highway, of a cylindrical form, and about six feet high, on which is the following mutilated inscription, to be read downwards; but little of it is now legible, and in very barbarous characters,

N FILIUS VICTORINI.

Perhaps it was a monument erected to the memory of some deceased person, though supposed of a later date than the times of the Romans.

About two miles from Talgarth, stands Brwynllys, or Brunlefs castle, situated on a small river, called the Sheveney. It is uncertain when or by whom it was built; but in the reign of Henry II. Mahel, son of Bernard Newmarch, lord of Brecon, by Nesta, there met with the just punishment of his crimes. As he was plundering the lands of David Fitz-gerald, bishop of St. David's, he was entertained by Walter Clifford, in this castle, for one night, when the castle took fire, and Mahel in endeavouring to escape the flames, was killed by the fall of a stone. There is an extraordinary circumstance, worth recording relative to this Mahel, and his mother. After the death of his father, having affronted a young lord, with whom Nesta was too familiar, she in revenge, at once deprived herself of her reputation, and Mahel of his inheritance, by swearing before Henry II. that he was begotten in adultery, and was not the son of Bernard her husband. In consequence, the estate devolved on Mahel's sister Sibyl, wife of Milo earl of Hereford, whose five sons dying without issue, this large inheritance came to his daughter, Bertha, who marrying Philip de Brus, had issue by him William de Brus, lord of Brecknock, from whose family it came, by an heiress, to the Bohuns, and lastly to the Staffords; but by the attainder of Edward Stafford, duke of Buckingham, in the reign of Henry VIII. it was forfeited to the crown. The ruins of this castle prove it to have been a place of considerable strength. The walls now standing are very lofty, and the round tower on an eminence is almost entire.

From Crickhowel we pursued our journey to Brecknock, or Brecon, the principal town, situated nearly in the center of the county, one hundred and sixty miles from London. By the Britons it was called Aber-hondhy, because, seated at the confluence of the rivers Hondhy and Usk, over which there is a handsome stone-bridge of seven arches. It is a corporate town, divided into eleven wards, and is governed by two bailiffs, a recorder, fifteen aldermen, two chamberlains, a town-clerk, two constables, and two serjeants at mace, and the assizes for the county are held in it. The houses are well built, and there are three parish churches, one of which, seated on an eminence, at the west end of the town, is collegiate. It is a most magnificent, spacious building, in the form of a cross, near two hundred feet long, and sixty broad. In the centre of the cross, an embattled tower rises, about ninety feet high, which lies open to the church, above the roof. The chancel has no side aisles, but the body of the church has, and is waincoted, flat at top, and painted. On the north side is a paved cloister, which opens into the church, and joins

it to the priory-house, where the refectory, or dining-hall is still remaining. This priory was founded by Barnard de Newmarch, for benedictine monks, in the reign of Henry I. dedicated to St. John the Evangelist; and made subordinate to Battle-abbey, in Suffex. King Henry VIII. refounded it as a collegiate church, with fourteen prebendaries, which he translated from Aber-Giviley, in Caermarthenshire.

There was formerly a magnificent castle at Brecknock, and a strong wall, with three gates, surrounded the town. The castle was built in the reign of William Rufus, by Bernard de Newmarch, the conqueror of this country, and afterwards repaired by the Brus's and the Bohuns. Dr. Morton, bishop of Ely, was confined therein, by the protector Richard, afterwards Richard III. who committed him to the custody of Humfrey Stafford, duke of Buckingham, who procured Richard the crown; but being afterwards disgusted with the bishop, his prisoner, contrived his overthrow, and the promotion of Henry, earl of Richmond, afterwards Henry VII. which was all projected between them, in a tower of the castle, the ruins of which still bear the name of Twr-Eli, or Ely tower, and was afterwards brought to an happy issue, though the duke lost his life before its accomplishment.

The town was inhabited in the time of the Romans, which is evident from several coins of their emperors having been discovered, as well as from many Roman bricks which have been turned up by the plough, at a square Roman camp, in the neighbourhood called Y Gaer, the fortification. These bricks were all inscribed L E G. II. A U G. Close to this camp, in the middle of the highway, is a remarkable monument called Maen y Morynienn, or the Maiden-stone, which is a rude pillar, about six feet high, two broad, and six inches thick, having, on one side, the portraits of a man and woman, in ancient habits, carved with much labour, but little skill; because they are raised considerably above the surface of the stone. It is undoubtedly very ancient; but whether a British or Roman remain, cannot be determined.

Brecknock sends one member to parliament; has a woollen manufacture, two weekly markets, well furnished with corn, cattle and provisions, kept on Wednesdays and Saturdays; also four annual fairs, viz. May the fourth, July the fifth, September the tenth, and November the seventeenth, for leather, hops, cattle, and all sorts of provisions.

About two miles north of Brecknock, stands Lhanthrew remarkable only for having a castle in the neighbourhood, situated on the east side of the river Hondhy, which running hence, about a mile to the south, falls into the Usk, and gives name to the town of Brecon, called, as observed above, by the Britons, Aber-hondhy. It is not certain when this castle was erected, or came into the possession of the bishop of St. David's; but in a statute of that church, made by bishop Henry Gower, in 1342, to discharge and exonerate the bishops of this see, from keeping up more episcopal castles and houses than were necessary, this of Lhanthrew, and six other places of residence, were ordered to be supported and maintained; but the remains are, at this time, very inconsiderable, consisting only of some old walls, which, with the manor, are still the property of the bishops of St. David's.

About seven miles from Brecknock, we meet with Blaen-Lleveny castle, which is about two miles N. E. of this road, and so named from being placed near the rise or head of the river Lleveny, which empties itself into Brecknock-mere. It is supposed the famous city Loventium, of Ptolemy, formerly stood near this castle, which is the more probable from the ruins found there, and all the great roads of the country tending thither; but in the last edition of Camden, Loventium, Loventinum, Luentionum, or Luentinum, as it is variously written, is fixed at Lhan dewi brevi, in Cardiganshire. The castle is situated remarkably low, between Trotwr castle and Brecon, not far from the north bank of the Usk, and commands a fine view of the Meré. It was the demesne of a very considerable baron, and fortified by

Peter

Peter Fitz-Herbet, descended of Bernard Newmarch, lord of Brecon, and his wife Nesta, daughter of Griffin ap Llewellyn, prince of Wales: it afterwards, with its honours, came to the crown, but was granted away by king James I. and is now in private hands.

On the summit of a mountain near Lhan Thammwalch, a village not far from Brecknock, is an ancient monument called Ty Iltud, or St. Iltud's Ilernitage. It stands near the church, and is composed of four large stones of a flattish form, but altogether rude and unpolished. Three of them are pitched in the ground, and the fourth serves them for a cover; so that together they make an oblong square hut, open at one end, being about eight feet in length, four in width, and nearly the same in height: within, the two side stones are inscribed with a number of crosses.

This hut seems to have been erected in the Pagan times, and very probably, by the ancient Druids; because there are other stones of this sort, well known to have been of their erection. At present there is no circle round it, but there seems to have been one originally, some traces of it being still to be seen, and a stone which stood within a few paces of the cell, has been carried away but a few years since, where there are other stones now remaining.

MEMBERS of PARLIAMENT for BRECKNOCKSHIRE.

This county sends two members to parliament; one knight of the shire for the county, and one burges for the borough of Brecknock.

CAERMARTHENSHIRE.

THIS county, which derives its name from Caer-marthen, the county town, is bounded on the north by Cardiganshire, on the south, by the Severn, or St. George's Channel; on the east by Brecknockshire and Glamorganshire, and on the west by Pembrokeshire. It extends in length from north to south, about thirty-five miles; in breadth from east to west about twenty, and is one hundred and two mile, in circumference.

Under the Romans, Caer-marthen, Cardiganshire, and Pembrokeshire, were inhabited by a tribe of Britons, called by Ptolemy Dimetæ and Demtæ. Pliny has allotted this district to the Silures; but in this he was mistaken, as it appears that later writers have constantly given the name of Dimetia, to these three counties; which word is supposed with great probability to be derived from the British name Dyved, by an easy change of the letter V into an M, a customary thing with the Romans; and it is by this name that the said three counties are still known among the native Welsh; yet some have supposed that the name Demetæ was derived from the British words Deheu-meath, which it is pretended signify the southern plains.

The tenth legion, called Antoniana, which served under Ostorius against the Silures and Ordovices, was in this county, as appears by several coins which have been found inscribed ANT AVG. and LEG.

R I V E R S.

This county is well watered by several large rivers, the principal of which are the Towy, the Cothy, and the Tave. The Towy is a considerable river which rises in Cardiganshire, north-east of Tregaron, a market town; and running south and south-west through this county, and passing by Llanidover, Llandilovawr, and Caer-marthen, three market towns, falls into St. George's Channel about eight miles south of Caer-marthen.

The Cothy rises upon the borders of Cardiganshire, south-east of Tregaron; and running south-west, falls into the Towy about six miles east of Caer-marthen.

The Tave, or Teivy, rises in Cardiganshire, near the spring of the Towy; and running south-west, and separating Cardiganshire from Caer-marthen and Pembrokeshire, falls into the Irish sea near Cardigan, the county town of the shire of that name.

The less remarkable rivers of this county are the Dalas, the Brane, the Guendravawr, the Cowen, the Towa, the Tave, and the Amond.

REMARKS on the INLAND NAVIGATION of Caer-marthen-shire.

The only navigable rivers in this county are the Towy, and the Tave, which has water sufficient for vessels of considerable burthen to Caer-marthen bridge. Boats pass up much farther; some to Llandilovawr. It is indeed capable almost through the whole country, but the many falls from the higher parts would render the undertaking very expensive. The Cothy also might be rendered navigable; but not passing by any town of note, the work will probably never be attempted.

The Tave, or Teivy, is a very considerable river, and navigable for boats as high as Llambadar in Cardiganshire, near thirty miles from its mouth. Ships of considerable burden pass up to Cardigan.

We shall describe the different mouths, &c. of the river, in our remarks on the sea-coasts of Caer-marthen-shire.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of Caer-marthen-shire is esteemed more mild and healthy than that of most of the neighbouring counties; and the soil not being so mountainous and rocky as in many other parts of Wales, is more fruitful in corn and grass. This county is well furnished with wood, feeds vast numbers of good cattle, abounds with fowl and fish, particularly salmon, for which the rivers here are famous; and contains many mines of pit coal. It does not appear that there is any manufacture here.

MARKET TOWNS.

The market-towns are, Llanelly, Kidwelly, Caer-marthen, Langharn, Newcastle in Emlyn, Llanidover, Llangadock, and Llandilovawr.

We entered this county by the road from Brecknock, and pursued our journey north-west to Llanidover, or Llanidofry, situated near the river Towy, on the borders of the county next Brecknockshire, one hundred and eighty-two miles from London. It is governed by a bailiff, and twelve capital burges; and all the freeholders are inferior burges. It consists of about one hundred mean houses: the parish church, which is dedicated to St. Mary, stands upon a hill, at a little distance from the town. Near the east end of this church, Roman bricks, and other remains of antiquity, have been dug up, and there is a fine Roman way from the church to Lhanbran, which lies a few miles north

of the town. Llanidmoverly had formerly a good castle, and still has two considerable weekly markets, on Wednesdays and Saturdays, and six annual fairs, viz. on July the thirty-first, Wednesday after October the tenth, November the twenty-sixth, Wednesday after Epiphany, Wednesday after Easter, and Whitfun-Tuesday, for cattle, pigs, stockings, and other things.

We next visited Llandilovawr, situated on the river Dowy, over which here is a handsome stonebridge, one hundred and seventy-two miles from London. It is a pretty good town, and the largest parish in the county, being thirteen miles long, and seven or eight broad. Here are two weekly markets, held on Tuesdays and Saturdays, for corn, cattle, and provisions; and one annual fair, held June the twenty-first, for cattle, horses, sheep, and wool.

Caerkenen Castle is built on a rock, and stands between the hills, about four miles east of Llandilovawr. By the gift of king Henry VII. it came to Sir Rice ap Thomas, Knt. of the garter, but being forfeited by his grandson, Rice Griffith, it was granted to Richard Vaughan, earl of Carbery, lord president of Wales.

About three miles south-west of Llandilovawr is Denever Castle, or more properly Denefawr Castle, which was the royal seat of the prince of South Wales. It has a very high situation, being placed on the top of a hill, whereon grow a vast number of trees. It has changed its master very often, till at length it fell to the crown, and Henry VII. made a grant of it to Sir Rice ap Thomas, Knt. of the garter, in whose family it still continues. There is only the middle part of it kept in repair, the rest being in ruins; yet it has a very agreeable appearance at a distance.

Leaving Llandilovawr, we proceeded to Llangadock, situated between the rivers Brane and Lawthy, one hundred and eighty-seven miles from London. It is an inconsiderable town of note, but for a good weekly market on Thursdays, and five annual fairs, viz. March the twelfth, for horses and pedlars ware; Holy Thursday, July the ninth, and the first Thursday in September, for cattle, horses, and sheep; and on December the eleventh, for cattle and pedlars ware.

From hence we passed on to Llanelly, or Llanelthy, a pretty good town, two hundred and fourteen miles from London. It stands very advantageously for the coal trade, being situated between a creek of the sea and Dules river.

Here is a weekly market on Thursday, which is well supplied with corn and cattle; and two annual fairs, viz. Ascension-day, and September the thirtieth, for horses, cattle, and pedlary.

At Bachanis, or Machunnis, an island not far from Llanelly, about the year 513, St. Pizo founded a monastery, of which he was himself the first abbot.

We next entered Kydwelly, or Kydweli, situated between two small rivers, on a large bay of the Severn sea, called Tenby, two hundred and twenty-two miles from London. It is governed by a mayor, is chiefly inhabited by fishermen, and has a harbour, which is at present almost useless, being choaked up with sand.

This town is by some thought to be the place where a great battle was fought anno 458, between Ambrosius Aurelianus, with his Armoricans, and the Britons, who took part with Vortigern, after he had closely connected himself with the Saxons; but which side gained the victory, is not known. The battle is mentioned by Bede, who calls the place Catwaloph. These intestine wars lasted till the year 465, and the Britons were so harrassed, that many of them abandoned their native country, and one party in particular, going on board a galley, sailed to Germany, and rowing up the Rhine, landed at Catwiche near Leyden, where they settled by the sea-side in an old Roman camp, to which they gave the name of Brittenburge. Kydwelly was possessed for some time by the sons of Keianus, a Scot, till they were driven away by Kynedhav, a British prince. Maurice of London then invaded these territories, and after a long and tedious war, made himself master of the old town of Kydwelly, which he fortified with walls and a castle now decayed, being deserted by the inhabitants,

who, tempted by the convenience of an harbour, passed the river, and built the new Kydwelly. When Maurice above-mentioned invaded this district, Gwenhian, the wife of prince Gryffith, a woman of invincible courage, endeavouring to restore her husband's declining state, entered the field and encountered him, where she was slain, with her son Morgan, and several other noblemen.

About the year 1130, a priory of Benedictine monks, subordinate to the monastery of Sherbourne in Dorsetshire, was founded here by Roger bishop of Salisbury: it was dedicated to St. Mary, and valued, upon the dissolution, at thirty-eight pounds *per annum*. Maurice of London, one of the twelve knights that came into Glamorganshire with Robert Fitz Hamon, and had for his share the castle and manor of Ogmor; after a tedious war, as before noted, became master of Kydwelly, and rebuilt the castle. In the year 1093, Kadogan ap Blethyn, who then ruled South Wales, destroyed this, and all the castles except two, that were in the land of Cadogan and Divet. In the year 1190, Rees, prince of South Wales, rebuilt this castle, and Rees, son of Gruffyth ap Rees, demolished it; but it was afterwards built again, and underwent various revolutions till it fell to the crown. It was granted by Henry VII. to Sir Rice ap Thomas, knight of the garter; but being forfeited by his grandson Rice Griffith, it was granted to Richard Vaughan, earl of Carbery, lord president of Wales. The ruins of this castle are very large and magnificent; and plainly shew what it has formerly been.

Llangharn, Llanhern, or Talcharn, the next town we visited, stands upon the bank of the Tave, near its influx into the sea, one hundred and ninety-four miles from London. It is a tolerable well built town, has some ships belonging to it, and a small trade by sea.

Here was formerly a castle, called Abercorran, which was one of those inhabited by the Flemings, but the time of its being built is uncertain; however, it is well known, that Henry VII. granted it to Rice ap Thomas, knight of the garter: it was forfeited by his grandson, Rhys Griffith, and was afterwards granted to John Perrot, lord lieutenant of Ireland, who being attainted, it came by grant from the crown to Sir Sackville Crow, who sold it to Sir John Powell, judge of the Common Pleas, whose heirs are the present possessors. The walls seem to be entire, except in a few places; but no part of it is inhabited.

This town has a good weekly market on Fridays, for corn, flesh and fish; and one annual fair, held December the tenth, for cattle, horses, and pedlary.

Below Talcharn, the river Taff, or Tave, falls into the sea. This river was formerly famous for the Tydwyn Ar dav, or the White house on the river Taff; where Howell, a prince of Wales, in a full assembly, abrogated the laws of his ancestors, and promulgated new ones; after which a small monastery, called Witland Abbey, for Cistercian monks, was founded by Rhaefe, son of Theodore, prince of South Wales, in the time of William the Conqueror, though some assert it was founded by Bernard bishop of St. David's, in the year 1143, perhaps this prelate might have repaired it, and added to the endowment, becoming thereby in some sort a second founder. It was dedicated to St. Mary, and valued upon the dissolution at one hundred and twenty-five pounds three shillings and six-pence *per annum*.

At Kilmaen Lhwyd, not far from hence, on the borders of the county next Pembrokeshire, about the beginning of the last century, was discovered a considerable quantity of Roman silver coins, but of a base alloy, and of all the emperors from the time of Commodus, who first debased the Roman silver, to the fifth tribuneship of Gordian the third. Many of these were found to be of great value among the collectors of coins and medals. Also near Kilmaen Lhwyd, at a place called Bronyskawen, in the parish of Lhan Boydy, is a large camp called y Gaer. In the entrance of it, which is four yards wide, were discovered in the year 1292, two very rude leaden boxes, containing two hundred Roman silver coins, some of the most ancient found in Britain; they were buried very near the surface.

This camp is of an oval form, and about three hundred yards in circumference; the bank, or rampart near the entrance, is about three yards high, but in the other parts generally much lower. On each side the camp is a barrow, or tumulus; the smallest is near it, but the other at the distance of three hundred yards, and both hollow at the top.

Near Lhan Boydy is a monument consisting of a rude stone, about thirty feet in circumference, and three feet thick, supported by four pillars, each about three feet high: it is called Gwal y Vilaft, or Bwrdrth Arthur, but it does not appear by the word Arthur occurring in the name, that this monument has any relation to the famous British king Arthur; the ignorant credulity of the vulgar has attributed every object of antiquity which is great or extraordinary throughout Wales to that prince, and all with equal reason.

Leaving this place, we pursued our journey to Caermarthen, Carmarthen, or Caermardhin, so called from a derivation of the Welsh word *Caer-Vardkin*. It is a very ancient town, situated on a hill on the north side of the river Towy, two hundred and twenty-eight miles from London. The river Towy is undoubtedly the *Tabius* of Ptolemy, and Caermarthen his *Maridunum*. *Maridunum* is evidently derived from the British *Kaer-Vyrdhin* by a change of the *Vinto*. *M. Antoninus*, who terminates his *Itinerary* at this place, calls it *Muridunum*.

Caermarthen is the capital of the county, and was erected into a borough the thirty-eighth year of the reign of king Henry VIII. and made a borough and county corporate in the reign of king James I. under whose charter it is governed, by a mayor, a recorder, two sheriffs, and sixteen aldermen, who, upon solemn occasions, all wear scarlet gowns, and other ensigns of state; and are attended by a sword-bearer, cap of maintenance, and two mace-bearers. They hold a monthly court, and have the power of making bye-laws, in the same manner as the city of London. This place was anciently esteemed the capital of Wales; and when Wales was erected by the crown of England into a principality for the king's eldest son, the courts of Chancery and Exchequer were fixed here, and continued till the jurisdiction of the court and marches of Wales was taken away.

This town is situated in the best air and the most fertile soil in the county; and the people in and around it are reckoned the wealthiest and most polite in all Wales. It is well built, very populous, and much frequented. It has now but one church, dedicated to St. Peter, which is a very large one, though it had formerly a chapel, called the Rood-church, dedicated to St. Mary, standing where is now St. Mary's street; and one called the King's free chapel, in the castle. At the east end of the town, a priory for six black canons was erected to the honour of St. John the Evangelist, before 1148, of which the ruins are still visible. There was also a house of grey friars.

Caermarthen was formerly walled in, and had a strong castle, the ruins of which are still visible; but soon after the Normans entered Wales, this town fell into their hands, and for a long time encountered with many difficulties, it having been often besieged, and twice burnt, first by Griffyth ap Rees, or Rhyr, and then by Rhys, the said Griffyth's brother; but the walls and castle being afterwards repaired by Gilbert, earl of Clare, it was freed from those misfortunes. Here is a fine large stone bridge over the Towy, and a convenient quay for lading and unlading of goods, to which ships of a hundred tons burthen come up. Within these few years this has been a place of considerable trade; and by the industry of the inhabitants, it is now in a very flourishing condition. During the winter season, here is generally a company of players in town, and here are besides frequent assemblies, and other diversions.

Caermarthen is a town and county incorporated, and is governed by a mayor and two sheriffs, sixteen aldermen, clothed on solemn occasions in scarlet, a town-clerk, a sword-bearer, and two sergeants at mace. They had a new charter granted them, with some alterations,

in 1765. Here are three weekly markets, on Wednesdays, Fridays, and Saturdays; and six annual fairs, on June the third, July the tenth, August the twelfth, September the ninth, October the ninth, and November the fourteenth, for cattle, horses, and pedlars ware.

About two miles to the east of Caermarthen is Abergwilly, a village so called from its being near the place where the river Gwilly falls into the Towy. There are two fairs held here, on October the second, and on November the twenty-seventh, for cattle, horses, and pedlars ware. At this place the church dedicated to St. Maurice was made collegiate by Thomas Beck, bishop of St. David's, in the year 1287, for twenty-two prebendaries, four priests, four choristers and two clerks. Here afterwards were a precentor, a chancellor, and a treasurer; and its revenue, at the dissolution, was valued at forty-two pounds *per annum*.

At Drusllwyn, a village about ten miles east of Caermarthen, on the river Towy, are two fairs held annually, viz. on July the first, and October the fifth, for cattle, horses, and sheep. There was formerly a castle belonging to this place, which was situated opposite to it on the north side of the river.

At Tallagh, or Tylo, about six miles to the south of Caermarthen, there was a Premonstratensian abbey, founded by Rhees, the son of Gryffith, prince of South-Wales, before the year 1197: it was dedicated to the Virgin Mary and St. John the Baptist, and valued at the dissolution at one hundred and thirty-six pounds nine shillings and seven-pence *per annum*.

About two miles south-west of Caermarthen, on a lofty situation, commanding an extensive prospect of the river Towy, stands Green Castle. It is also called Castle-Mole, and is supposed to be that which is called by Dr. Powel, in his continuation of Lloyd's History of Cambria, Humfrey's Castle. It is said to be one of those built by Uchtred, prince of Merionethshire, in 1138.

To the east of Caermarthen lies Cantrebychan, which signifies the lesser hundred. In it are the ruins of Kastleh-Karreg, once a large fort, situated upon a steep and almost inaccessible mountain, near which are some vast caverns, by many supposed to have been copper mines wrought by the Romans. The place where the caverns are, is called Kaio, and has two fairs, namely, on the twenty-first of August, and the sixth of October, for black cattle, horses, and pedlars ware.

The only natural curiosity in the county is to be found at Kastleh-Karreg, which is a fountain or spring, that constantly ebbs and flows twice in twenty-four hours.

In the parish of Kaio were found two sepulchral stone monuments, at a place called Pant y Polion, near Kastleh-Karreg. One of these, we are informed by the learned annotator on Camden, lies flat on the ground, and is placed cross a gutter. The inscription on it is read as follows: "Servator Fidei Patriæque semper Amator, hic Paulinus jacet Cultor pietissimus Equi."

This being the monument of one Paulinus, undoubtedly occasioned the place to be called Pant y Polion. The other inscribed stone, which seems to be of a later date, is about a yard in height, and pitched on one end. The inscription is to be read downwards.

On the north of Caermarthen is extended Cantrenawr, or the great hundred, which was formerly a retiring place of the Britons, it being very woody and rocky, and full of uncouth ways, on account of the winding of the hills. To the south of the same town stood the castle of Laugharn already mentioned; and also on the opposite point, that of Llanfrephan, on the rocks of the sea; this last is in a great measure standing, and is seated on an high hill at the mouth of the river Towy, commanding the entrance thereof. It was built by the sons of Uchtred, prince of Merionethshire, in the year 1138. It was in possession afterwards of the Flemings and Normans, who inhabited the counties of Pembroke and Caermarthen; but Ladell, son of Gryffith ap Rhys, prince of South Wales, took it from them in the year 1145, and kept it with a few men against all the powers they could raise. It has since undergone many revolutions, till it fell to the crown.

There

There is a rude stone pillar about six feet high, and a foot and an half broad, erected near the highway, in the parish of Llan Newydd, or Llanegwad, not far from Caermarthen. On it is inscribed, in barbarous characters, "Severipini filii Severi."

In the parish of Hen-Lhan-Amgoed, situated to the north-east of Kilmaen-Lhwyd, on the western borders of the county, in a field belonging to Parkeu, is another monument nearly resembling that last mentioned: this lies flat on the ground, but probably once stood upright; if so, the inscription should be read downwards as follows: " (Sepulchrum) Caii Menvendani filii " Barcuni."

In the parish of Tre'lech, about eight or nine miles north of Caermarthen, is a remarkable barrow, called Krig y Dyrn, supposed to signify the King's Barrow. It is composed of an heap of stones, about eighteen feet high, one hundred and fifty feet in circumference, and covered with turf: it rises with an easy ascent, and is hollow on the top, gently inclining from the circumference to the center, where there is a rude flat stone of an oval form, about nine feet long, five broad, and a foot thick, covering a kind of a stone chest, consisting of six more stones. This barrow is supposed to have been the burying-place of some British prince of very great antiquity.

At St. Clare, about five miles to the south-east of Whitland Abbey, and nine miles west of Caermarthen, there was an alien priory, consisting of a prior and two Cluniac monks, subordinate to St. Martin de Campis, in Paris. It was given by king Henry VI. to All Souls College, in Oxford.

From Caermarthen we continued our journey north-west, and came next to Newcastle in Emlyn, seated

on the south bank of the river Towy, over which there is a handsome bridge, one hundred and eighty-eight miles from London. It is but an indifferent place; but it had a handsome castle; which was destroyed by fire in the civil wars: the old British name is Dinas Emlyn, which some imagine signifies the city of Æmilian. However, this is but a conjecture; for the name given to it by the Romans is uncertain, though some think it to have been the Loventium of the Dimetæ, mentioned by Ptolemy. It has a good weekly market on Fridays, for cattle, corn, and provisions; and three annual fairs, viz. June the twenty-second, July the eighteenth, and November the twenty-second, for cattle, horses, and sheep.

Remarks on the SEA-COAST of Caermarthenshire.

The only coast in this county forms a large bay, into which the Towy, and several other rivers, empty themselves. There is depth of water sufficient for ships of considerable burthen to anchor in this bay, where they ride safe from all winds, except those from the south-west. At the mouth of the river Towy is a large bank of sand, so that large ships cannot enter that river, and are therefore deprived of all shelter when storms blow between the south-west and south.

MEMBERS of PARLIAMENT for Caermarthenshire.

The county of Caermarthen sends two members to parliament; one knight of the shire for the county, and one burghers for the borough of Caermarthen.

C A R D I G A N S H I R E.

THIS county derives its name from Cardigan, the county town, and is bounded by part of Merionethshire and Montgomeryshire on the north; by part of Pembrokeshire and Caermarthenshire on the south; by part of Radnorshire and Brecknockshire on the east, and by the Irish sea on the west. It extends in length from south-west to north-east about forty miles; from east to west about eighteen miles, and is about one hundred miles in circumference.

It is divided into five hundreds, in which are six market towns, seventy-seven parishes, about three thousand one hundred and sixty houses, and thirty-five thousand inhabitants. It lies in the province of Canterbury and diocese of St. Davids.

Under the Romans, this county was part of the district inhabited by the Dimetæ, already mentioned in our account of Caermarthenshire. Some have been of opinion that the famous prince Caractacus governed in these parts, but others doubt the certainty of this, as neither Tacitus nor any other ancient author mentions it.

Soon after the Normans had conquered this kingdom, they fitted out a navy, ravaged the sea-coasts of this county, and from the time of William Rufus got possession of most of the towns, which they put into the hands of Kadugan ap Bledhin, a most prudent Briton, who had great interest throughout all Wales; and was besides much in favour with the English; but by the indiscretion of his son Owen, a rash young man, who had insulted the English and Flemings that had lately settled there, the unhappy father was deprived of his inheritance; and with his son, for whose offence he suffered, was obliged to abandon his country, and fly to Ireland. Henry I. afterwards granted the county of Cardigan to Gilbert Clare, who settled garrisons in it, and fortified several castles; but Kadugan, with his son Owen being in a short time recalled, their lands were again restored to them; the son however raising fresh disturbances, was slain by Girald, of Pembroke, whose wife Nestra, Owen had carried off. His father was prisoner in England a considerable time, but was at length again restored to his estate; soon after which he was stabbed by his nephew Madok. After this Roger de Clare obtained the possession of Cardiganshire from Henry II. but Richard, earl of Clare, his son, being slain in his way hither by Awland, Rhys, prince of South-Wales, made a great slaughter of the English, and at length reduced them under his subjection; however Cardiganshire fell afterwards by degrees into the hands of the English, without further blood-shed.

R I V E R S.

The principal rivers of this county are the Teivy, the Rydal, and the Istwyth. The Teivy or Tave is a river of Caermarthenshire, and has been described among the rivers of that county.

The Rydal rises on the south-west side of Plyn Lymmon mountain, upon the borders of Montgomeryshire, and running west-south-west, falls into the Irish sea at Aberistwyth, a market town.

The Istwyth rises not far from the spring of the Rydal, and running nearly the same course, falls with it into the Irish sea at Aberistwyth.

The less considerable rivers of Cardiganshire are, the Kerry, the Deitor, the Agran, the Arth, the Weray, and the Salek.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air and soil of this county vary in different parts; in the south and west quarters of Cardiganshire, which are more level than Wales is in general, the air is mild and temperate, and the soil fruitful; but the north and east being a continued ridge of mountains, are bleak and barren when compared with the rest; yet even in the worst parts of the shire, there is pasture in plenty for breeding large quantities of sheep and black cattle, of which there are such numbers that this country is called the nursery of cattle for all England south of Trent. It abounds in river and sea fish of all kinds, and the Trivy is famous for great plenty of excellent salmon. Coals and other fuel are scarce; but in the north parts of the county, particularly about Aberistwith, several rich lead mines were discovered in the latter end of the last century, some of which yield silver, and the ore often appears above ground. Indeed some of the ore has been so rich in silver as to produce seventy or eighty ounces in a ton of metal.

A company of Germans, in queen Elizabeth's time, worked in these mines to their great advantage; Sir Hugh Middleton also in the reign of James I. made a vast fortune here, which he afterwards spent in bringing the New River water to London. He cleared two thousand pounds a month for some years, out of one silver mine; and after him Mr. Bushel gained an immense sum of this and other mines in this county. For this reason, Charles I. allowed him to set up a mint in the castle of Aberistwith for the convenience of paying his workmen; he also made him governor of the isle of Lundy to secure his shipping. Mr. Bushel, out of the profit of these mines, it is said, made the same king a present of a regiment of horse in the civil wars, clothed the king's whole army, and lent him forty-thousand pounds. Some time after this, the company of mine adventures laid out considerable sums of money in working these mines, and met with great success, till they disagreed among themselves, which proved not only a great hindrance to the works of this county, but to mining in general.

There does not appear to be any manufacture in this county.

MARKET TOWNS.

The market towns are Lampeter, Tregaron, Llanbadarnvawr, Aberistwyth, Lhannarth, and Cardigan.

We entered this county by crossing the river Tivy, near Newcastle, and continued our journey to Lampeter, Llanbedor St. Peter, or Pont-Steffan. It is a small town, situated in a plain on the northern bank of the Teivy, over which it has a bridge leading to Caermarthenshire, one hundred and seventy-five miles from London. Though this place has not above fifty houses in it, yet it is governed by a portreeve, steward, two constables, and other officers. Here is a pretty good church, which stands on a hill, and several good inns for the accommodation of travellers. At this town the river runs west, and becomes much broader; but at length it falls over a steep precipice near Lhan Dugwydh, and makes the famous salmon leap that is the wonder of these parts. Here people often stand admiring the strength and slight the fish use to get up this cataract. It has been commonly said, that there were a great number of beavers in this river; and some modern authors seem to favour the opinion, and tell us they are now succeeded by otters. But it is very plain, that otters

former times were certainly mistaken for beavers; and particularly Belon, and other writers of natural history, have confounded the one with the other; for which reason, the members of the royal academy at Paris have taken great pains to shew the proper and true distinctions between the beaver and the otter. Hence we have not the least reason to doubt, but that Geraldus mistook one animal for the other.

Here is a weekly market on Tuesdays, which is very considerable; and six annual fairs, viz. Whitfun-Wednesday, July the tenth, first Monday in August, first Monday in September, October the nineteenth, and the first Monday in November, all for cattle, horses, sheep, pigs, and pedlars ware.

On the top of a mountain a mile or two north-east of Llanbedor, stands a stone, about sixteen feet high, three broad, and two thick, called Hyrvaen-gwydhog, which in English signifies the remarkable Colossus. This stone is now a boundary between this county and Caermarthenshire.

From Llanbedor we passed to Tregaron, situated on the bank of the Towy, one hundred and seventy-one miles from London. It is governed by a mayor, but is remarkable for nothing except having a fine church, a weekly market on Tuesdays, and an annual fair held March the fifth, for horses, swine, stockings, and pedlars ware.

About three miles to the southward of Tregaron, is a village called Lhan Dhewi Brevi. A horn of an ox is here preserved in the church, of so extraordinary a size, that at the root it is seventeen inches in circumference, it is as heavy as stone, seemingly petrified, and is said to have been preserved in the church ever since the time of St. David, who lived in the beginning of the sixth century. This horn, if it be one, is full of large cells and holes. The church is dedicated to St. David, bishop of Menevia; and at this place, Thomas Beck, bishop of St. David, founded a college, dedicated to St. David, in the year 1187, for a precentor and twelve prebendaries; its value at the dissolution was thirty-eight pounds eleven shillings *per annum*. A synod was held at this place in 522, and at a full meeting St. David opposed the opinions of the Pelagians. St. Dubricius, archbishop of Caer Lheion, having assisted at the synod, resigned his see to St. David, and betook himself to Ynys Eulhi (Bardsey island) there to spend the remainder of his life in devotion.

There have formerly been dug up several tomb-stones, with Roman inscriptions, at Lhan Dhewi Brevi, some of which consist wholly of unintelligible abbreviations; but one in a very uncouth character, upon a stone now to be seen over the chancel door of the church, is read as follows:

HIC JACET IDNERT FILIUS JACOBI QUI OCCISUS FUIT PROPTER PREDAM SANCTI DAWID.

Besides the inscriptions of the Romans, their coins have also sometimes been found here, and they frequently dig up bricks, and large free-stone neatly wrought; for which reasons Dr. Gibson thinks proper here to fix Lovantium, or Levantium, which Ptolemy places in the country of the Dimetæ; Mr. Horsley also joins with him in opinion.

Before we quit this article, we must observe, that at Lhan Dhewi Brevi, on a stone near the church door, on the outside, is an old inscription, which seems to consist wholly of abbreviations; but what it signifies we pretend not any more than others to determine.

Leaving Tregaron, we continued our tour towards Aberystwyth, and in our way visited Stratflour Abbey, situated on the Teivy, about seven miles north-east from Tregaron. This was formerly a place of great note, and called in Latin Strata Florida. Here Rhelus, prince of South Wales, built, in the year 1164, a Cistercian abbey, and filled it with monks of the order of St. Benedict. During the Welsh wars, it was burnt by Edward I. about the year 1298; but soon afterwards rebuilt by that monarch. Several of the Welsh princes were buried here, and here the records of their successions and acts, from the year 1156 to 1270, were deposited. It continued in a very flourishing condition

till the dissolution, when the annual revenues amounted to one hundred and eighteen pounds seventeen shillings and three-pence.

About eight miles to the north-west of this abbey is a village called Lhanelar, where there was a Cistercian nunnery, which was a cell to Stratflour abbey, above described. It subsisted till the dissolution, when the annual revenues amounted to fifty-seven pounds five shillings and four-pence.

Llanbadarn Vawr, which we now visited, lies about two miles east of Aberystwyth, and one hundred and ninety-seven from London. It is a place of great antiquity, though now much decayed, situated on the river Rheidal, and is generally thought to be the Mauritanea, where a monastery was built in the beginning of the sixth century by St. Paternus, who established an episcopal see here, afterwards united to St. David's. The church, which is an handsome building, is thought to have been given to St. Peter's church at Gloucester, about the year 1111, but it was in succeeding times appropriated to the abbey of Vale Royal in Cheshire.

The town is governed by a portreve, has a small indifferent harbour for small vessels, and a market on Tuesdays, but no annual fair.

Aberystwyth is situated at the mouth of the Iſlwyth, one hundred and ninety-nine miles from London. It is an incorporated town governed by a mayor, recorder, and other officers; is pretty large, rich, and populous; but has no parish-church, being only a part of the parish of Llanbadarn Vawr, above described.

Aberystwyth was formerly encompassed by a wall, and defended by a castle situated on an eminence at the entrance of the river: the ruins of which are still considerable. This castle, formerly a place of great strength, was built by Gilbert Strongbow, son of Richard de Clare, in the reign of king Henry I. It afterwards belonged to Cadwalader, son of Griffith ap Conan, who had slain Anarawd, prince of South-Wales; upon which Owen Gwineth, prince of North-Wales, burnt it in the year 1142, to revenge his brother's death. There was a garrison kept here for some time after the death of king Charles I. which the country finding to be an incumbrance, had recourse to arms to subdue it; and after a tedious siege, became masters of it. Here a mint was established by licence from Charles I. for the convenience of paying the miners.

One of the greatest fisheries in Wales is carried on in this place, but at least one half of the season is lost for want of a good harbour; for Aberystwyth bar is often so choaked up, that the smallest vessels can neither pass nor repass, and all the vessels in the harbour are obliged to lie there, till a land flood from the rivers Yſtwith and Rheidal sets them at liberty. The chief commodities of this place are herrings and other fish: lead ore, wood, timber, and oak bark. In the bay are employed, during the herring fishery, fifty-nine small sloops out of Aberystwyth, and thirty-eight more from the neighbouring places. This fishery generally begins in September, and continues three or four months. The rest of the year they are employed on the coast and Irish trade; and some few larger sloops carry lead ore, timber, and bark. On the fifth of October, in the year 1745, forty-seven fishing-boats of about twelve tons each, which were as many as could get out that tide, took among them two thousand one hundred and sixty maces of herrings, which at one hundred and twenty-six to the hundred, and five of those hundreds to the mace, amount to one hundred and thirty-six thousand and eighty: now if nine of these hundreds be allowed to a barrel of thirty-two gallons, they would make one thousand one hundred and eleven barrels, all taken in one night. This would often be the case, if there were a convenient harbour; but as it is, it supplies the middle of England with fresh herrings. During the herring fishery, they have such a glut of cod, whittings, pollacks, rays, and other fish, that they value them very little.

In this bay, at Morfuback, in the year 1732, a shoal of one hundred and thirteen porpusses, or bottle-noses, were stranded on the rocks, and left a prey to the country people, who made a considerable profit by the

oil they extracted from the blubber. The largest of these fish was about fifteen feet long, and had a slug of lead in its head, having been wounded by a gun, but not mortally. - This was supposed to have been the cause why he was pursued by the rest; who hunted him so eagerly, that they run themselves upon the rocks. For it is known that when any of these fish are wounded, the rest of the shoal will fall upon, and devour them.

Here are also plenty of monk-fish, which grow to the size of a man, and frequently raise their heads above the surface of the water: some of them weigh one hundred and sixty pounds. Their skins are very rough, and used in polishing wood and ivory. Some call it the angel fish, from the foremost fins resembling wings.

Blue sharks are likewise found in this bay; but not of that voracious nature as those in the southern climates, as they do no harm in these seas, except eating great quantities of fish.

Aberriſtwyth has also a very considerable trade in lead, there being several considerable mines of that metal in the neighbourhood; and a very large market on Mondays for corn, wool, cheese, &c. and several sorts of provisions.

At Llanvihangle gencur glyn, not far from Aberriſtwyth, we find a monument called Gwely Taleifin which should seem, from its name, to be the grave of the celebrated poet Taleifin ben Bierdh, who flourished about the year 540. It is four feet long and three broad, and is composed of four stones, that is one at each end, and two side stones, whereof the highest is about a foot above ground; we are however more inclined to think, that this, and all others of the like kind, are rather old heathen (perhaps sepulchral) monuments, and still more ancient than the time of Taleifin.

From Aberriſtwyth we passed on to Lanarth, a small town, one hundred and ninety-five miles from London. It has nothing remarkable except a weekly market on Tuesday, and an annual fair on the twenty-second of September, for black cattle, horses, &c.

After viewing the town and country in the neighbourhood of Lanarth, we passed on to Cardigan, the principal town in the county. It stands on the mouth of the river Teivy, near the extremity of the county, one hundred and ninety eight miles from London. Here is a good stone bridge over that river, which is here navigable for small vessels, to the quays. A considerable trade is carried on from this port, especially to Ireland, fifty thousand bushels of corn being annually shipped here.

Cardigan is governed by a mayor, a recorder, thirteen aldermen, and thirteen common council men, of which the mayor is always one.

Here are still to be seen the ruins of a large castle built about the year 1160, by Gilbert de Clare; but was afterwards dismantled by Rees ap Gryffyth. It stands on the steep bank of the river Teivi. Here was also a priory of black monks, dedicated to St. Mary, and subordinate to the abbey of Chertsey in Surry. At the dissolution the annual revenues amounted to thirteen-pounds four shillings and nine-pence.

Cardigan sends one member to parliament, has two weekly markets, on Tuesdays and Saturdays, and four annual fairs, viz. February thirteen, April the sixth, September the eighth, and December the nineteenth, for malt, horses, black cattle, and pedlars ware.

Near this town the Welsh obtained, in the year 1136, a complete victory over the English, commanded by Ranulph, earl of Chester; above three thousand being slain on the spot, and a considerable number drowned in the river by the fall of the bridge.

In this neighbourhood is Llech y gowres, that is, the stone of a gigantic woman, which is exceeding large, and placed on four very large pillars or supporters, about the height of five or six feet. Besides these, there are two others pitched on one end under the top stone, but much lower, inasmuch, that they bear no part of the weight. There are also three stones, two of which are large, lying on the ground at each end of the monument. At some distance is another ridge stone, which has probably some relation to it. This monument stands on an eminence in a small open field.

About a mile to the east of Cardigan lies Llan Gaedmor in which parish is an ancient monument, which consists of a stone of a prodigious size, half a yard thick and eight or nine yards in circumference. It is placed inclining; for one side of it is on the ground, and the other is supported by a pillar of about three feet high. There is another monument in Glamorganshire somewhat like this, but much longer. Near this monument is another of the same kind, but much less and lower; there are five beds of rude stones scarce two yards long, pitched on the ground, as also a circular area of the same sort of stones, whose diameter is about four yards; but most of the stones in this circle are now fallen. About six yards from it lies a stone on the ground and another beyond that at the same distance, which doubtless belonged to it.

Meinu Kyrrivol, or the numerary stones, near Neuodh, in the neighbourhood of Cardigan, seem to be the remains of some barbarous monument. They are nineteen in number, lie confusedly on the ground, and have their names from the vulgar, who cannot easily count them.

In the parish of Penbryn, on the sea-shore, about seven miles north-east of Cardigan, a British gold coin about the weight of a guinea was found by a peasant. A sufficient proof that the Britons had gold coins of their own before the Roman conquest; as the inscription on it is very different from those of the Roman, and indeed from all other coins.

Near the church in the same parish, there was found some years since, a large rude stone, as hard as marble, with an inscription; but the import of it is not known. The stone still lies on the ground near the spot where it was found: it was formerly surrounded with a large heap of stones.

REMARKS on the SEA-COASTS of Cardiganshire.

The bay of Cardigan, which is the mouth of the Teivi, and extends to Barſey island, in Caernarvonshire, is near forty miles from one cape to the other; and affords very good shelter for ships in easterly winds. The water is from seven to twenty-five fathoms deep. But there is no harbour in the whole bay capable of receiving ships of any considerable burden; so that if the wind should shift suddenly to the westward, and blow hard, it would be difficult for them to weather either of the capes if they anchored in the bottom of the bay. There are indeed several side harbours, where small vessels may find shelter. The first, reckoning from Cardigan to the northward, is called Llanranok; and lies very convenient for northerly and north-west winds; but there is not above eight feet water on the bar. The next is King's Capel, where there is about nine feet water. About six miles to the north-east of King's Capel is Aberarthe, where there is more water within the harbour than in either of the former; but the water on the bar before the harbour's mouth is often so shallow, that vessels cannot pass in, if they draw above four or five feet water. A ledge of rocks lies to the southward, and another to the northward of the harbour's mouth. Llanruffod about five miles to the north-east of the former, labours under nearly the same difficulty. The bar is not indeed so subject to changes, but the water is not so deep here as at Aberarthe. Aberithwyth harbour would afford shelter, were the depth of water always the same; but the beach is often thrown up so high on the bar, that even the smallest vessels cannot enter. Aberdovie, has but little water on the bar; but it is not so subject to shift. Bar-mouth is also subject to the same difficulty; but if the wind be at south, ships may find shelter in a small bay before the mouth of the harbour. At a small distance from the shore at Sarnaburg point, between the harbours of Aberdovie and Barmouth, lies a ledge of rocks, called Clarie, extending about a mile and a half from the land.

MEMBERS of PARLIAMENT for Cardiganshire.

The county of Cardigan sends two members to parliament; one knight of the shire for the county; and one burgess for the borough of Cardigan.

P E M B R O K E S H I R E.

THIS county, which is the south-west extremity of Wales, derives its name from Pembroke, the county, and is bounded on the east by Caermarthenshire, on the north-east by Cardiganshire, and on all other sides by the Irish sea. It extends in length from north to south twenty-six miles, from east to west twenty, and is about ninety-three in circumference. It is divided into seven hundreds, in which are one city, eight market-towns, one hundred and forty-five parishes, about four thousand three hundred houses, and twenty-five thousand nine hundred inhabitants. It lies in the province of Canterbury, and diocese of St. David's.

Under the Romans, this county was part of the territories of the Dimetæ; a particular account of whom, has been given in our description of Caermarthenshire.

A considerable tract of Pembrokeshire, consisting of the county, which lies west of Milford-Haven, and between that bay and St. George's channel, is called by the Welch, Rhos, which signifies a green field. In this district a colony of Flemings, settled by the permission of Henry I. at the time when the sea had broke through the dykes of their own country, and had done incredible damage. This district was, in Camden's time, called Little England, beyond Wales; and Giraldus, speaking of the Flemish settled here, says, they are a stout resolute nation, very offensive to the Welch by their frequent skirmishes; and observes, that they were much inured to the cloathing trade, and to merchandize, and ready to increase their stock by any labour and hazard, both by sea and land. The Fleming's way, or road, a work performed by them, may be still seen extended through a long tract of ground. The Welch, who were not well pleased with this colony, frequently attempted to drive them out, by ravaging and spoiling their borders, but without success. The annotator upon Camden informs us, that all Wales, with their united force, have several times invaded their country, but the Flemings maintained their ground, and Rhos is still inhabited by their descendants, who may still be distinguished by their speech and customs.

R I V E R S.

The principal rivers of this county are the Teivy, the Clethy and the Dougledye.

The Teivy, which is a river of Caermarthenshire, has already been described among the rivers of that county.

The Clethy rises at the foot of a hill in this county, called Vrennybawr, some miles south-east of Newport, and running south, falls into the mouth of the Dougledye, near its conflux with the bay of the sea, called by the English Milford-Haven, but by the Welch Aberdau Gledheu, or the Haven with two swords.

The name of Dougledye is a corruption of the original British words Dau Gledheu, or two swords. This river rises to the south of Fisgard, and running south-east and south, passes by Haverford-West, and falls with the river Clethy into Milford Haven.

The less considerable rivers are the Gwaine, the Biran, the Kiog, the Nevern, and the Radford.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of Pembrokeshire is esteemed very salubrious, and the soil is fertile, for here are but few mountains, and these, which are chiefly seated in the north-east part

of the county, yield good pasture for cattle and sheep: towards the sea-coast, the land extends into rich meadows and corn-fields. The country abounds with horned cattle, sheep, goats, and wild fowl of various kinds, some of which are seldom seen in any other part of Britain. These are migratory sea-birds, that breed in the isle of Ramsay, and the adjoining rocks, called the Bishop and his Clerks. Thither yearly resort, about the beginning of April, such flocks of birds of several sorts, as appear incredible to those who have not seen them. They come to these rocks in the night-time, and leave them also in the night; for in the evening the rocks shall be covered with them, and the next morning not a bird is to be seen. In the same manner not a single bird shall appear in the evening, and the next morning, the rocks shall be covered with them. They also commonly make a visit about Christmas, staying a week or longer, and then take their leave till breeding-time. Among these birds are the eligug, razor-bill, puffin and harry-bird. The eligug lays but one egg, which, as well as those of the puffin and razor bill, is as big as a duck's, but longer and smaller at one end. She never leaves this egg till it is hatched, nor then till the young one is able to follow her, and she is all this time fed by the male. This and the razor-bill, breed upon the bare rocks, without any sort of nest. The puffin and the harry-bird breed in holes, and commonly in those of the rabbits; but sometimes they dig holes with their beaks. The harry-birds are never seen on land, but when taken. All the four kinds cannot raise themselves to fly away when they are on land, and therefore they creep or waddle to the cliffs, and throwing themselves off, take wing. The eligug is the same bird, which they call in Cornwall a Kiddaw, and in Yorkshire a Skout. The razor-bill is the merre of Cornwall. The puffin is the artick duck of Clusius, and the harry-bird the shire-water of Sir Thomas Brown.

This county is well supplied with fish of all kinds; and among the rocks, upon some part of this coast, particularly near St. David's, they gather in the spring a kind of alga, or sea-weed, called laver, of which they make a sort of food, called in Welch Lhavan, and in English Black Butter. Having washed it clean, they lay it to sweat between two flat stones, then shred it small, and knead it well, like dough for bread, and afterwards make it up into great balls or rolls, which some eat raw, and others fry with oat-meal and butter. It is accounted excellent against all distempers of the liver and spleen, and some affirm, that they have been relieved by it in the sharpest fits of the stone.

Great quantity of pit-coal is found here, and culm; but there does not appear to be any manufacture.

CITY and MARKET TOWNS.

The city is St. David's, and the market towns are, Fishgard, Haverford-west, Killgarring, Newport, Pembroke, Tenby, Whiston, and Narberth.

We entered this county by crossing the bridge at Cardigan and first visited Kilgarring, or Kilgaran, a long town consisting chiefly of one street, situated upon the north bank of the Teivy, one hundred and eighty-nine miles from London; and governed by a portreave and bailiffs.

Here are the ruins of a castle, said to have been erected by Gilbert Strongbow, earl of Strygy!; but others think its foundation was laid by Roger de Montgomery. This, as well as many other castles, has undergone great revolutions,

revolutions, such as being razed, burnt and rebuilt, during intestine broils, as well as in the wars with the English. The ruins shew, that it has formerly been a strong place, some of the walls being still standing. It is at present in the possession of the family of the Prices.

Here is a handsome church, and a good harbour for boats; a salmon fishery, and also a remarkable salmon-leap at a cataract in the river. The salmon, in its way up the river from the sea, no sooner reaches the cataract, than it forms into a curve, by bending its tail to its mouth; and sometimes, in order to mount with the greater velocity, holds its tail between its teeth, then suddenly disengaging itself, springs up the precipice.

This town has a weekly market on Wednesdays, and two annual fairs, viz. August the twenty-first, and November the twelfth. The last of these is a very considerable one for cattle, horses, and pedlary.

From hence we continued our journey to Newport, called in Welsh *Treudraeth*, that is, the town in the sand. It is situated at the mouth of the river *Nevern*, which falls into the bay of Newport two hundred miles from London. This town was built by *Martin de Tours*, whose posterity made it a corporation, governed by a portreeve and bailiff. They also built a castle above the town, which was their chief seat, in the year 1215. It was afterwards in a manner demolished by *Llewellyn*, prince of South-Wales, it being then possessed by the *Flemings*. The ruins of this castle are still visible. The town of Newport is large, but the buildings are mean; it has, however, a handsome church, and the inhabitants have some trade to Ireland: notwithstanding which, it is a poor place, chiefly supported by passengers to and from Ireland. In the bay is a quarry of slates, which supplies all this coast, and not far from thence is a vein of allum earth. Here is a weekly market on Saturdays, and an annual fair on the twenty-seventh of June, for cattle, horses, and sheep. In this town was anciently a house of *Augustine* friars.

At *Nevern*, near Newport, is a rude stone in the church-yard, pitched upon one end, and about six feet high, on which is an inscription, supposed to refer to a Roman soldier, and is thus read, *VITELIANI EMERITI*. On the south side of the same church-yard, is erected a very handsome pillar, like the shaft or upright beam of a cross. It is of a quadrangular form, about two feet broad, eighteen inches thick, and thirteen feet high, neatly carved on all sides with certain endless knots, about thirty-one in number, and all of them different. The top is covered with a cross stone, below which is a cross carved on the east and west sides; and about the middle are some uncouth letters, which are perhaps the initials of the names of those persons who erected the cross.

Near *Pentere Evau*, in *Nevern* parish, are several rude stones, placed upon one end in a circular order. In the midst of the circle, which is a hundred and fifty feet in circumference, is a rude stone of a prodigious size, it being about eighteen feet in height, nine in breadth, and three feet thick, supported on three stone pillars about eight feet high, with five others, which seem at present of no use, they being too short to bear any part of the weight of the top-stone. A part of this stone, above ten feet long and five broad, is broken off, and seems to be more than twenty oxen can draw. The ground beneath is paved with flag-stones. This is called by the Welsh *Y Gromlech*, which signifies bowing to a stone; whence it has been concluded, that this was a place of worship, as were all the other circular stones of the same kind in Great-Britain and Ireland. This has been more particularly proved, with respect to the stone circles in Cornwall.

In *Nevern* parish there is another monument, commonly called *Llech-y-drybedh*, that is, the Tripod, and some name it the *Altar-stone*. It is somewhat of an oval form, and about twelve yards in circumference, placed on four stones, one of which is only two feet high, and consequently bears no part of the weight. At the south end, it is about four feet and a half in thickness, but grows gradually thinner at the other end.

At this end there is a furrow, which might serve to carry off any liquid that should run down.

Six miles north-east of Newport is *St. Dogmael's*, a village on a promontory, which forms the most northern part of this county, and is washed on one side by *St. George's Channel*, and on the other by the mouth of the *Teivy*. Here was a priory of *Benedictine* monks, seated by that river, in a vale encompassed with hills, founded by *Martin de Turribus*, a Norman, who first conquered the land about it, called *Kames*, or *Kemish*. *Robert*, the son of this *Martin*, endowed it with lands, which were confirmed to the monks by king *Henry I.* At the reformation, king *Henry VIII.* granted it to one *Bradshaw*, reserving a yearly rent to himself and his successors, and in this family it remained till the year 1640, when it was sold to *David Parry* of *Naiodd Tre-fawr*, Esq; and was lately in the possession of *Mrs. Anna Parry*.

We continued our journey from Newport to *Fishgard*, or *Fiscard*, situated on a steep cliff on the sea-shore, one hundred and ninety-nine miles from London. It derives its English name from a fishery, probably of herrings, at this place; but it is called by the Welsh *Aber Gwaine*, or the mouth of the *Gwaine*, from its situation at the influx of the river *Gwaine*, into the sea, which here forms a spacious bay. It is governed by a mayor, a bailiff, and other officers; and here vessels may lie safely in five or six fathoms water, if they have good tackle, for the ground is a strong blue clay and sand; but when the winds are northerly, they must lie close in shore. The inhabitants have a good trade in herrings, and annually cure, between *Fiscard* and *Newport*, above a thousand barrels of them. The adjacent country abounds in corn, and the town, which sends one member to parliament, has a weekly market on Fridays, but no fairs.

From hence we proceeded to *St. David's*, which has the title of a city, on account of its being the see of a bishop, though it is only a poor village. It is situated about a mile from the extremity of a large naked promontory, which projects with a very high front into the Irish sea. It is supposed to have been a Roman town, and the *Octapitarum* mentioned by *Ptolemy*, after which it obtained the name of *Menevia*. Here *St. Patrick* is said to have founded a monastery, and to have dedicated it to *St. Andrew*, about the year 470. Hither *St. David* translated the archbishopric of Wales from *Caerleon*, about the year 577, and here he built a cathedral, and became its first archbishop. After his death it was dedicated to him, and the city also took his name. This see enjoyed the archbishoprick till about the year 930, when archbishop *Sampson* withdrawing from his province on account of a pestilential disease which then raged here, carried the pall with him to *Dole* in *Brittany*: yet after this the archbishops of this see are said to have consecrated the Welsh bishops, and to have been primates of Wales, till the reign of king *Henry I.* when *Bernard*, a Norman, being made archbishop, professed subjection to the archbishop of *Canterbury*, as his metropolitan. At the suppression, this bishoprick was valued at four hundred and twenty-six pounds two shillings and a penny *per annum*. The cathedral and palace were seated within a mile of the sea, and within view (in clear weather) of the Irish hills. They are inclosed with a wall of stone one thousand one hundred yards in circumference. In this close stands the cathedral, the palace, and the houses of the dignitaries, some of which are habitable, and others in ruins. The entrance is by four gates, the principal of which leads from the town. In this gate the bishops formerly held their courts. The old church was taken down, and the present cathedral (dedicated to *St. Andrew* and *St. David*) was begun by bishop *Peter de Lein* in 1180, and completed by his successors. It is a venerable structure three hundred feet in length; the distance from the west door to the entrance of the choir is a hundred and twenty-four feet; from the choir to the altar is eighty feet; the breadth of the body of the side isles is seventy-two feet, that of the west front is seventy-six feet, and the length of the great cross-isle, from north

to south, is a hundred and thirty feet; the height of the middle isle to the vaulting is fifty-four feet; and over the middle of the church is a tower a hundred and twenty-seven feet high. The west end of the church is in tolerable repair, but the east end has suffered greatly from time and neglect, the roof having fallen in. The bishop's palace is now a large magnificent piece of ruins, of which only the walls are standing. It was built by bishop Henry Gower, about the year 1335, and had a hall eighty-eight feet long and thirty broad, with another fifty-eight feet long and twenty-three broad, and the apartments were proportionably grand and noble. There is no dean belonging to the cathedral of this place; but here is a precentor, who has the power of a dean, a chancellor, a treasurer, four archdeacons, nineteen prebendaries, eight vicars choral, four choristers, and other officers.

St. David's was anciently a considerable city, encompassed with walls, which are now demolished; but from its wild and bleak situation, with the barrenness of the country near it, has become so deserted, that it has neither market nor fair.

In 1369, John, duke of Lancaster, Blanch his wife, and Adam Hutton, bishop of St. David's, founded here a college for a master and seven priests, which was dedicated to St. Mary, and endowed, at the dissolution, with the annual revenue of one hundred and eleven pounds sixteen shillings and four-pence.

On a cliff which hangs over the sea, about the distance of half a mile from St. David's, is a stone so large, that it is said a hundred oxen could not drag it away; it is called by the Welsh *Y Maen Sigl*, or the Rocking-stone, from its having been mounted upon other stones about three feet high, and placed in such an equilibrium, that a man might move it with one finger from side to side; but the parliament soldiers, in the civil wars under Charles I. considering this stone as an object of superstition, destroyed its equipoise, and rendered it immovable.

At a place anciently called *Vallis Rosina*, supposed to be situated near *Menevia*, St. David, soon after the year 519, built a monastery for monks, whom he required to support themselves with the labour of their hands, and yet to spend a considerable part of every day in prayer, reading and meditation.

Haverford, or Haverford-West, the next town we entered, is a neat, well built, populous place, situated on the side of a hill, which forms a part of the west bank of the river *Dongledye*, two hundred and fifty-four miles from London. It is an incorporated town and county of itself, governed by a mayor, sheriff, town-clerk, two bailiffs, serjeants at mace, and other officers. The mayor of the town is admiral, coroner, escheator, and clerk of the markets, within its precincts. The houses are well built and well inhabited, and the people enjoy a good trade. Here the assizes are held, and the county-jail kept. The town enjoys several privileges, and has its own courts. There are three parish churches within the town, and one in the suburbs. St. Mary's church in the town is a very neat building, with a curious spire. Here is also a commodious quay for ships of burthen, a custom-house, and a fine stone bridge over the *Dongledye*, with a good free-school, a charity-school for boys and girls, and an alms-house. It is a rich trading place, and the town and neighbourhood abound with gentry, who render it one of the politest places in Wales. It was formerly fortified with a rampart and a castle, supposed to have been built by Gilbert earl of Clare: this castle had an outer gate, with two portcullises, and an inward gate; the walls were fortified with several towers, and it was one of those possessed by the Flemings, when they first came into Dyvet, or Pembroke-shire; but the fortifications were demolished in the civil wars under Charles I. Here was also a priory of Black canons, founded by Robert de Haverford, who gave to it several churches and tythes in his barony of Haverford, all which king Edward III. confirmed to them. About seventy years ago an effigy was dug up, which seemed to represent a bishop, and is supposed to be that of David Cherbury, bishop of Dromore in Ire-

land, and archdeacon of Brecknock, who, by his last will, dated the ninth of November, 1426, ordered that he should be interred here, and left a legacy towards rebuilding the cloysters of this priory.

This town sends one member to parliament, has two weekly markets, held on Tuesdays and Saturdays, for cattle and provisions; and six annual fairs, viz. May the twelfth, June the twelfth, July the eighteenth, September the fourth, September the twenty-fourth, and October the eighteenth, all for horses, cattle, and sheep. Without the town is a house of Black friars.

At Slebech, north-east of Haverford-West, Wize, and Walter his son, founded a preceptory of the knights of St. John of Jerusalem, before the year 1301; which, at the dissolution, was endowed with the annual revenue of two hundred and eleven pounds nine shillings and eleven-pence.

Three miles south-east of Haverford-West is *Picton-castle*, which is very ancient, and was built in the time of William Rufus, by William de Picton, a Norman knight. For want of issue male, it descended from the Pictons to the Wogans, then to the Danes, and lastly to the Philipps of Kylfant, in whose family it continued eight generations, and was lately the mansion-house of Erasmus Philips, Bart. It is remarkable that this castle continues entire, and has been always inhabited, though most of the other castles in Wales have been demolished. It was garrisoned by Sir Richard Philips, for king Charles I. in the civil wars, and held out a long siege. It is a very strong, handsome structure, considering the time in which it was erected.

To the south of Haverford-West, and on the north side of *Milford-Haven*, is *Pyllos*, where Adam de Rupe, about the year 1200, founded a priory, and placed in it monks of the order of Tyron; but in time these monks forsook the strict discipline enjoined them by their founder, and became common Benedictines. This house was dedicated to St. Mary and St. Budoc, and is said to have been subordinate to the abbey of St. Dogmael. At the dissolution, its annual revenues amounted to sixty-seven pounds fifteen shillings and three-pence.

We next entered *Whiston*, or *Wiston*, a mean inconsiderable town, one hundred and ninety-one miles from London. It is governed by a mayor and bailiff, has a weekly market on Saturdays, and an annual fair held November the eighth, for horses, horned cattle, and sheep.

From *Whiston* we passed on to *Pembroke*, situated upon a creek of *Milford-Haven*, in the most pleasant part of all Wales, two hundred and seventeen miles west by north of London. It derives its name from the ancient British word *Penvro*, a cape or promontory. It is the county town, and has two handsome bridges, over two small rivers that run into a creek, which forms the west side of the promontory. It is well inhabited, and has many good houses, and three parish churches, St. Michael's, St. Mary's, and St. Nicholas's. Here is also a custom-house. Among the inhabitants are several merchants, who, favoured by the situation of the place, employ near two hundred sail on their own account, so that, next to *Caermarthen*, it is the largest and richest town in South-Wales. It has one long strait street, upon a narrow part of a rock, and the above-mentioned rivers seem to be two arms of *Milford-Haven*, which ebbs and flows close to the town. It is governed by a mayor, bailiff, and burgeses, and was anciently fortified with walls and a magnificent castle, first built by Arnulph de Montgomery, brother to the earl of Shrewsbury, in the reign of king Henry I. It is seated on a beautiful rock, at the west end of the town. In this rock under the chapel is a vault called *Wogan*, remarkable for a very fine echo: this is supposed to have been a store room for the garrison, there being a stair-case leading into it from the castle. This structure being burnt a few years after it was erected, it was rebuilt by Owen, the son of Cadogan of Blethim. It is remarkable for being the birth-place of Henry VII. and for the brave defence made by the garrison for king Charles I. The church of St. Nicholas at the west end of the town, beyond the castle, is no more than a part of the church

formerly belonging to a Benedictine priory, called St. Nicholas of Monkton, which was founded in the year 1098, by Arnulph de Montgomery, earl of Pembroke, and given to the abbey of St. Martin of Sayes in Normandy. This being a cell to a foreign abbey was seized by king Edward III. during his wars with France. King Henry III. restored it. Afterwards it was seized again, and given by king Henry VI. to Humphry, duke of Gloucester, who made it a cell to the abbey of St. Alban's. Pembroke has given the title of earl to the several noble families of Montgomery de Clare, Marshal de Valence, and Hastings.

Pembroke sends one member to parliament, has a good weekly market on Saturdays, and four annual fairs, held on the fourteenth of May, Trinity-Monday, the tenth of July, and the twenty-fifth of September, for horned cattle, horses, sheep and cloth.

Near this town was an hospital dedicated to St. Mary Magdalen, which was valued at the suppression at only one pound six shillings and eight-pence *per annum*.

Near Stackpoole Boshier, upon the sea-coast, not far from Pembroke, is a pool of water called Boshierston-Meer, so deep, that it could never be founded, yet before a storm, it is said to bubble, foam, and make a noise so loud as to be heard at several miles distance. The banks are of no great circumference at the top; but broader downwards, and at a considerable depth, is a great breach towards the sea, which is about a furlong distant, and it is supposed to have a subterraneous communication with it.

Leaving Pembroke, we continued our tour to Narbeth, situated on the summit of a hill, on the eastern side of the county, two hundred and nine miles from London. This town had formerly a castle, the ruins of which are still visible; said to have been built by Sir Andrew Perrot, whose ancestor left Normandy with William the Conqueror. Here is a weekly market on Wednesdays, and five annual fairs, viz. March the twenty-first, June the fourth, July the fifth, September the twenty-sixth, and December the eleventh, all for horses, horned cattle and sheep.

Four miles to the north-west of Narbeth is the castle of Liehaiden, which is seated on an eminence, and was the principal seat of the bishop of St. David's, who from this castle takes his barony. About the year 1514, Edward Vaughan, bishop of St. David's, repaired it, and built a chapel in it; but in the year 1616, bishop Richard Milbourn, procured a licence from the archbishop of Canterbury to demolish it; the lead and a great part of the other materials having been sold by some of his predecessors. However, great part of the walls are still standing, and may continue for ages in their present condition.

Tenby, or Tenbigh, the next place we visited, is situated on the sea shore, 208 miles from London. It is a neat town, governed by a mayor and bailiff, and, except Pembroke, is the most agreeable of all the towns on the sea-coast of South-Wales. Besides its having a good road for shipping, it has a commodious quay, a good harbour, a large fishery of herrings, and carries on a considerable trade to Ireland, particularly in coals; for the inhabitants ship off yearly from hence seven or eight thousand chaldrons of coal and culm, and the coast of the bay abounds in iron stone. This town was anciently noted for a fishery on a bank called Will's Mark, in Bristol channel; but upon the inhabitants growing rich, they forgot the old marks of their fishing-bank, and thus lost the fishery; and though some attempts have been made to find it again, it has been without effect.

Tenby was formerly fortified with strong walls and a castle, but they are now both decayed. The ruins of the castle are still remaining, and within its view are the isles of Caldy and Lundy, which are seated to the south-west. This structure was well situated for the defence of the town and the bay. It was built by the Normans, and was taken by Rhys ap Gruffydh, prince of South Wales, in the year 1152, after which it was frequently contended for by the princes of Wales.

Here are two weekly markets on Wednesdays and Sa-

turdays, and five annual fairs, viz. Whitfun-Tuesday, the fourth of May, the twentieth of July, the twentieth of October, and the fourth of December, for horned-cattle, horses and sheep.

Tenby had an hospital or lazaret-house, dedicated to St. Mary Magdalen, and endowed at the suppression with two pounds a year.

The island of Caldey, called by the Welch Inispir, is pretty near the shore, and the north part of it is about two miles south-west of Tenby. On this little island the mother of Robert Fitz-Martin founded a priory, subordinate to the abbey of St. Dogmael, which was valued at the dissolution at five pounds, ten shillings and eleven-pence a year.

Over against this island, and at a greater distance from the shore, is the Isle of Lundy. This, says Dr. Gibson, is the larger of the two, and yet not much above two miles long and a mile broad. It is encompassed with rocks, and has only one entrance, which is so strait, that two men can hardly walk a-breast. It is full of good pasture, and has a great number of rabbits. Pigeons and sterlings flock thither in prodigious numbers to breed.

Four miles to the westward of Tenby is Mannorbear castle, which is seated on Bristol channel, and is generally supposed to have been built by the Normans, in the reign of William Rufus. It was held by the crown from the time of king Henry I. to the reign of king James I. who, by a grant, which was afterwards confirmed by his son king Charles I. gave it to the Bowens of Trelloyne, from whom it descended by marriage to the Phillipfes.

Six miles west of Tenby is Carew castle, which formerly belonged to the barony of Carew, which, with this castle, was given as a portion in marriage with Nesta, the daughter of Rees, prince of South Wales, to Gerald de Carrio, whose descendants, by the name of Carew, enjoyed it for several generations. It stands near an arm of Milford-Haven, most of the walls are still entire, which shew that it was not only a very strong, but considering the time in which it was built, a very beautiful castle.

Remarks on the SEA-COAST of Pembrokeshire.

This coast being wholly bounded by the sea on the west, has many things remarkable. We began our survey at the mouth of the Teivi, and then proceeded to Tenby, noticing every thing that merits attention.

The southern promontory of the river Teivi is called Kemaes-head; whence the coast runs south-south-east to Aberkibor haven, where small vessels often shelter themselves in north-west winds, which are often very violent on this coast; but there is not water sufficient for ships of any considerable burden.

About four miles to the south-east of Aberkibor haven, is Newport-bay, where ships of large burthen often come to an anchor, there being seven or eight fathoms water. The bay is entirely sheltered from northerly and easterly winds. Newport haven, at the bottom of the bay, affords shelter to small vessels; but the water is not deep enough to admit large ships. The southern extremity of Newport-bay is called Dinas-point: there are no rocks in this bay.

From Dinas head the coast extends to the south-ward, about four miles to Fisgard-bay, where there is room sufficient for a considerable fleet to ride safely in southerly and easterly winds; but they must not venture too near the south side of the bay, there being two large rocks, called the Cow and Calf, lying about half a mile from the shore. The southern point of this bay is called Langlas-head, from whence the coast stretches away nearly west about six miles to Strumble; where it turns to the southward about thirteen miles to St. David's head. Between these two head-lands, are two or three small bays, where coasting vessels come to an anchor in easterly winds.

Some years since, the sands on this coast having been washed away at different times, by a long continuance of stormy weather, discovered very large trees, some of

which

which having been felled, lay at full length, while the trunks of others stood upright in the places where they grew. These trees lay so thick, and in such numbers, that the shore, for a considerable space, appeared like a forest cut down. On these trees were as plainly the marks of the axe, as if they had been but just felled; but the wood was become as hard and black as ebony. Hence it appears, that great part of the coast of this county was anciently a forest; but by whom, or on what occasion, the trees were felled and suffered to remain on the spot, cannot now be known.

About two miles to the westward of St. David's head, are a dangerous ledge of large rocks, called the Bishop and his Clerks; close to the sides of which the water is fourteen fathoms deep; so that they become very dangerous to seamen in the night.

About twelve miles south-south-west from the Bishop and his Clerks, are two large rocks called Gresholm; two miles and a half to the westward of which is a ledge of rocks called the Barrel; two miles to the westward of the Barrel, are eight rocks, termed the Hats; and about four miles and a half to the westward of the latter, are six rocks called the Smalls. All these rocks, which appear at low water, render the navigation dangerous in these parts; seamen therefore, not well acquainted with this coast will do well not to come nearer the land than eighteen miles; for by keeping at that distance, they will sail to the westward of all these rocks. Near St. David's head is also an island, called Ramsay island, which, on the east, shoots out in a high promontory, but on the west is level and fruitful, and is said to have been inhabited by so many saints, that no less than twenty thousand are said, in ancient histories, to lie interred there. Though now, the passage between South-Britain and Ireland is at Holyhead, in the isle of Anglesey, it was formerly at this place, from which the passage between the two kingdoms is both shorter, safer, and more convenient, for those who have business to transact on the coast.

St. David's head forms the northern point of a large bay called St. Bride's bay, where ships anchor in about seven fathom water, and are land-locked from all winds, except those at south-west; there are no rocks or foul ground in this bay, so that there is no danger in riding here. About three miles to the westward of the southern point of St. Bride's bay, are two islands, one called Scaumer, and the other Scookam. These islands break off great part of the force of the sea from the ships riding in St. Bride's bay in southerly wind.

About six miles to the southward of St. Bride's bay, is Milford-haven, universally allowed to be the best harbour in Great Britain, and as safe and spacious as any in Europe. It has sixteen deep and safe creeks, five bays, and thirteen roads, all distinguished by their several names, in which it is said, that a thousand sail of ships may ride in perfect security, and at a sufficient distance from each other; nor is there any danger in sailing in or out with the tide, either by day or by night, from whatever point the wind may happen to blow; and if a ship in distress comes in without either anchor or cable, she may run ashore on soft ooze, and there lie safe till she is

refitted. The spring-tide rises in this harbour thirty-six feet; so that ships may at any time be laid ashore. Dale harbour is a ready out-let for small vessels, where they may ride in two or three fathoms at low water. In the reign of queen Elizabeth, before the Spanish invasion, two forts were begun at the entrance of Milford-haven, one on each side, called Nangle, and Dale block-houses, but they were not then finished. The Stack-rock rises here above water, lying near the middle of the entrance between Nangle and Dale. Penemouth is the opening of that branch of the haven, on which the town of Pembroke is seated, and where the custom-house of Milford is kept. The breadth of the entrance between rock and rock is but two hundred yards at high water, and a hundred and twelve at low water. There is a ridge of rocky ground that has the name of Carrs, which runs almost across Milford-haven, from Peter-church towards Llandstadwell, where it renders the landing-place difficult to strangers, from its not appearing at low-water. Nayland is the place where they bring woollen yarn from Ireland, and there salt is also refined and conveyed from thence over the whole country. Laureny is the place where large ships take in coal and culm, which are brought in barges from Crefwell at low-water. Veins of copper-ore have been observed in the sea-cliffs, some of which of the grey and purple kind, are very rich; there are also some yellow and sulphureous, but none of them were ever properly wrought. The great plenty of lime-stone about this haven gives the inhabitants an opportunity of improving the ground, and rendering the land more fruitful than in the other parts of the county. The great excellency and utility of this harbour is, that in an hour's time a ship may be in or out of it, and in the way between the Land's-end and Ireland. As it lies near the mouth of the Severn, a ship, in eight or ten hours, may be over on the coast of Ireland, or off the Land's-end in the English-channel; and a vessel may get out of this place to the west, much sooner than from either Plymouth or Falmouth. This harbour has been greatly improved by new works at the expence of the government.

A little to the southward of Milford-haven is Freshwater-bay, where ships often come to an anchor in easterly winds. The southern point of this bay is called Crow point; between which and St. Gowan's point are three sandy bays, where small vessels frequently come to anchor in northerly winds.

To the eastward of St. Gowan's point is a pretty large bay, where there is very good riding for ships in northerly winds, but is not much frequented. At the eastern point of this bay is Caldys Island already mentioned; and to the eastward of this island is Tenby bay, very much frequented by ships; the trade of Tenby being very considerable especially in coals, culm, &c.

MEMBERS of PARLIAMENT for Pembroke-shire.

This county sends three members to parliament; one knight of the shire for the county; one burges for the borough of Pembroke, and another for the borough of Haverford West.

G L A M O R G A N S H I R E.

THIS county derived its name from a contraction of the Welsh words Gwlad Morgan, or the county of Morgan, and is supposed to have been thus called from a prince of this part of the country, said to have been killed eight hundred years before the birth of our Saviour; but some other writers derive the name from the word Mor, which, in the British tongue, signifies the sea, this being a maritime county. It is bounded on the south, and part of the west, by Bristol channel; on the north-west by Caermarthenshire; on the north by Brecknockshire; and on the east by Monmouthshire: it extends forty-eight miles in length from east to west, twenty-seven in breadth from north to south, and one hundred and sixteen in circumference. It is divided into ten hundreds, in which are one city, seven market-towns, one hundred and eighteen parishes, about ten thousand houses, and fifty-eight thousand inhabitants.

This county, in the time of the Romans, was part of the district inhabited by the Silures, and had several Roman stations. Thus Boverton, a few miles to the south of Cowbridge, is supposed to be the Bovium of Antonius; Neath to be his Nidum, and Loghor, to the west of Swansea, to be his Leucarum.

R I V E R S.

The principal rivers of this county are the Rhymny, the Taff, the Ogmor, the Avon, the Cledaugh, and the Tave.

The Rhymny, or Remney, rises upon the borders of Brecknockshire; and running south-south-east, and separating Glamorganshire from Monmouthshire, falls into the mouth of the Severn, east of Cardiff, the county town.

The Taff rises in Brecknockshire, south of the town of Brecknock; and running south-south-east, by the city of Landaff, and the town of Cardiff, falls into the mouth of the Severn, about a mile or two south-west of the mouth of the Rhymny.

The Ogmor rises upon the borders of Brecknockshire, and running south, falls into the Severn sea some miles west of Cowbridge, a market town.

The Avon rises in the north part of the county, not far from the source of the Ogmor; and running south, falls into the Severn sea at Aberavon, south-east of Neath.

The Cledaugh rises also in the north part of this county, and running south, falls into the Bristol channel south of Neath.

The Tave rises at the foot of the Black Mountain in Brecknockshire, and running south, falls into the same sea at Swansea, a market town.

The less considerable rivers of this county are the Ely, the Eweny, the Neath, the Hefsey, the Melta, the Trangath, the Dulishe, and the Turch.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air, in the south part of Glamorganshire, towards the sea, is temperate and healthful; but the northern part, which is mountainous, is cold and piercing, full of thick woods, extremely barren, and thin of inhabitants; but the mountains serve to feed herds of cattle, and send forth streams, which add greatly to the fertility of the other parts of the county. Indeed, between the mountains, there are some fertile vallies, which afford good pasture; for the level part being more capable of cultivation, produces remarkably sweet grass, and pretty large crops of corn. The mountains yield coal and

lead-ore; and the south part is so remarkably fertile, pleasant, and populous, that it is generally stiled the garden of Wales; but has no manufacture.

REMARKS on the HUSBANDRY of GLAMORGANSHIRE.

As the soil in different parts of Glamorganshire is various, so the husbandry varies in different parts of the county. About Cowbridge and Bridgend the husbandry is perhaps the most imperfect in any part of Wales. Some farmers keep from two to four hundred sheep, yet never fold them on their lands. In this part of the county are many farms which consist of a very light sandy soil, and yet no turnips are sown. An English farmer who settled in the parish of Cantilton, near Bridgend, sowed two acres, and was at great pains to hoe them well, and keep them clean, for which he was highly ridiculed by his neighbours, who really thought him mad; but were at last surprized to see how large a crop he procured. He sold his turnips by the sack to all the adjacent towns, and gained a very considerable profit. This practice he has ever since continued with very great advantage, but has never been imitated.

The husbandmen of the county fallow and manure their lands with lime, which is done very cheap; they lay about four hundred and twenty bushels on an acre, and it lasts good four years.

Their course of husbandry is, 1. wheat; 2. barley; 3. oats; 4. fallow. Others pursue the following course: 1. wheat; 2. barley; 3. oats; 4. pease, or beans. They generally give the land three ploughings for wheat, sow three bushels, and reckon a middling crop from twenty-five to thirty bushels. For barley they plough five or six times, and consider twenty-five bushels as a middling crop. Sometimes they sow clover, and feed their hogs with it.

The farms are here in general small; some not more than thirty pounds, and the largest not above a hundred a year. The grass land about Cowbridge lets at about twenty shillings, and the arable at ten shillings the acre. Where the soil is more sandy, there is a great deal lett at five shillings. They use oxen in general for the greater part of the work and tillage.

PRICE OF LABOUR.

Those who have constant work, a shilling a day.

An ox boy to drive, from three-pence to four-pence a day.

Reaping wheat, from four shillings to four shillings and six-pence the acre.

Mowing corn, one shilling and six-pence, and small beer.

Mowing grass, one shilling and eight-pence, and drink.

CITY, and MARKET TOWNS.

The city is Llandaff; and the market towns are, Cardiff, Cowbridge, Llantrissant, Bridge-End, Neath, Swansea, and Penrife.

After viewing every thing remarkable in Pembroke-shire, we embarked on board a small vessel at Tenby, and landed at Oxwich-bay in Glamorganshire, from whence we passed to Penrife, or Penryse, situated near the sea-coast, one hundred and eighty-seven miles from London. This town has a good harbour for ships, and formerly here was a castle; a considerable part of the ruins are still remaining, by which it appears to have been a strong and handiome structure. Here is a weekly market on Thursdays, and four annual fairs, viz. May the

the seventeenth, July the seventeenth, September the seventeenth, and December the first, for cattle, sheep, and hogs.

Among the curiosities of this county is a promontory near Penrife, the most westerly point of Glamorgan-shire, called Warmhead-Point; it runs about a mile into the sea, and at half flood, the isthmus, which joins it to the main land, is overflowed, so that it is rendered a small island. Near the extremity of this point is a cleft or crevice in the ground, into which if dust or sand be thrown, it will be blown back again into the air; and if a person applies his ear to the crevice, he will plainly hear a deep noise, like the blowing of a large pair of bellows. These phenomena are attributed to the undulatory motion of the sea, under the arched and rocky hollow of the promontory, which occasions an alternate inspiration and expiration of the air, through the cleft.

On a mountain, called Kevn-Bryn, about two or three miles to the north of Penrife, is a monument, consisting of a rude stone of a prodigious size, called Arthur's stone, supposed to weigh upwards of twenty tons, and yet is supported by a circle of six or seven other stones, each about four feet high. These are all of the mill-stone kind.

At Llangenith, not far from Penrife, Roger de Bellamont, earl of Warwick, founded a priory in the time of king Stephen, which he annexed to the abbey of Taurinus, at Evreux in Normandy. It was dedicated to St. Kenned, and being seized by an alien priory, was granted by king Henry VI. in the year 1441, to All Souls college in Oxford.

From Penrife we passed on to Swansey, or Swine-Sea. This town derives its name from the porpoises or sea-hogs, which are found in great numbers in Swansey bay. It is called by the Welsh Aber-Tawi, from its situation at the mouth of the river Tavye, or Tawi, two hundred and two miles from London.

Swansey is a large, clean, well built town, with an exceeding good harbour, where sometimes a hundred ships at a time come in for coals and culm. This last is the dust of the coal, which, when made up into balls, make a sweet and durable fire, with little smoke. This town carries on the greatest trade of any in the county, particularly in coals, there being several large coal-pits in the neighbourhood; and from this place coals are sent both to Ireland, and to all the port-towns of Cornwall, Devonshire, and Somersetshire, which renders the inhabitants of the town and its neighbourhood rich and populous.

Henry de Gower, bishop of St. David's, in the year 1332, founded an hospital in this town, which was dedicated to St. David, and valued, upon the suppression, at twenty pounds *per annum*.

At Swansey is a mineral spring, the only one in the county; the water of which has an acid stiptic taste like alum, though the predominant salt is a martial vitriol. It turns blue with vinegar, and will not curdle with milk. A gallon of this water yields forty grains of sediment, of a highly acid, stiptic, vitriolic taste, and a light brown colour, which will ferment with spirit of hartshorn, and oil of tartar. It is good in loofenesses, and will staunch blood externally in wounds.

Here are two weekly markets held on Wednesdays and Saturdays, and five annual fairs, viz. July the thirtieth, August the twenty-ninth, October the nineteenth, and the two following Saturdays.

In the neighbourhood of Swansey are some very considerable copper, lead, and tin-works, in which above five hundred hands are employed. These works were established on account of the cheapness of coals and labour, for the copper and tin are brought over from Cornwall.

We continued our journey from hence to Neath, called by the Welsh Nidgh, and supposed by Camden to be the Nidum of Antoninus. This was formerly a place of much greater extent than it is at present, though it is still a large town of no inconsiderable note. It is situated on the river Neath, over which is a stone bridge, one hundred and sixty-eight miles from London; and is

governed by a portreeve, who is chosen annually, and sworn by the deputy constable of an ancient castle here, called Neath Castle, which stands on the opposite side of the river. Here is a Haven for small vessels, and a good trade in coals, great quantities of which are dug up in and about the neighbourhood.

This town has a weekly market on Fridays, and three annual fairs, viz. Trinity-Thursdays, July the thirtieth, and September the twelfth, for cattle, sheep, and hogs.

Richard de Granville, and Constance his wife, in the reign of Henry I. built a Cistercian abbey on the river Neath, about half a mile from the town, and dedicated it to the Holy Trinity, and afterwards returned to England, where he had a plentiful estate. At the time of the dissolution, its yearly value was one hundred and thirty-two pounds. There are only the ruins of some lofty walls standing.

At Llanyltyd, near Neath, St. Ilutus, in the year 508, founded a monastery, which became a seminary of literature as well as religion.

About two miles to the north-west of Neath is Morgan. Robert, earl of Gloucester, in the year 1147, founded an abbey for Cistercian monks, dedicated to the Virgin Mary, which was valued at the dissolution at one hundred and eighty-one pounds a year; but it is now a gentleman's seat.

On the top of a hill, called Mynydd-Margan, is a pillar of exceeding hard stone, about four feet high, and one broad, with the following inscription in a rude character, BODVOCVS HIC JACIT, FILIVS CATOTIS, IRNI PROMEPVS ETERNALI VE DOMAV, i. e. Pronepos eternali in domo. The common people in the neighbourhood affirm, that whoever reads the inscription will certainly die soon.

By the highway, south of Morgan, is a monument of stone, with this inscription: PVMPEIVS CARANTORIVS. This is doubtless the tomb-stone of one Pompeius Carantorius, though the Welsh, by adding and altering some letters, read it thus: PVMP. BVS. CAR. A'N. TOPIVS; or, The five fingers of our friend killed us. They call it Bedh Morgan Morganwg, which signifies the sepulchre of prince Morgan, and believe, that a prince named Morgan, who, they say, was killed eight hundred years before our Saviour's time, was buried here.

Near Lhan Gadok, north-east of Neath, there is a monument called Maen dare Lygad yr ych, consisting of two small circular intrenchments, like cock-pits, one of which had formerly in the center of it a rude stone pillar, about three feet high, with an inscription, which should be read downwards from the top, and is as follows:

MARCI, or MEMORIE, CARITINI FILII BERCII.

Leaving this place, we proceeded next to Bridge-End, a small town, one hundred and eighty miles from London, situated on the river Ogmore, which divides it into two parts, that are again joined by means of a stone bridge. This town is remarkable for nothing but a considerable weekly market held on Saturdays, and two annual fairs, viz. Holy Thursday, and November the seventeenth, for horned cattle, sheep, and hogs.

At Newton, near Bridge-End, north-west of the mouth of the Ogmore, is a very remarkable spring, about eighteen feet in circumference, the water of which sinks at high tide nearly to the bottom; and at the ebbing of the sea it rises almost to the brim. In order to account for this phenomenon, it has been supposed, that at high water the air in the veins of the spring, not being at liberty to circulate, by its being pent up, the water is prevented from issuing out; but when the sea retires from the shore, and frees these natural aqueducts from these obstructions, the water is at liberty to issue through them.

Not far from Bridge-End is Aberavon, situated on the river Avon, about two miles from the sea. It is a borough town, about two furlongs in length, governed by a portreeve, but has neither market nor fair.

We continued our tour from hence to Llantriffent, situated in a hilly part of the country, one hundred and forty-nine miles from London. It is an ancient borough,

governed by a portreeve, who is sworn by the deputy constable of the castle. Here is a small market on Fridays, and three annual fairs, viz. May the first, August the first, and October the eighteenth, all for cattle.

Cowbridge, the next town we entered, is situated in a low but fruitful soil, one hundred and seventy-five miles from London. The Welsh call this place Pont-Van, from the stone-bridge over the river Ewenny, on which it stands. It is a neat, clean, well built, and well paved town, where the justices keep their quarter sessions for the county the week after Easter, and is governed by a bailiff sworn annually by the deputy constable of the castle of St. Quintin, near adjoining. Here is a harbour for boats, a well frequented weekly market on Tuesdays, for corn, cattle, and provisions; and three annual fairs, viz. April the twenty-third, August the first, and October the eighteenth, all for cattle.

At Llancarvan, about three miles from Cowbridge, St. Cadocus is said to have built a monastery in the year 500.

And at Ewenny, which is also near Cowbridge, Sir John Londres built a Benedictine priory, which was given by Maurice de Londres in 1141, as a cell to Gloucester abbey. The time of its foundation is unknown; but it appears to have been dedicated to St. Michael, and valued, at the suppression of religious houses, at seventy-eight pounds a year.

At Lantwitt, a village, also at a small distance from Cowbridge, are the foundations of many buildings. This is said to have been an ancient, large borough town, that had a market kept on Sunday mornings, which is now discontinued, but it has still a fair on the eleventh of June, for lambs. In the church-yard of this village, and on the north side of the church, there are two stones erected, the first of which is near the church wall, of a pyramidal form, and about seven feet high. It is adorned with old British carving, and at three several places, at equal distances, is encompassed with three circles. These circular monuments are supposed to have been temples of the Druids. This might have been thought such, did it not differ from the old monuments, with regard to the carving. The other stone is also very much carved, and was once the shaft or pedestal of a cross. On one side there is an inscription, showing that one Sampson set it up, and on another, that it was dedicated to St. Ilhtub.

Five miles south-west of Cowbridge, near Nashpoint, stands St. Donat's castle, the habitation of the ancient family of the Stradlings, near which there are dug up several ancient Roman coins, among which were some of Æmilianus and Marius, which are very scarce. This is seated on an eminence, having a fine park to the west, and on the south pleasant gardens, descending in terrasses from the castle wall, to the Severn sea. It is at present in the possession of the family of the Manselo, and is a large, elegant building, which makes a noble appearance, though different parts of the structure are extremely antique.

From Cowbridge we proceeded to Landaff, which signifies a church on the river Iaff. It is a small town in a low situation, one hundred and forty-six miles from London. Notwithstanding the meanness of this place, it is dignified with a bishop's see, and adorned with a cathedral, which is a fine structure. It was made a bishop's see about the year 490, by St. Jubricius, who was succeeded by St. Tilliau, to whom the church is dedicated. Bishop Urban, about the year 1120, rebuilt the church, with two towers at the west end, eighty-nine feet high, of which that at the south now remains, though two of its pinnacles were thrown down by the storm in 1703. The north tower was pulled down and rebuilt in an elegant manner, one hundred and five feet high, in the reign of Henry VII. at the expence of Jasper, duke of Bedford, but the pinnacles and battlements were demolished by the above-mentioned storm. The body of the cathedral has been lately rebuilt, and is two hundred and sixty-three feet and a half in length from east to west: the distance from the west door to the choir is one hundred and ten feet: the length from the choir door to the altar is seventy-five feet; and the distance

from thence to the farther end of what is called St. Mary's chapel, is sixty-five feet. The body of this church is sixty-five feet broad; and the height from the floor to the top of the compass-work of the roof is also sixty-five feet; and to the top of the middle isle, above the pillars fifty-four feet. The choir is very neat; but in this church there is no cross isle, as there is in all the other cathedrals in England and Wales; nor is there any middle steeple, as there is in all the cathedrals besides, except Bangor and Exeter.

This town has a weekly market on Mondays, and two annual fairs, viz. February the ninth, and Whit-Monday, for cattle and stockings.

Leaving this place we passed on to Caerphilly, situated in a moorish bottom, not far from the Rhymny, one hundred and fifty-five miles from London. It is an ancient borough; but remarkable only for its ruinous castle, which is thought to be the noblest remains of ancient architecture now in Great-Britain; and exceeds all in bigness, except that of Windsor. The hall, or as some people think it the chapel, is a stately room, about seventy feet in length, thirty-four in breadth, and seventeen in height. On the south side is an ascent to it, by a stair-case, about eight feet wide, the roof of which is vaulted, and supported by twenty arches, which, as you ascend, rise gradually one above another. The entrance into the room from this stair-case is not in the middle, but somewhat nearer to the west end. Opposite to the stair-case, on the north side of the room, is a chimney about ten feet wide, on each side of which are two windows resembling those of churches, only they are continued down to the very floor, and rise higher than the hall is supposed to have done; so that the room above the hall was enlightened by them. The sides of these windows are adorned with sculpture of leaves and fruit. In the walls, on each side of the room, are seven triangular pillars placed at equal distances. From the floor to the bottom of the pillars, is about twelve feet and a half. Each of these pillars is supported by three busts, which vary alternately: for the first is supported by the head and breast of an ancient man, who has a beard, with two young men on each side, all with dishevelled hair. The next has the face and breasts of a woman, with a lesser face also on each side; the middlemost, or biggest, has a cloth tied close under the chin, and about the forehead: the smaller figures have folded cloths, but none under the chin, and all have braided locks. The use of these pillars seems to have been to support the beams: there are also, on the south side, six grooves or channels in the wall, at equal distances; these are about nine inches wide, eight or nine feet high; and four are continued from the tops of the pillars; but the two middlemost are about the middle space between the pillars, and come down lower than the rest, having neat stones jetting out at the bottom, as if intended to support somewhat placed in the hollow grooves. At the north side, near the east end, there is a door about eight feet high, which leads into a spacious green, about seventy yards long, and forty broad. At the east end there are two large arched doors, within a yard of each other; and there was a third near the south side, but much larger; and another opposite to that on the west end. This was the state of this room, at the time of the first edition of Gibbon's Camden; and the annotator was so very particular, that he might enable persons to judge of the antiquity of the place, which, as far as he could meet with information, is beyond the reach of history.

Among the many stupendous pieces, of which this vast pile of ruins is composed, is a large tower nearly towards the east end, which every moment threatens destruction to the unwary passenger. Its height is not by a great deal so much as that of Pisa, in Italy, it being not above seventy or eighty feet at most; but from the top down almost to the middle, runs a large fissure, by which the tower is divided into two separate parts, so that each side hangs over its base, in such a manner, that it is difficult to say which is most likely to fall first. According to the opinions of the late ingenious Mr. Wood of Bath, who lay upon his back for several minutes to view this dreadful ruin, its lineal projection, on the outer side, is not less than ten feet and a half. What

renders it still the more remarkable is, that it has continued to project in this manner for many ages; nor have we the least account given us, either from history or tradition, how it first happened.

This castle is generally thought to have been originally built by the Romans, though it does not seem to have any resemblance to their style of architecture; and besides, almost all the Roman cities, or forts, afford either Roman inscriptions, statues, bricks, coins, arms, or other utensils; but it does not appear that any such things were ever discovered here. There have indeed been two coins found in this castle, one of which was silver, and the other brass; but neither of them are either Roman or English, and therefore are probably Welch. That of silver is as broad, but thinner than a six-pence, and exhibits on one side the image of our Saviour, with a Latin inscription, which signifies, Glory be to thee. On the other side the legend probably means, the money of the country of Gwynedh, that is, North Wales. The brass coin is like the French pieces of the middle age.

Caerphilly has a weekly market on Thursdays, and seven annual fairs, viz. April the fifth, June the sixth, July the nineteenth, August the twenty-fifth, October the ninth, November the sixteenth, and the Thursday before Christmas, for horned cattle, horses, sheep, hogs, and yarn stockings. Besides the first Thursday in March, and the first Thursday in May called Great Markets.

On a mountain not far from Caerphilly, is a remarkable monument, known by the name of Y Maen Hir; this is a rude stone pillar, of a kind of quadrangular form, about eight feet high. It is not erect, but somewhat inclining; and close to its bottom, there is a small bank or intrenchment, inclosing the space of six yards, and in the midst of it is a square area. There is an inscription on the pillar in Welsh, which signifies, Mayst thou awake; from whence it is thought to be a funeral monument.

Leaving Caerphilly we pursued our journey to Cardiff or Caerdiff. This name signifies a city on the Taff, on which river the town is situated one hundred and sixty-three miles from London. It is a pretty large, well built town, and esteemed the headmost in all South Wales. The soil round it is remarkable rich, yields prodigious crops of corn, and produces excellent pasture.

The ground about it is level; but at the distance of three or four miles, it is surrounded with pleasant hills, that yield a delightful prospect. There is a handsome bridge over the river Taff, to which vessels of small burthen may come up; and a commodious harbour, by which the inhabitants carry on a good trade to Bristol, and other places. The houses are well built, and the streets clean and in good order. The town consists of two parishes, though at present it has but one church; for the other, above a hundred years ago, was undermined by the river, and the greatest part of it fell down. It is enclosed by a wall, which has four gates, and has a castle, which is a large, strong, stately edifice, the constable of which is always the first magistrate of the town.

This castle, together with the walls, was built by Robert Fitz Haimon, a Norman, about the year 1100, who held here his courts of justice, and kept a strong garrison, his twelve peers or knights being obliged to defend their several stations. In this castle Robert Curthose, eldest son of William the Conqueror, was imprisoned by his brothers till his old age, having first been deprived of his eyes, as well as of his hopes of the crown. It was taken by Maelgon, and Rhys Gryg, with prince Llewellyn's forces, in 1131. It is now a lordship, belonging to the right honourable the lord viscount Windsor.

The town is an ancient corporation, governed by a constable, two bailiffs, twelve aldermen, twelve capital burghesses, a steward, a town-clerk, and other officers. This being the county-town, a court of record is held here every fortnight, of which the bailiffs, who are also justices of the peace, are the only judges; and the assizes for the county are always held here.

Robert earl of Gloucester, who died in the year 1147, founded here a priory.

Here are two weekly markets, held on Wednesdays and Saturdays, the latter of these is by far the best, being well provided with corn, horned cattle, sheep, hogs, and all sorts of provisions. Here are also three annual fairs, viz. June the twenty-ninth, September the eighth, and November the thirtieth, all for cattle.

Without the east gate of this town is a large suburb, called Cockerton; where was a house of Grey Friars dedicated to St. Francis. Without the north gate stood the White Friars; and without the west gate is another small suburb, adjoining to which was a monastery of Black Friars.

CURIOUS PLANTS found in different parts of WALES.

Great sea stock gilly flower, with a sinuated leaf. *Leucoium maritimum sinuato folio*, C. B. Found on the sandy shores about Abermenai ferry.

Small vernal star hyacinth. *Hyacinthus stellaris bifolius Germanicus*, C. B. Found among the buithes in Bardsey island.

Alexanders, or Alifanders. *Hipposelinum Theophrasti sive Smyrnum Dioscoridis*, C. B. Grows on the rocks about Priestholm island.

Sea Cudweed, or Cotton weed. *Gnaphalium maritimum*, C. B. Grows on the sand near Abermenai ferry.

Dwarf sea-fern. *Felix petraea ex insulis stæchadibus*, C. B. Grows on the rocks in Priestholm island, and on Lhan dwyn, in Anglesea.

Small round leaved Scurvy-grass. *Cochlearia minor rotundifolia*, Ray. This plant is to be met with in the neighbourhood of Beaumaris.

English wood, bitter vetch. *Orobis Sylvaticus nostras*, Ray. Grows below Brecknock-hill, in the way to Cardiff.

Club-moss, or wolves-claw. *Muscus clavatus, sive Lycopodium*, Pack. Grows in the mountains of Brecknock.

Low creeping mountain welsh sorrel, with a round leaf. *Acetosa Cambro Britannica montana*, Park. Grows on moist rocks, and by rivulets on Snowdon.

Mountain Bugle, or middle confound. *Bugula cærulea Alpina*, Park. This plant was found by Dr. Johnson, on Carnedh Shewellin.

Purple Mountain or Water Avens. *Caryophyllata aquatica nutante flore*, C. B. This plant is met with on Snowdon.

English soft, or gentle Thistle. *Cirsium Anglicum*, Ger. On the high rocks about Snowdon.

Mountain dwarf Juniper. *Juniperus minor montana folio latiore, fructuque longiore*, C. B. This grows on Snowdon-hill.

Greater rough Spleenwort. *Lonchitis aspera*, C. B. This is a rare plant, but may be met with in rifts and chinks of rocks in Snowdon.

Upright fir-moss. *Muscus erectus Abieti formis, terrestri rectus*, J. B. is also met with on Snowdon.

Mountain heath-like sengreen with large purple flowers. *Sedum Alpinum Ericiodes cæruleum*, C. B. Found plentifully on the rocks of Snowdon; and by the sides of rivulets.

Small mountain seagreen, with jagged leaves. *Sedum Alpinum trio folio*, C. B. Found on the same mountain with the above.

Small leaved mountain chickweed, with a fair flower. *Auricula muris pulchro flore, folio tenuissimo*, J. B. Grows on the steep rocks of Snowdon.

Branched English black maidenhair. *Tricomanes ramosum*, J. B. Is to be found in the same places, viz. the rocks of Snowdon.

Yellow wild bastard poppy. *Argemone lutea Cambro-britannica*, Park. Found in the road between Denbigh and Guidar, and in several other places.

Hairy mountain moufe-ear chickweed, with a large flower. *Caryophyllus holosteus Alpinus angustifolius*, C. B. Found plentifully on a rock called Clegwyn y Garnedh, near Lhanberys in Caernarvonshire.

REMARKS on the SEA-COASTS of Glamorganshire.

We shall begin our remarks at Whitford point, the northern cape in this county; and which joins to Caermarthen shire. About a mile and a half to the south-west of Whitford-point, is a small island, called the Home, separated from the main land by a very channel of water. This island forms the northern point of Roshilly bay, where ships bound to Carmarthen, Tenby, or Milford Haven, often come to an anchor in north-east winds.

The southern cape of Roshilly-bay in Wormshead, a little to the southward of, which is a large shoal, called Helwix-sand. It is about two miles and a quarter in length of an oval form, and about three quarters of a mile in breadth. There is not above six feet water on this shoal; but there is a channel between the shoal and the sand about half a mile in breadth, where there are seven fathoms water.

About three miles east-south-east of Worms-head, is Oxwich-point, which forms the western point of Oxwich-bay, where ships often come to an anchor, there being from one to seven fathoms water; and the bay defended from all winds, except those at south-east.

About a mile and a half to the eastward of Oxwich-bay, is the Mumbles-point, at the extremity of which are about eight or ten rocks, extending about a quarter of a mile from the shore. This is the western point of Swansey bay, where ships very frequently come to an anchor, especially those bound to Swansey and Neath; for as they are both tide harbours, ships bound thither are obliged to wait till a proper time of tide, which they generally do in Swansey bay. The water in this bay is from one to five fathoms deep.

Swansey harbour, as we have already observed, is only a tide-harbour; but as the water rises near sixteen feet, ships of an hundred tons may enter at high-water; small vessels pass up much higher; and boats to the Forging mills, five miles above Swansey.

The harbour of Neath is also a tide harbour, but ships of considerable burden go up to Neath quay, about three miles above Neath.

About a mile and a quarter to the south-east of the Mumbles point, is a large sand, called the Searwater, on which there is not above a fathom and a half at low water. It is about two miles in length, and nearly one in breadth. Three quarters of a mile south-east-by-east of the Searwater, is a northern shoal, called Noze sand. It is near two miles long, and above half a mile broad; and is dry at low water. There is a channel between these sands and the shore, about half a mile broad in the narrowest part; where the water is from five to seven fathoms deep: but ships rarely pass this way, unless the master or pilot be acquainted with the coast.

About half a mile to the eastward of the eastern extremity of the Naze sand is Nash point; and about five miles to the eastward of Nash point, are two small islands called Barry and Scilly, both of them close to the land. The coast of Wales changes here from east to west, to north-west, by north and south-west-by-south. And about four miles from Scilly island, is the mouth of the Tawe, or Tals, where Cardiff is situated. Small vessels pass up to that town, and boats go up to Landaff. At

the former a considerable trade is carried on, but the latter has extremely little.

About a mile and three quarters to the eastward is the mouth of the Rhyminy, which may be entered by small vessels; but is rarely frequented.

MEMBERS of PARLIAMENT for this County.

Glamorganshire sends two members to parliament; one knight of the shire for the county; and one burges for the borough of Cardiff.

By desire of the majority of our subscribers, whose favours we thankfully acknowledge, and whom at all times we would willingly oblige, we have added a description of Scotland; together with its ancient and modern state of its laws, religion, government, trade, manufactures and commerce, together with the manners and customs of the people; the universities, courts of justice, and public schools; the present state of learning and religion in that kingdom, and the manner of proceeding in their civil and ecclesiastical courts: to which will be added a description of the islands of Ebudea and Hebrides, with those of Orkney and Shetland.

Every person will be convinced that this addition to the work, must be of great advantage to the reader. He will in one book have an account of every thing worth notice, not only in the whole island of Britain, but likewise a description of the smaller ones with which it is in a manner surrounded, and which may be considered as so many jewels in the crown of our sovereign.

England and Scotland are now happily united under one government, and consequently form one body of people, whose interests are inseparably connected. Their domestic manufactures, and foreign trade, are the joint property of the whole; nor has any part of the island, a separate interest from that of the other.

From such necessary connections it often happens, that those who live in one part of the kingdom are under the necessity of being acquainted with the other; the nature of commerce requires it; and even those who are no way concerned in trade may be stimulated by a curiosity peculiar to human nature to be informed concerning the more remote parts of the island.

To gratify the curiosity of our readers, and also to make the work as complete as possible, we have been enabled to add a description of Scotland, without any additional expence to the subscribers; a circumstance we hope cannot but recommend us to their favour on any future occasion.

Although this part of our work is small in comparison of the other, yet it has been attended with a considerable expence, and the materials collected from the best writers on the subject, and revised by a gentleman who resided long in that country.

Upon the whole, we have endeavoured to make this work as complete as possible; and as it contains a complete description of the whole island of Great Britain, &c. we doubt not but it will be considered as superior to any thing of the kind hitherto published.

S C O T L A N D.

SCOTLAND is that part of Great Britain which formerly comprehended the Picts and Caledonians; but has since the Union been called North Britain. It is the northern part of the main island, which comprehends England and Wales, and with these constituting one united kingdom ever since the fifth of Queen Anne in the year 1707; and that by the consent of the parliaments of both kingdoms. By this coalition they are now in conjunction styled Great Britain, and are under the same government of one king and parliament, with a reserve of all the statute and municipal laws of Scotland; and other privileges, &c. prior to that æra: so that the legislation, which formerly was vested in the king and parliament of Scotland, independently of those of England, being removed and placed in one general parliament of Great Britain (sixteen peers from Scotland representing their nobility, and forty-five members their gentry and commonalty,)—the laws in common are now passed by the two countries in conjunction.

All that part of the main island north of Cumberland and Northumberland, two of the most northerly counties of England, belongs to Scotland; together with a great number of islands, particularly on the western, south western, and northern sides, as the Æbude, Orkades, Shetland, &c. It has the Irish sea on the west, the Deucealedonian on the north, and that part of the German ocean on the east, which in our maps is called the British or North sea. It is about three hundred miles long from north to south, and from fifty to one hundred and fifty in breadth from east to west, being indented, and nearly cut through in many places by bays or friths of the sea, as they are called, forming excellent harbours, at the ends and on the sides of which are several considerable rivers, besides lesser streams, abounding with fine salmon, trout, eels, and flounders.

Scotland, exclusive of its islands, lies between latitude fifty-four degrees thirty minutes, and fifty-nine degrees thirty minutes north, and between longitude one and six degrees west. The longest day is upwards of eighteen hours, and the shortest night five hours forty-five minutes, and in some of the Shetland isles less. The number of its inhabitants Templeman reckons one million five hundred thousand, which is half a million more than he computes in Ireland, though exclusive of the isles he makes the latter to contain more ground. The soil in general does not come up to that of England in fertility; not but that some counties, particularly the Lothians, Fife, Buchan, Angus, Mearns, Aberdeenshire, Ross, Murrayland, &c. have good store of grain, with which they trade to Spain, Holland, Norway, &c. The skirts of the country, especially northward, abound with timber, particularly fir-trees, &c. of a vast magnitude.

The air is very temperate, and not half so cold as might be imagined in so northerly a climate. This, as in England, is owing to the warm vapours and breezes which come continually off the sea; and likewise purify the air, and puts it in such a constant agitation, as keeps the inhabitants from any remarkable epidemic distempers. Great part of the country, particularly towards the north and west, including the Grampian hills, is mountainous,

hilly, and heathy; but yielding good pasture in several places: between the higher grounds are many rich valleys, and always a stout stream both in the north and south parts, which produce corn and cattle; but the latter, with the horses, are mostly of a small breed. Great numbers of the black cattle are driven into England, and there being sold lean, after fattening in the English pastures, they furnish the London markets with delicate beef.

Scotland likewise breeds great numbers of sheep, many of which are sent into England, as is the greatest part of their wool. It has also a very good fishery of herring, cod, ling, salmon, &c. great quantities of which are exported, besides great plenty of haddock, whiting, skait, &c. with a variety of shell-fish, as mussels, wilks or periwinkles, cockles, clams or scallops, oysters, &c. for home-consumption.

Scotland has the advantage of England both for catching of herring sooner, and curing them better; the pickled herring of Glasgow, Lochbroom, &c. being equal to those of the Dutch: their situation for exporting them is likewise more commodious; so that they can be sooner at market than the Dutch, the Glasgow merchants on the coasts of Spain, Portugal, and up the Straights; as the merchants of Dundee, Aberdeen, &c. on the Eastern coast, in the Baltic, and German ocean.

The Scots have manufactures of cloth, woollen stuffs, particularly plaids, some of variegated colours, others of scarlet, either of wool or silk, and finer than those made in any part of Britain. These are chiefly manufactured at Edinburgh; as are stockings, &c. at Aberdeen. Besides striped muslins, cambrics, and those tolerably fine, the main article of the Scottish manufacture is linen-cloth, vastly encouraged and improved by virtue of premiums, &c. within these few years; especially by the taking off the duty on it in England, and the prohibiting the wear of printed calicoes: for vast quantities of it are not only sent to England, but exported to our British colonies in North America. Vast quantities of the above goods are manufactured at Glasgow, where, and in the neighbouring towns, above fifty thousand men are constantly employed, besides women and children.

Scotland is said to have this advantage to boast of, which neither England, nor hardly any nation in Europe has, namely, that in every branch of its trade with other countries, the balance is on its side; that is, she sends out more commodities in value than she receives back; and consequently the difference or overplus must be made good in specie.

It is likewise observed, that by their late increase of commerce, the Scots have very much augmented their shipping; and yet they either build or buy vessels continually, more especially for the West-India, and the southern commerce.

Learning flourishes among them in five universities; namely, St. Andrew's, Glasgow, two at Aberdeen, and Edinburgh; in which are professors of most of the liberal arts and sciences, and those maintained with competent salaries.

Scotland has produced men of eminence in every branch of literature, and christianity seems to have been planted very early in this country; for Tertullian says, "That those parts of Britain into which the Romans had not penetrated, became subject to Christ."

The most ancient division of Scotland, with regard to its inhabitants, is into Scots and Picts; the former having possessed the Western isles, and the skirts of the country westward and northward; whilst the latter had all that part of the country which lay on the German ocean, till the Scots reduced them and their sovereignty at Abernethy, about the year 839. Another division is into Highlanders and Lowlanders; the former being very much of a martial turn, and speaking the original language called Erse, which is a dialect of Irish; whilst the latter are principally turned for the more placid arts of peace and agriculture, using a dialect of the English language, and their customs, which in a few generations the whole country is likely to adopt, as having now one and the same head; though these are not without numerous instances of warlike prowess.

When the Scots got possession of the country from the Picts, it seems to have been an heptarchy which was shared among seven princes: the first part contained Angus and Mearns; the second, Athold and Goverin; the third, Stradeern with Meneted; the fourth was Forthever; the fifth, Mar with Buchan; the sixth, Muref and Rofs; and the seventh, Caithness, which is divided in the middle by the Mound, a mountain which runs from the Western to the Eastern sea.

It is also naturally separated by the Grampian or Grantz-bain mountains, called in Latin *Mons Grampius*, which run the breadth of the country from south-west to north-east.

The capital rivers, particularly the Forth Clyde, Tay, and Nefs, &c. divide it into peninsulas; these running so far into the country as to be intercepted only by a small isthmus, or neck of land, but more especially the small distance of Loughness from the western sea.

The Romans parcelled it into the following people: 1. The Gadeni, containing Teviotdale, Merch, and Lauder; 2. Selgovæ, including Annandale and Niddale; 3. the Novantes, in which are comprised Gallaway, Carrick, Kyle, Cunningham, and Glotta; 4. The Damii, containing Clydesdale, Lennox, and Stirling; 5. Caledonia, containing Fife, Strathern, Argyle, Cantire, Lorn, Braidalbin, Perthshire, Angus, Mearns, Mar, Buchan, Murray, Lochabar, Rofs, Sutherland, Caithness, Strathnavern; and lastly, the Roman wall. But although the Romans called the country by those names, it was little known to them beyond the Forth.

Scotland may be divided into two classes; namely, South of the firth of Forth, whose capital, and that of the whole kingdom, is Edinburgh; and north of the same firth, the principal town in which is Aberdeen.

The shires of Scotland which, since the union, send one member each to parliament, are, 1. Aberdeen, 2. Air, 3. Argyle, 4. Bamff, 5. Berwick, 6. Bute and Caithness by turns, 7. Clackmannan and Kinross by turns, 8. Dumbarton, 9. Dumfries, 10. Edinburgh, 11. Elgin, 12. Fife, 13. Forfar, 14. Haddington, 15. Inverness, 16. Kincardine, 17. Kirkcubright, 18. Lanerk, 19. Linlithgow, 20. Nairn and Cromartie alternately, 21. Orkney and Zetland, 22. Peebles, 23. Perth, 24. Renfrew, 25. Rofs, 26. Roxburgh, 27. Selkirk, 28. Stirling, 29. Sutherland, and 30. Wigton.

The district of royal burghs which send alternately one member to parliament, are the following: 1. Air, Irwin, Rothsay, Inverary, and Campbell-town. 2. Bamff, Elgin, Cullen, Kintore, and Inverury. 3. The city of Edinburgh. 4. Forreth, Nairn, Inverness, and Fortrose. 5. Pittenweem, Anstruther Easter, Anstruther Wester, Craile, and Kilrennie. 6. Inverkeithing, Stirling, Dumfermling, Culross, and Queensferry. 7. Burntisland, Dysert, Kirkaldy, and Kinghorn. 8. Dundee, Perth, St. Andrew's, Cowpar, and Forfar. 9. Montrose, Aberdeen, Brechin, Aberbrothock, and Inverbervey. 10. Kirkcubright, Dumfries, Lochmaban, Annan, and Sanquhar. 11. Lanerk, Linlithgow,

Selkirk, and Peebles. 12. Renfrew, Glasgow, Ruglen, and Dumbarton. 13. Dingwall, Tayne, Dornock, Wick, and Kirkwall. 14. Jedburgh, Haddington, Dunbar, North Berwick, and Lauder. 15. Wigton; Whithorn, New Galloway, and Stranrawer.

All these shires and districts constitute the forty-five members of the British parliament which Scotland sends as its representatives, besides sixteen peers, chosen out of the body of the nobility, by virtue of the treaty of union between the two kingdoms.

Many salutary laws have been enacted since the union, particularly after the insurrections of 1715 and 1745, with a view for improving the Highlands, breaking the attachment of clans to their chieftains, and reconciling its inhabitants to the British government; for which purpose the forfeited estates have been appropriated: and in the late war with France great numbers of them were employed in his majesty's service, both in Germany, and more especially in North America, where nothing can surpass the valour and honour with which they have exerted themselves on repeated occasions, against the French and their Indian allies, to the very great diminution, and otherwise maiming and disabling of their corps. Numbers of charity-schools have also been erected to very considerable advantage, both in the Highlands and the isles, by the Society for promoting Christian knowledge. The civil government of the shires has been something altered since 1745, by the crown nominating sheriffs as his majesty's immediate deputies, who are taken now from among those gentlemen who are bred advocates at Edinburgh.

Some slight amendment as to servants, we are told, have lately been introduced in some parts; but were the gentlemen's views carried further, the emolument thence arising to their country would be much more considerable; namely, by encouraging their tenants and other inferior possessors of their lands with leases, and abating of the rigour of enormous services, in plowing, sowing, and reaping of the Laird's corn, with the bondage of grassums, or a sort of iniquitous fines, and the leading home their firing, besides numberless other dues and casualties, with the load of which the poor people are quite oppressed. All this would not only be a sensible relief to the occupiers, but in the end prove the real advantage of the proprietors, who thereby would have their rents the better secured, and more punctually paid. Besides, the generality of parish-schools are upon a very bad footing, and schoolmasters paid their salaries but very indifferently, by means of a few paltry measures of corn, assessed principally on the inferior tenants, and very miserably levied, to the great discouragement of literature: whereas, were a proper representation made of the above, and the bishops rents, &c. in Scotland, which at present are mostly impropriated into lay hands, and that not perhaps entirely free from the charge of sacrilege: were these, I say, applied for erecting of commodious schools, and increasing the salaries of their schoolmasters to be persons of ability and good morals, it is most evident what an advantage would thence accrue to the community in general, and to his majesty's service in particular: so that learning, which in several remote parts of the kingdom is almost at the last gasp, might be revived, affection to his majesty's most auspicious government established every where, piety and virtue promoted, and consequently a number of proper hands either continually employed in the manufactures, fisheries, and agriculture of the kingdom; or taken, as national exigencies required, into the service of their king and country against the common enemy of Great-Britain, for the mutual interest of both the united crowns; and this we see has been very wisely done of late. But to proceed: The parliament of Scotland before the union, like that of England before the reign of Edward I. sat all in one house, and the chancellor was president or speaker. It consisted of three-estates, viz. first, the bishops and mitred abbots; secondly, the greater or lesser barons. But no debate was suffered in the house before the revolution. The business was carried on in the following manner: a committee was chosen consisting of thirty-two persons, who received all the bills presented, and

if they were approved of, they were twice read in the house, and then put to vote. The above committee were called Lords of the Articles, and the manner of chusing them greatly enlarged the powers of the crown. The king appointed eight, who were generally dependant on himself; these chuse eight more, and the sixteen thus elected, made choice of the remainder. Thus in almost every instance, the court had a majority.

The parliament of Scotland being now immersed in that of Great Britain, the courts of civil judicature now in Scotland are, 1. The college of justice, or a venerable bench of fifteen senators, or lords of session in ordinary, who administer justice at Edinburgh in the parliament-house there, both according to law and equity, but no juries are admitted in this court. 2. The justice or justiciary court, which is the law-court principally for criminal causes. It consists of a justice-general, justice-clerk, and five other judges, who are lords of the session. By these being joined with a pannel of fifteen out of forty-five cited like juries in England, all causes are tried, and by act of parliament 1748, are to hold assizes all over the kingdom twice every year, being thence called lords of the circuit. 3. The court of exchequer, which is made like that in England. 4. The court of chancery. 5. The sheriff's court in every county, who decides controversies among the inhabitants relating to matters of inferior concernment. 6. Justices of the peace, with the same powers as in England. 7. The commissaries (the principal of which is at Edinburgh) all over the kingdom; in this court are pleaded actions relating to wills, tythes, and other ecclesiastical matters. 8. The court of admiralty. And 9. A delegated number of privy-counsellors for Scotland from that of Great Britain.

The several orders and degrees in Scotland are, 1. The king, now sovereign of Great Britain. 2. The prince of Scotland, or the king's eldest son, now the prince of Wales, or the prince royal of Great Britain. 3. Dukes, said to be first brought into this kingdom about the year 1398; marquises, earls, viscounts, and barons or simple lords, the same as in England. 4. Knights, also the same as in the other kingdom. 5. Lairds or barons, being such as anciently held lands of the king *in capite*, some of whom are possessed of several baronies, and may make other barons for the sake of a vote at elections, and who now alone chuse the representatives of shires to sit in parliament. 6. Gentlemen, as advocates, graduates, &c. and, citizens, merchants, and burghers, &c. with the commonalty.

The established religion of Scotland is the calvinistical or presbyterian, as contained in the confession of faith authorized in the first parliament of king James VI. or which is much the same, the confession of divines at Westminster, which the church (commonly called the kirk) of Scotland have adopted.

In the time of episcopacy in Scotland, once something different from that in England, there was the archbishopric of St. Andrew's, whose suffragans were Edinburgh, Dunkeld, Aberdeen, Murray, Dumblane, Brechin, Ross, Caithness, and Orkney. The archbishopric of Glasgow, under which were Galloway, Lismore or Argyle, and the western isles.

Besides these they had sixty-eight presbyteries, as Dunfermline, Chirnside, Kelfo, Earlieston, Selkirk, Jedburgh, Dunbar, Haddington, Dalkeith, Edinburgh, Peebles, Linlithgow, Perth, Dunkeld, Auchterarder, Stirling, Dumblane, Dumfries, Perpont, Lochmaban, Middleby, Wigtown, Kircudbright, Stranraer, Air, Irwin, Paisley, Dunbarton, Glasgow, Hamilton, Lanerk, Biggar, Denune, Innerary, Cambleton, Kilmore, Skey, St. Andrew's, Kirkaldy, Cowper, Dumfermline, Meegle, Dundee, Arbroth or Aberbrothock, Forfar, Brechin, Mearns, Aberdeen, Kincardin or Kincarden-O'Neil, Alford, Garioch, Deer, Turrey, Fordyce, Ellon, Strathbogy, Abernethy, Elgin, Forreth, Inverness, Aberlour, Chanrie, Dingwall, Tayne, Dornoch, Caithness, Orkney, and Zetland.

Under this was a session in every parish, consisting of the minister as moderator or president, and the worthiest persons in it, called elders. 2. A presbytery, com-

posed of a number of ministers, between twelve and twenty, more or less, with ruling elders or laicks from each parish. Here in times of episcopacy the bishop presided; now one of the ministers is chosen moderator. They judge cases too intricate for the session; examine such as would enter into orders; settle ministers in parishes, also schoolmasters, &c. 3. The provincial synod, who meet twice every year, which is made up of more or less presbyteries, and their respective members. 4. The general assembly or convocation, which is the supreme judicature and ultimate resort; appeals lying from the session, presbytery, and synods to it.

And now that presbytery or calvinism has been established in Scotland since the revolution, the same courts and governments are retained, with some little difference in the manner of procedure: at present therefore, instead of bishops, there are thirteen provincial synods.

The method of proceeding against delinquents in the ecclesiastical courts is carried on in the following manner. The person accused is summoned before the kirk session, which is a meeting of the ministers and elders every Sunday; if he will not abide by their judgment he may appeal to the presbytery which meets every six weeks, and from thence to the synod, which meets twice in a year; and if he still remains obstinate, he may appeal to the general assembly, which meets once every year at Edinburgh; but from their determination lies no appeal: it is finally binding, and he must either submit or be excommunicated.

In this kingdom are several dissenters or episcopalians, who originally in their extemporary prayers used the Lord's prayer and the Gloria; but they mostly have adopted now the church of England form: however, the non-jurors among them are not permitted to have meeting-houses, and suffered only to preach and read the divine service to a very small number, since the year 1745; whereas such ministers as take the oaths, and pray for his majesty in express terms, have meeting-houses. Of the presbyterians there are several dissenting sects, as Eiskinites, Gibonites, from the ministers of that name, who have seceded from the church of Scotland, and upon that account called Seceders: also mountaineers, &c. as preaching in the open fields and on the mountains: these are also called Camerians.

The salt of Scotland, which is principally manufactured in what they call pans or caldrons, is said to be stronger and better than that of Shields and Newcastle, cures fish to greater advantage, and is so much the more valued abroad, that large quantities of it are exported every year to Germany, Norway, the Baltic, &c.

It has been observed that the wine-trade sometimes runs against the Scotch, in point of advantage, especially if the article of French brandy and French wine be admitted; the smuggling of which is at present said to be in a great measure at an end every where, especially in the north. But that alone excepted, it is well assured, that allowing the lead, corn, tobacco, and sometimes salt, which Scotland exports for wines, which they receive in return from whatever country, the balance is not against them; for were these wines brought even from Spain, the balance would be still more in their favour, on account of their fish and linen, both which are good merchandize on the Spanish side of the bay of Biscay.

The goods Scotland receives from England bears no proportion to those it sends thither; for the principal article which it takes is its woollen cloths of the finer sort only, and some silks; in lieu of which England takes off their wool, cattle, linen, muslin, corn, and nearly all their produce except fish and salt.

At Inverness in particular, we are told that the Sconce or Oliver's fort, is laid out of late into convenient places for the working of silks.

Among the forts and garrisons of this kingdom, as Edinburgh, Stirling, and Dumbarton castles, with Fort William, &c. we beg leave to insert an account here, though something out of place, as having been mislaid or forgot, concerning the fort on Ardelear Point, a regular fortification lately built in Scotland, since the trouble

troubles of 1745, and one of the largest in Britain. It stands on a narrow neck of land or peninsula made by the sea, and called Ardesear, about eight miles east of Inverness, and opposite to Chanery on the Murray firth where narrowest, being not much above a musket-shot over to the Ross side, has a ditch cut across the neck of land, into which the tide flows, with stout draw-bridges. It is said to be larger than Gibraltar, and built after the same plan; and will contain upwards of ten thousand men when completed. To the land-side, towards the kirk of Ardesear, this citadel has guns quite level with the ground, and above these large battering pieces; on the Chanery side is a sloping impregnable sand-bank, about thirty feet in the base, as a defence on that side, with walls, ramparts, ravelins, and guns, all properly ranged around it. Here is a draw-well of the finest water, which was the first work done here, and found by digging to a proper depth, the soil being very sandy and barren; from whence it appears, that the like advantage might be procured by human labour, even in the dry deserts of Arabia or Africa. And from Ardesear has been made by the military a new road over the Cairn of Month, Kincardine O'Neal, or the low road for Edinburgh, even to the town of Perth, communicating with general Wade's well known road; so that the king's forces may now soon and easily traverse all the mountainous, and otherwise inaccessible parts of Scotland. Since the demolition of Fort George at Inverness in 1745, this place has been built as a bridge on the Highlands; but Oliver built a sconce or regular citadel near the mouth of them, which lies a little below Inverness, and continued till the Restoration, when it was ordered to be demolished; apparently for no other view, but its being a monument of the Protector.

The first and most antient university in Scotland is that dedicated to the apostle St. Andrew, the tutelar saint of that nation. The story of which, as related by the monkish writers, is, that in the year 805, Achaius, king of Scotland, and Hungus king of the Picts, were engaged in a war with Athelstan king of the West Saxons, and both armies being met in the evening near Haddington, in East Lothian, deferred to engage till next morning. About midnight king Achaius being in his tent at his devotions, St. Andrew appeared to him in a most glorious manner, with the ensigns of his martyrdom, and assured him of victory. Accordingly next morning both armies met, the Saxons were defeated with great slaughter, and their king killed in the field. In memory of which Achaius put his kingdom under the protection of St. Andrew.

The city of St. Andrew is the capital of Fifeshire in Scotland, in Latin *Adreanopolis*, or *fanum Sancti Andreae*, has its name from St. Andrew, the tutelar saint of Scotland, whose bones are said to have been brought hither from Patras, a town of Peloponnesus, by one Regulus a Greek monk, in the year 408, a man in that age much esteemed for his piety, as appears by the church dedicated to him, and called by his name. From him also, as old writers report, this town was at first called Regimunt, or Killrimunt, that is, Mons sancti Reguli; for we read that Oengus, Hengust, Ungus, or (Angus) a king of the Picts, granted to God and St. Andrew, that he should be head of all the churches within the Pictish dominions: and he built the above-mentioned church in the fifth century, which he also called Kyle-ri-mont. But the name of St. Andrew's has prevailed for many ages.

It is also manifest from old manuscripts, that this was one of the principal seats of the Culdees, i. e. according to some, *Cultores Dei*, worshippers of God. But this seeming a strained derivation, and the grand receptacle, or seminary of those religious votaries, being at I-columb-ryle, in the little island of St. Columbus, west of Mull in Scotland; the name is rather thought to be of Erse or Irish, originally denoting their living in cells about a church, burying-ground, or such like consecrated place, and devoted to the service of God. They had the care and direction of holy things, from the first reception of Christianity in those parts.

Alexander I. king of Scotland, founded, say some, a priory here, for regular canons who were monks of the order of St. Augustine; the government of the Picts having been abolished in Britain: And Kenneth III. transferred the Episcopal see from Abernethy to St. Andrew's, about the year 840.

So that St. Andrew's is an ancient, and once was a flourishing city, the metropolis of all Scotland, the seat of the first university, and before the revolution, the see of an archbishop, who was primate of all Scotland. There still remain the marks of venerable antiquity, the ruins of the cathedral church and monastery, which abundantly shew their ancient glory and magnificence.

It is remarkable for a fine situation, standing in a plain with a most pleasing prospect to the German ocean, and north of a promontory of Fifeshire, which the seamen call Fifeness. It is surrounded with extensive corn-fields, abounding in excellent wheat and barley, with other grain; and delightful downs, called the Links, lie on the sea side towards the north. The famous physician Cardan esteemed it the most healthy town he ever lived in, having occasion to experience it for some months, when he came over from Italy, at the request of the Pope, to prescribe to Archbishop John Hamilton, at which time he recovered of a consumption. And twenty years before this, it had the approbation of the most eminent physicians of the country; when a house was fitted up here for the reception of Magdalen, daughter of Francis I. king of France, who married James V. king of Scotland, in 1537; but that lady died shortly after her arrival at Holyrood-house, in Edinburgh, and never reached St. Andrew's.

Of old, the town consisted of four large streets, lying from east to west almost parallel to one another. The most northerly of the four, called Swallow-street, though formerly the principal, is now entirely ruined, not so much as a house remaining in it. The other three from their regularity, do not seem to have been a fortuitous concurrence, as it were of houses, as most of the other towns in the country are; all of them terminating eastward at the cathedral, which look upon each other, and seem to bewail their decaying and mouldering state: for though the town was formerly about two miles in circuit, now hardly remains one thousand houses; and of those near two hundred are become ruinous and not habitable. The number of souls here still amounts to above four thousand. But many of the inhabitants have little or nothing to do, the place having neither trade nor manufactures. Though at the same time it has a harbour; but this is capable of receiving only small vessels. Near the town are quarries, in which is plenty of free-stone, and of this all the houses are built.

Before the reformation this city was crowded, both on account of trade and religion, pilgrims resorting hither in great numbers to visit the relics of St. Andrew. Here were two other religious houses, namely, a Franciscan and Dominican priory, besides that of the order of St. Augustine; which last, some make to have been founded (otherwise than is above-mentioned) by Robert, Bishop of St. Andrew's, who died in 1139, and established upon some of them revenues formerly belonging to the antient Cu'dees of this place. James Stuart, afterwards earl of Murray and regent of Scotland, with whom Buchanan was a particular favourite, and who in return, commends him very highly in his history, was in his younger days prior of it. This monastery was more like the magnificent palace of a prince, than a convent of monks, professing poverty, as still appears from its grand ruins, and particularly by the wall of hewn-stone that encompassed it with several battlements and turrets.

Here is now only one parish-church remaining, namely, that of the Holy Trinity. There are two others, but these are rather chapels; the one to St. Salvator's college; of which, however, no use is made, it having no endowment, and the Provost of that college being often a layman, even in a Presbyterian sense.

The

The other is the chapel belonging to St. Leonard's college, the Provost of which must be a minister.

The church of the Holy Trinity is an ancient and stately edifice, built with fine free-stone, in the form of a cross; and at its west end is a handsome spire, which is in good repair. In it is a fine monument for Archbishop Sharpe, who was assassinated upon a moor by the devils or blind zealots, called Wigs, in the reign of Charles II. as he was coming home in his coach. This Dr. Sharp was originally a Presbyterian minister, who being deputed by the assembly of the kirk, to come up to the court of that prince, for the redress of some grievances his brethren loudly complained of; he was prevailed on to embrace the doctrine of the church in London, and accepting of the see of St. Andrew's, came back to his own country, vested with the dignity of their metropolitan: and hence their resentment and premeditated malice, thus barbarously vented themselves. He was a man of great piety, and no less eminent for his learning. This monument was erected by the archbishop's brother, Sir William Sharpe, Bart. who, order in to secure it from the fate he feared it might be liable to, settled six thousand Scottish marks, which is above three hundred pounds sterling, to the city of St. Andrew's, for keeping it in constant repair: which has had the desired effect; for the magistrates are very careful of it, and would be very severe upon any who should attempt to deface it.

On the north side of the town stood the old castle, of which now nothing remains but the walls. It was built by Roger de Bellomont, bishop of St. Andrew's, who died in the year 1202, being second son of Robert de Bellomont, earl of Leicester, and chancellor of Scotland. It was repaired by Cardinal Beaton or Bethune, who was the Pope's nuncio, and Metropolitan of this see; and also by archbishop Hamilton: the former of which procured Mr. George Wishart, a zealous reformer, to be burnt here in the parade, while from his window he gluted his eyes with so horrid a spectacle: but he himself was afterwards assassinated in 1546 in the very same place. In revenge of whose death, the French, with the consent of the queen-regent of Scotland, attacked it, from whom it suffered greatly. But at the Reformation it suffered more from the fury of the populace; and since the Revolution its ruin has been completed.

East of the castle are the ruins of the stately cathedral of St. Andrew's, founded by bishop Arnold, who died in 1163, and finished by bishop Lamberton, who died in 1328. It was in length from east to west three hundred and seventy feet, and the cross from south to north one hundred and eighty; its breadth sixty-five, and its height one hundred feet. Though some draw another kind of ichnography, making it seven feet longer and two broader than St. Peter's church at Rome. So that with regard to its height, as well as the beauty of its pillars, and the symmetry of the whole fabric, it was one of the best Gothic structures in the world. It was near demolished at the Reformation; but in some measure repaired by the succeeding archbishops. But since the Revolution it has been wholly in ruins, as we see it at this day.

Near the rudera of the cathedral, are still remaining the walls of the very ancient chapel of St. Rule (the Regulus above-mentioned), with the great square spire still entire. It is one hundred and five feet high, and made of such large and durable stones, that though built so many ages ago, yet so little has it suffered by the injuries of the weather, that a small expence would save it from falling for many ages yet to come. And as this is probably one of the most ancient monuments of antiquity in Great Britain, it is a pity it should go to ruin for want of a suitable reparation. Beside, this would be the most proper chapel and chapter-house for the Knights of the most ancient order of the Thistle, since under the patronage of the apostle St. Andrew (whose relics were preserved at this place), that honourable order had its rise and foundation: and by king James VII's (i. e. James II. of England) letters-patent for reviving and restoring this order of knighthood,

which were dated at Windsor the twenty-sixth of May, 1687, it appears that the Knights of the Thistle of St. Andrew, formerly held their chapters in the great church of St. Andrew: upon the demolition of which his said Majesty ordered them for the future to be kept at the Chapel-royal of Holyrood-house.

The principal ornament of this city is the University, which at present consists of three colleges. It was founded by archbishop Henry Wardlaw, in the year 1412; and he obtained very ample privileges and immunities from Pope Benedict XIII. which were afterwards confirmed to them by king James I. of Scotland, and several succeeding princes of that kingdom. In the time of Episcopacy, the archbishops of St. Andrew's were chancellors of the University. The rector is annually chosen, and by the statutes he ought to be one of the principals of the three colleges here, which are called St. Salvator's, St. Leonards, and New College.

The college of St. Salvator, commonly called the Old College, was founded by James Kennedy, archbishop of St. Andrew's, in the year 1448, who was grandson to king Robert III. He erected the edifice, furnished it with costly ornaments, and endowed it with sufficient revenues for a doctor, bachelor, and licentiate of divinity, four professors of philosophy, and eight burars or poor scholars. The earl of Caithness settled a maintenance for a professor of philology or humanity. The aforesaid bishop also founded a church or large vaulted chapel to it, which is covered with free-stone, and beautified with a lofty towering steeple all of hewn stone, and in it his monument of curious workmanship is still to be seen. It has a good library, founded by Dr. Skeen, professor of divinity, and principal of it, which by the donations of learned men, is now very well furnished with good books. He also repaired and augmented the college-fabric, having made a collection for that purpose. The common-hall and schools are vastly large, and the cloisters and private lodgings for the masters and scholars have been very magnificent and convenient; but the fabric of late years has become very much out of repair; nor are the college-revenues able to support it. In this college are three silver maces, as old as its foundation: one of them of the finest workmanship, gilt, and weighs seventeen pounds. These, with six other maces sent to the other colleges in Scotland, were found in archbishop Kennedy's tomb in the reign of king Charles II. and supposed to have been buried there at the time of the Reformation, in order to save them from the violence and fury of the times, particularly in Scotland, when every thing adorned with images was defaced, if not destroyed.

St. Leonard's college was founded also before the Reformation, by James Hepburn, prior of St. Andrew's, in the reign of king James V. and afterwards patronized by the earl of Lenox, with salaries for a principal or warden, who is always a doctor of divinity, four professors of philosophy, and maintenance for eight burars, exhibitioners, or poor scholars. To these Sir John Scot of Scot-Starvet added a professor of philology, with a genteel salary, and augmented the library very considerably. Of late it has also been very much increased by Sir John Wedderburn, doctor of physic, who, at his death, left his large collection of books to it. Here also is the famous manuscript of the history of Scotland, called Chronicon Scoticum, written by John of Fordun, who was a Monk there. The rector or minister of St. Leonard's church is commonly the principal of this college, who has a better revenue, and more students, than any of the other two colleges.

In order to keep up the ancient skill of archery, and a taste for manly exercise and innocent amusement, a prize of a silver arrow is annually given for the students of this college to shoot with bows and arrows; and the winner appends his coat of arms to it on a silver plate.

By an act made in the year twenty, George II. the colleges of St. Salvator and St. Leonard have been united, in pursuance of an agreement which they themselves made for that purpose.

The New College, or St. Mary's, was founded by James Bethune, archbishop, with endowments in it for two professors, always doctors in divinity; the one styled principal professor of theology, and the other simply professor of theology; and some students in the same faculty; for no philosophy is taught here, nor any scholars entertained in it; only such students of the other colleges as have passed through a course of philosophy, may enter themselves, and finish their studies in it.

A professor of mathematics was of late years added to this university; as was also, not long since, a professor of medicine, with a handsome endowment, namely, the interest of one thousand pounds, given by his grace James the late duke of Chandois, whom the university, upon the death of the duke of Athol, in gratitude, chose to be their chancellor; which office is during life; and to it alone, and that of the vice-chancellor, belong the conferring of all university-degrees.

Upon the establishment of Presbytery, at the Revolution, king William sent his *Comte d'elire* to chuse the aforesaid duke of Athol their chancellor.

Mr. James Gregory, the first professor of mathematics in this university, famous for his knowledge in that science and astronomy, erected a commodious observatory in the college-gardens, having procured a contribution to be made for that purpose. He also furnished it with several mathematical instruments.

St. Leonard's and New College having a better revenue to support them than that of St. Salvator, are consequently in much better repair.

In New College king Charles I. held a parliament, in a spacious room, with three rows of seats one above another, which will contain four hundred persons; and in the middle of the area there is a table for the clerks and other officers. It still retains the name of the parliament-room, and is sometimes made use of for public exercises. Though here are no scholars, it is the best kept of all the three colleges.

The students of the university wear scarlet or red gowns: and it has produced many learned men; among others, the famous lord Napier, inventor of the logarithms, and the bones which bear his name, Sir Robert Murray, Sir Andrew Balfour, and the great Scottish lawyer, Sir George Mackenzie, &c.

At St. Andrew's is no harbour of any consequence, the main ocean coming up to the city-walls. And they have some ships, at least barks, and other small coasting-vessels, especially for the herring-fishery, which, in its season, is just at their doors. Though this city is so full of ruins, and decayed structures, yet it is still a handsome, well-built, pleasant place. Here also are the rudera of a strong citadel, which was built by Oliver Cromwell, by means of which, during his usurpation, he commanded the city and country from the firth of Forth to that of Tay.

The above-mentioned prior James Hepburn, at his own expence, walled in two-thirds of this city with watch-towers at proper distances; which wall is by some reckoned the best in Britain; and his arms are still in many parts of it.

The small harbour of St. Andrew's has suffered greatly by the encroachments of the sea. The pier is founded upon a rock about four hundred and forty feet in length; but this rock runs out five hundred feet further into the sea, at the point of which stands a beacon: so that the great swell of the sea breaking over the rock between this beacon and the pier-head, renders the harbour very dangerous. In 1728 it was proposed to repair this harbour, and for this end the pier to be carried as far as the beacon: accordingly a brief was granted; but the collections were insufficient to make any great advances, unless the two pennies act of impost on ale would answer such beneficial purposes.

This city still enjoys some privileges from its original charter yet extant; by which King David incorporated it in the year 1153.

From all that has been said it will appear, that this ancient city, and its university too, are in a very declining state. The archbishop's seat, and that of the

ecclesiastical courts kept there, besides the above-mentioned great resort of pilgrims to the convents and the chapel of St. Rule, on account of St. Andrew's relics, brought great business thither; which being now for a long time disused, and a new college erected at Edinburgh, and another at the new-town of Aberdeen, contribute greatly to the decay of both the town and university of St. Andrew's.

Formerly, in civil matters, St. Andrew's was the seat of a stewardry for Fife: but this, and other hereditary jurisdictions in Scotland, have been lodged in the crown, by a late act of the British parliament, for valuable considerations.

Before the revolution, at which memorable æra presbyterianism came to be legally established in Scotland, the archbishop of St. Andrew's had under him the twelve following bishoprics, namely, Edinburgh, Dunkeld, Aberdeen, Murray, Dumblain, Brechin, Ross, Caithness, and the Orkneys. The diocese of St. Andrew's Proper contained Fifeshire, part of Perthshire, and part of Angus and Mearns. St. Andrew's was also one of the seats of the sixty-eight presbyteries under episcopacy, as it is at present under presbyterianism, and constitutes one of the four presbyteries, of which the synod of Fife is at present composed.

St. Andrew's is the third in rank of the district of royal boroughs, the other four being Dundee, Perth, Coupar, and Forfar, which send one member to parliament alternately every seven years.

In the neighbourhood of St. Andrew's are two very agreeable seats belonging to the Leslies Earls of Leven, which are called Melvil and Balgony.

St. Andrew's is situated eight miles south-east of Dundee, and fourteen north-east of Edinburgh, latitude fifty-six degrees twenty minutes north; longitude, two degrees twenty-five minutes west.

The second university in Scotland is Glasgow, in describing of which we shall give an account of the city, its trade and manufactures.

Glasgow is a large well-built city in the county of Lanerk or Clyddale, and situated on the east bank of the Clyde, over which is a stone bridge of eight arches, built at the sole expence of Gavin Dunbar, archbishop of Glasgow, 1440.

Glasgow, in Latin *Glasguinensis*, is a very antient city, and in the Erse language signifies a greyhound. The story of which is as follows:

In the fifth century Kentigern, called by the Scots St. Mungo, resided in a cell where the great church now stands, and converted many of the natives to the christian religion. Amongst the rest of his converts was a lady who had received a ring from her husband who was gone on a journey, with strict charge to keep it safe till his return. The lady walking one day by the side of the river, the ring dropped off, and she was in the greatest perplexity, how to recover it. She employed men to search for it, but all was in vain. At last she told her case to St. Mungo, who bid her not be afraid but trust in God. Accordingly the holy man went with her to the river-side, at the place where the ring was lost. The saint looking up to heaven prayed that God would by a signal act of his power confirm his ministry; which was immediately done; for he called on the fish who had swallowed the ring to come on shore; when behold a miracle! a large salmon jumped out of the water, and laid the ring at the feet of the saint. The lady's husband returned, and hearing of the affair, was converted to christianity. The fish with the ring in his mouth is the arms of Glasgow to this day. The reason why a grey-hound is likewise used in the arms is, that a dog of that species waited at the place till the ring was found.

In the middle of the city stands the tolbooth or town-house, of hewn-stone, with convenient apartments for the magistrates, and a very lofty tower, with bells which chime every hour. From this and the market-place contiguous run the four principal streets in the form of a cross, each adorned with public structures, and open: so that from hence the whole town may be seen as from a centre. The houses are built uniform, of stone, being generally six stories, and some more, mostly supported

ported by large and square Doric pillars, with arches opening into the streets, which are spacious and well-paved. In the higher part of the city, at the end of one of the streets, stands the cathedral of St. Mungo, a vast pile, still in good repair, this having been the see of an archbishop before the revolution, whose patron and bishop, Mungo, about the year 500; lies buried in that part of it called the barony, now serving entirely for the use of the common people. It is divided into two other churches, one over the other, called the upper and lower. Its several rows of pillars, very high towers, with a lofty spire, the highest in Scotland, rising from a square tower in the middle of the cross, are of surprising architecture. There are convenient apartments for the meeting of the presbytery, which consist of nineteen parishes, and also of the provincial synod of Glasgow and Air, which is composed of one hundred twenty-seven parishes or seven presbyteries. The cathedral church-yard is the common burying-ground. From hence to the river is an extent of about a mile, and half of that upon a descent. Here are several hospitals or alms-houses, and many ornamental spires. The ruinous castle near the cathedral was the palace of the archbishop, who was once legal lord of the city, and fenced in with a very high wall of hewn stone, from which is a fine prospect into the city. Here is an university; in which indeed there is only one college, but a stately fabric, consisting of two large squares of very noble stone buildings, and adorned with a high tower, turrets, and separated from the rest of the town by a very high wall. The front towards the city is of beautiful architecture and hewn stone. It was founded in 1453, by James II. of Scotland, and the following year bishop William Turnbull erected the college at his own expence. Its privileges granted by Pope Nicholas V. the same as those of Bologna in Italy, were confirmed by succeeding princes, and benefactions besides made it by the parliaments and nobility of Scotland, particularly the earl of Dundonald, the archbishops, and the city of Glasgow; the ground on which it stands, with some adjacent fields, having been given it by the family of Hamilton, and particularly two very handsome exhibitions for the like number of students of divinity for four years, the latter part of which they are appointed to study at Leyden in Holland. On this foundation was the ingenious Mr. Macknight, minister of Maybole, and author of the *New Harmony of the Gospels*; as also the late Mr. Lewis Chapman, minister of Petty, near Inverness; Mr. M'Laurin, the mathematician, and many others. Its members are a rector, a dean of faculty, a principal, who teaches divinity, three philosophy professors or regents, professors of the civil and canon law, mathematics, &c. Here are well planted walks, and pleasant gardens, particularly a physic-garden. The library is well stocked with books and manuscripts, especially through the care of the learned Dr. Fall, afterwards prebend of York. The students lodge in the college, which at Edinburgh, &c. they do not; and the principal and professors have handsome apartments there, and good salaries. During episcopacy the archbishops were perpetual chancellors, which honour is now enjoyed by the duke of Montrose, and the principal acts as vice-chancellor. The famous Rutherford author of *Lex Rex*, Cameron, &c. were educated here. Professor Simpson, who of late years made so great a noise, and was so subtle a casuist in the Socinian controversy, taught divinity here; till the church-judicatories suspended him for life. Several Roman stones, with inscriptions dug up in 1740 near Kirkentilloch, have been added to the antiquities in this university.

Though the Clyde be navigable up to the town for small vessels, yet Newport-Glasgow, nearer the mouth of the river, used to be the harbour for those of large burthen, where there is a good quay or wharf, and a custom-house. But at present the merchants have entered into an association to make the river navigable as far as the city for ships of large burden. Here also, or at Greenock, ships are repaired, fitted out, and laid up. Lighters carry the goods to Glasgow, where is carried on a considerable foreign trade, the merchants of this

city sending about fifty sail every year to Virginia, New England, and other British colonies in America; for which they are more commodiously situated than London, and the passage much shorter, and in the time of war safer, as they stretch away, when out of the Clyde-firth, directly north-west for the capes of Virginia. They have lately purchased a harbour on the firth of Forth, near Alloa, for reshipping their sugars and tobacco to Holland, Germany, and the Baltic. Their home-manufactures are very fine plaids, both filken and woollen, called Glasgow plaids, and striped muslins for aprons, great quantities of which are sent all over Great Britain and the American colonies, where they fetch a good price, besides various sorts of linen-manufactures. Here are houses for refining of sugars and distilling spirits from melasses. Their herring fishery is very considerable; and they cure that fish so well as to be reckoned of equal goodness with the Dutch herrings.

Upon the malt-act extending to Scotland, a measure which was then generally disliked, but produced no bad effects, only that the people made an insurrection in this city, and destroyed the house and furniture of their representative in parliament, Daniel Campbell, Esq; to the amount of above 6000*l.* sterling damage, who voted for it, which the town was obliged to make good; and the remainder of the two-pennies act for the term of thirteen years to come of it, which they enjoyed, was appropriated by parliament for that purpose, till the said sum was paid. In the ninth year of the present reign this two-pennies act was renewed for twenty-five years longer, and the villages of Gorbels and Newport-Glasgow included.

Glasgow gives title of earl to the Boyle family. Ever since the Reformation this city has been famous for its steady attachment to the protestant religion, as also their firm adherence to revolution-principles and the Hanover succession. In the insurrection of 1715 they sent a body of volunteers to serve the king against the earl of Marr: and in the like disturbance of 1745, the young Chevalier and his highlanders levied contributions here, compounding their demand of fifteen thousand pound for five thousand guineas, which were immediately paid them. The inhabitants are very staunch presbyterians, and remarkable for their strict observance of the christian sabbath, and the performance of religious duties on it, hardly any stirring abroad after divine-service, from prayers, reading, and singing of psalms.

This city formerly sent a member to the Scottish parliament; but since the Union it has been joined with Renfrew, Rutherglen, and Dumbarton, which district of royal boroughs send but one member to the British parliament alternately. In the neighbourhood is a seat of the duke of Montrose, which family has considerable estates and interest hereabouts.

Glasgow lies twenty-five miles north-west of Lanerk, and forty-two west of Edinburgh. Latitude fifty-five degrees fifty-six minutes north longitude, four degrees twelve minutes west.

The next universities in Scotland are those of Aberdeen. Most writers concerning Aberdeen have been led into an error, by calling it one city, and one university, whereas it is actually two: viz. Old Aberdeen and New Aberdeen. Old Aberdeen, in Latin *Aberdonca*, is beautifully situated on the south of the river Don, where it empties itself into the German ocean; was the seat of the bishop, having a large and stately cathedral, commonly called St. Machar's, most part of which is now destroyed. It is moreover adorned on the south-side with King's college (so called from king James IV. who assumed the patronage of it), wherein is a principal and sub-principal, with three regents, or professors of philosophy, of which the sub-principal is one. Here are also professors of divinity, civil law, physic, humanity, and the oriental languages, that is, for each faculty one. In the church before-mentioned, is a most stately monument, erected to the memory of bishop Elphinston, who built most of it, A. D. 1500; and hard by the church is a library, well furnished with good books.

This university is not inferior to any in Scotland; one side is covered with slate, the rest with lead; and owes

much of its present splendor to Mr. Frazer, commonly known by the name of Catalogus. The church, with its turret or steeple, is of hewn stone: the top of it is vaulted with a double cross arch, about which is a king's crown, having five coronets, supported by as many stone-pillars, and a round globe of stone, with two gilded crosses closing the crown. In 1631 it was overturned by a storm, but rebuilt soon after in a more stately manner. King Charles I. gave it an endowment for eight burghers, out of the revenues of the vacant bishoprics; from whence this college, and that in the new town, which made up one university, was called the Caroline university, or the university of king Charles. His son Charles II. also, by advice of parliament, in 1672, gave the benefices of vacant churches in several dioceses to this college for seven years. The bull for erecting this university was granted by Pope Alexander IV. to king James IV. and William Elphinston, the above-mentioned bishop of Aberdeen, procured it as ample privileges as any in Christendom, particularly like those of Paris and Bononia. The bishop built most of the college, and furnished the great steeple with ten bells, &c. Over the Don, is a lofty stone-bridge of one arch. About a mile from hence, is New Aberdeen, situate at the mouth of the Dee, as the other is at the mouth of the Don, and therefore by some called Aberdeen, and by others Bon Accord, from its motto. New Aberdeen is the capital of the sheriffdom of that name; the seat of the sheriff for the trial of causes, and of the country courts, which are kept in the tolbooth near the great steeple at the cross; it has a prison and work-house. That it had a mint also formerly, appears by several coins preserved in the cabinet of the curious, with this inscription, *Urbs Aberdonae*. The streets are paved with flint, or a hard stone much like it. At the west end of it is a little round hill, from the bottom of which there issues a spring, called the Aberdonian spaw, because it comes very near the quality of the spaw water in the bishopric of Liege. The curious are referred, for a particular account of it, to a treatise written by Dr. William Barclay: This spaw, and good part of the green near it, is walled round, and has commodious apartments, with a cascade for the convenience of bathing both sexes apart. Over the Dee, about a mile from the city, is a famous bridge of seven arches, built of free-stone, by bishop Gavin Dunbar. Besides other public buildings, here is a church handsomely built of free-stone, in the high-street; and near the port or wharf is a custom-house. The market-place is very beautiful and spacious, and the adjoining streets very handsome; most of the houses being built of stone, and the inhabitants as gay, genteel, and perhaps as rich, as in any city of Scotland. The private buildings are commonly four stories high, or more, with handsome sashed windows, and gardens and orchards behind them; so that the city, at a distance, looks like a wood. The town is built upon three hills, but the greatest part of it on the highest, to which is an easy ascent from the plain. Aberdeen is one of the most considerable places in the north of Scotland, either for extent, trade, or beauty of the buildings, both in public and private. Of the first sort, the chief is the University or Marischal college, originally a Franciscan monastery, built by George Keith, earl Marshal, in the year 1593, and from him called the Marshal college; but since his time, the city of Aberdeen hath adorned and beautified it with several additional buildings. And should the present exiled family be restored, this seat of the muses might again rear its head, and flourish under his auspices. Here is a principal, three professors of philosophy, one of humanity, one of divinity, one of mathematics, and one of physic. Add to this, the school founded by Dr. Dunn, which has a head master, and three ushers, handsomely endowed; another school for teaching music; St. Nicholas church (formerly divided into three churches), built of free-stone, with a lofty steeple, covered with lead; an alms-house, and three hospitals. Nor must we forget the library, founded at the charge of the city, supplied with excellent books from the benefactions of several learned persons, particularly the late bishop

Burnet, and furnished with mathematical instruments: In this college, Mess. Thomas Blackwell, father and son, were successively principals, and both writers of some eminence, especially the latter, having wrote *The Life of Homer, The Court of Augustus, Mythology, &c.* was an excellent humanist, and had a beautiful seat built on an island near the influx of the river Dee. Here the famous Mr. Colin Maclaurin was professor of mathematics, till he was called to the university of Edinburgh, where he died. That learned professor of mathematics, Mr. Stewart, is also well known for his commentary on Sir Isaac Newton's treatises of curves. Both rivers, Don and Dee, are famous for salmon, of which vast quantities are taken. Here they make excellent linen, and worsted stockings; of which last manufacture some are so fine, as to be sold from twenty to thirty shillings a pair. These are sent in great quantities into England, Holland, France, &c.

New Aberdeen is a royal burgh, and one of the districts with Montrose, Brechin, Arbroth, and Inverbervy, which send a member to parliament alternately. This city gives title of earl to an ancient branch of the family of Gordon. In this town, as well as at Peterhead, are churches, or, as they are called in Scotland, meeting-houses, where the liturgy of the Church of England is read. They have also several fine chapels with organs. The old town must be very ancient, since the new is supposed upwards of one thousand two hundred years old. Both form two cities independent of each other; but New Aberdeen for trade, wealth, extent, grandeur and learning, is reckoned the third city of Scotland, being only inferior to Edinburgh and Glasgow. In the bay is very good anchoring from seven to nine fathom water; but it is a tide-haven, with a very difficult entrance; though the river Dee is large, the channel being narrow, and the bar often shifting; so that no ship of any consequence ventures in without a pilot. As this city suffered greatly by the disturbance in Scotland at the Revolution, the debts which is thereby incurred were so heavy, that, in order to pay them off, a duty of two pennies Scots, or the sixth of a penny sterling, was laid by the Scottish parliament in 1695 on every Scots pint of ale and beer sold within the town, and its precincts: and the same act has been continued by the British parliament, not only for paying off the said debt, but for building a new pier on the north side of the harbour, for repairing the old pier on the south side, and rebuilding the town-house, &c. A fire happening here in 1721, by which the registers of all wills, judicial deeds, and other authentic evidences, were consumed, two acts of parliament passed in the late reign for supplying them. As the country has a provincial synod, comprehending eight presbyteries, Aberdeen is the name of one, and contains twenty-one parishes. It lies eighty-four miles north-east of Edinburgh, and about seventy south-east of Inverness. Latitude fifty-seven degrees, fourteen minutes north longitude, one degree forty-nine minutes west.

The shire of Aberdeen is a country in the middle division of Scotland. It comprehends the several districts of Birse, Glentanner, Glenmuichk, Straithdee, Strathdone, the braes or hills of Mar and Cromar, the greatest part of Buchan, Formartin, Garrioch, and Strathboggy. It is bounded by part of Angus and Mearns, or rather by the Dee, and the Gransbain or Grampion hills, on the south, by part of Bamff-shire on the north-west, by part of Murray on the north, by the German ocean on the east, and by the river Spey, and part of Badenoch, on the west. Templeman makes its dimensions thirty-seven miles in length, and twenty-eight in breadth; and the area eleven hundred and seventy square miles. As the south part contains Mar with its subdivisions, it was hence formerly called the shire of Mar, which gave title of earl to the antient and noble family of Erskine, till forfeited by the rebellion of the late earl in 1715. The soil would be fruitful enough, were it properly cultivated; it producing corn, particularly barley, rye, and oats, in abundance, together with some wheat; also pule, roots and herbs of different kinds. The hilly parts, especially Peunian craigs, where many eagles build

their nests, are covered with woods of fir and oak; and they have plenty of wild-game, and pasture, &c. They abound in sheep, black cattle, horses, and deer. Here are quantities of spotted or variegated marble, limestone, and slate; and a sort of stones peculiar to this country, called Elf-arrow-heads, which seem to be of the flint kind, and are of different shapes, mostly pointed like spears. They are from half an inch to two inches long, rough, unpolished, and very thin at the edges. In its rivers are found mussels, containing large pearls of a beautiful colour; and both the rivers and the sea abound with fish. The air of the country is cool but healthful; and their common and native firing is peats, turfs, and wood. They have also coals from Newcastle, and other places. The winter is much gentler here, than might be expected so far north. Here are springs of allum water, and veins of stone, from which allum is boiled.

About three miles south of New Aberdeen and one mile from the river Dee, the famous Grampian hills begins, which divides the whole kingdom of Scotland, and which have been so much celebrated by antient writers. Mr. Maitland, one of the most judicious antiquaries of this age, has brought a very rational proof that the battle fought by Julius Agricola against the Caledonian chief called Galgacus, was about eight miles south of this place; and the reasons assigned by him are, that there is the remains of a Roman camp near Stonehaven, about ten miles south of Aberdeen, and none to be found in any part of Scotland north of that place. He likewise observes, that as Julius Agricola returned into Horestia or Angus to wait for his fleet, and that the Roman arms never penetrated beyond that bounds.

The fifth and last university in Scotland is that of Edinburgh, founded by James VI. of Scotland, and I. of England 1588, and on the same spot where his father was murdered by the earl of Bothwell. This university is called king James's college, and has been long celebrated for the study of physic, having six professors in the different branches of that science. It has likewise professors of all the other liberal arts, and the magistrates of Edinburgh act as its chancellor. In the other universities in Scotland, the students wear scarlet gowns, but here they are not distinguished by any particular habit.

Edinburgh is the metropolis of all Scotland, and capital of the shire of its own name, or Mid-Lothian. It was formerly the royal seat of its kings and parliaments, as it is still of the supreme courts of judicature, particularly the court of session, consisting of sixteen judges, one of which is styled lord president; judiciary court, commissary court, &c. The northern Scots, its ancient inhabitants, called it Duned or Dun-eden, i. e. Eden-hill, or the hill of the Edeni, whom Ptolemy, from mistake as some think, calls Otodeni for Scottodeni. In Latin it is called Castrum Puelarum, Edinum, Edinodunum, or more latterly Edinburgum. It stands high; and among its several streets is a remarkably broad one, about a quarter of a mile long, to the Nether-bow, with handsome stone-houses on each side; but some low stalls upon it, called the Lucken-booths, and the guard-house, very much interrupt, if not disgrace it. At the west end of this street is a very strong castle, or rather citadel, upon a rock, inaccessible on all sides, but at one avenue opening to the said street; and this being stoutly fortified with canon and regular works, the Highlanders in vain attempted it in 1745. Here is a garrison and governor, in which office was the late general Gueff at that time. Also a royal palace of hewn stone, where king James I. of England was born. In this place the regalia, records of state, and national magazine of arms and ammunition, are kept. Two wells in the rock plentifully supply the garrison with water.

This castle commands a very wide prospect every way; and from it Salisbury craigs to the south of the Cannongate, and Calton craigs to the north of it having the appearance of wings, gave occasion to the denomination of Castrum Alatum. A steep rock on the south-east side of the castle is called Arthur's seat. At the east end of the high street is one of the city-gates called the Netherbow, leading directly to the Canongate, and by

turning short to the left goes down to Leith, a mile off, which is the port of this city. The Canongate is contiguous to the said gate, as London and Westminster are by means of Temple-bar. Here stands the royal palace of Holy Rood-house, the residence of the former kings of Scotland, which is now parcelled out to the Scottish nobility, into apartments called lodgings. The breadth of Edinburgh from north to south is above half a mile, and taking in the suburbs of the west-port, Bristow port, Potter-raw, Pleasants, Cannongate, and Calton, it is four miles in circuit, and as populous as any city in Europe for its magnitude. Most of the new houses are six stories high, and in one part of the Parliament-close only, they are thirteen or fourteen. The fronts of the houses are generally built of stone, and being parted into tenements, or lands, as they are called, they have as many landlords as stories, independent of one another, like the inns of court in London. Between the High-street and Cowgate, a narrow street to the south, and running parallel with the former, are several lanes of communication, called wynds; there are some also on the opposite side of the High-street, but generally dark and dirty.

This city is inclosed with a sort of wall on every side except the north, where it is secured by the North-lough. It has seven gates or ports. The markets here are very well supplied with all necessaries, and kept in distinct places for the particular commodities sold in them. The churches, including the great high kirk, or ancient cathedral of St. Giles, and the chapel in the castle, are reckoned not less than twelve, all large and magnificent; and the ministers belonging to them not less than twenty-three, who, with some neighbouring parishes, form the presbytery of Edinburgh, consisting of thirty-one members, who meet in the great church, as do likewise the provincial synod and general assembly, to which last his Majesty sends down one of the Scottish nobility to represent his person, with the title of lord high commissioner.

The Parliament-close on the south side of the cathedral, where the Scottish parliament formerly sat, and now the court of session, is a handsome square, with an equestrian statue of king Charles II. Under the parliament-house is the advocates library, a noble collection of books and manuscripts. On the rising ground south of the Cowgate is the university, with a very good library, where, among many other curiosities, is Buchanan's skull, which is so thin, that the light may be seen through it. South from the Cowgate is the high school for Latin, and in the Fountain-close near the Nether-bow, is a royal college of physicians. Here are some hospitals, the principal of which is Herriot's, a stately fabric on the south side of the city, and near the Grass-market, very plentifully endowed by Mr. George Herriot, king James VI's goldsmith, who left for it upwards of eleven thousand pounds sterling. Besides this is the Trinity hospital, St. Thomas's hospital, two maiden hospitals, and an infirmary, &c.

Of late the inhabitants of Edinburgh have built a very grand exchange opposite the Parliament-close, the merchants meeting before this in the open High-street near St. Giles's, whilst all manner of tunes were played by the hand with keys upon a set of bells in the cathedral steeple, for the space of an hour about noon.

From a hill three miles off, fine spring water is conveyed by leaden pipes into the city, and stately fountains erected for that purpose in the High-street. Edinburgh is governed by a Lord Provost and four baileis, with a common council of twenty-five persons chosen annually. Here are fourteen incorporate trades: the train bands consist of sixteen companies, besides three standing companies of town-guards; one of whose captains, named Porteus, who at an execution ordered his men to fire among the spectators, suffered the dreadful resentment of the populace: for taking him forcibly out of the tolbooth, they hung him up in a few minutes, on a dyer's tree in the Grass-market. This catastrophe happened during the regency of the late Queen Caroline, who had reprieved him from sentence of death, which the judiciary court had passed upon him.

This city has the two pennies Scots act for the carrying on their public works, which they employ to great advantage. They drive a good trade here, and send one member to the British parliament. The site of Edinburgh being rocky, is the occasion of great inconveniences for want of necessary-houses; but these the governors of the place take as much care of as possible to prevent. It lies three hundred and twenty miles north from London. Latitude fifty-five degrees, fifty-eight minutes north, longitude three degrees west.

Edinburgh being not only the capital town of Mid Lothian, but also the centre of the three counties of that name, we shall here describe them in the order they lie.

First, East Lothian, which extends about twenty miles in length, and eight in breadth; and besides Haddington, contains the following towns, viz. Preston Pans, Tranent, Aberlady, North Berwick, Dunbar; and over-against Dunbar, about a mile from the Forth, is a hill in the form of a pyramid, which rises to a surprising height, and at a distance seems to terminate in a spire, in which form it appears at about thirty miles distant. East Lothian is a county where all the necessaries of life are to be had in great plenty. The earl of Winton had a fine seat here, before he joined in the rebellion 1715, of whom it is said he could see three hundred ploughs tilling the ground from his window, and all on his own estate. Near a place called Gladsmuir, in this county, the rebels defeated the king's forces under the command of Sir John Cope, 1745.

But the greatest curiosity is the Bass, an island within the mouth of the Firth of Forth, a mile from the south shore of East Lothian, and opposite to the remains of Tantallon castle, on the north shore. It is inaccessible every way, except by one narrow passage, which only a single person can pass at a time, and that not without the help of a cable or crane. At the top of that passage was a fort; but neglected since the Revolution. It was but slightly fortified; rather to prevent its being made a retreat for pirates, than for any use it could be of to command the sea, the entrance of the Firth being so wide, that ships can go in and out without the least annoyance from the Bass. The whole island is a mile in circuit. In the times of king Charles II. and his brother James II. it was a sort of state-prison for the western people called Cameronians, particularly those Presbyterians who had been in arms at Bothwell-brigg against the government. After the Revolution a desperate crew got possession of it; and having a boat, which they hoisted up on the rock or let down at pleasure, took a great many coasting vessels; and held out the last of any place in Britain for king James. But their boat being either seized or lost, and for want of the usual supplies from France, they were obliged to surrender.

The Solan geese are the principal inhabitants of this island; a fowl which is found no where in Britain except here, in some of the lesser Orkney isles, and that of Ailzy in the mouth of Clyde. They come periodically, as the swallows and woodcocks do. They mostly feed on herrings, and therefore come just before or with them, and go away with them also; though they do not follow the shoals, going all away northward, but whither is not known. The neighbouring inhabitants make a great profit both of the flesh and feathers of their young, which are taken from their nests by a person let down the rock by means of a rope. At the top of the Bass is a fresh-water spring, with a small warren for rabbits; and on it is pasturage for about thirty sheep: but the soil at the bottom of it is almost worn through by the violence of the sea. It was purchased by king Charles II. Besides the Solan geese, here are incredible flocks of other fowl; so that, in May and June, the surface of the island is almost covered with their nests, eggs, and young. The Bass rises very high above the sea, in the form of a cone. It lies forty-five miles east of Edinburgh, latitude fifty-six degrees three minutes north, longitude two degrees twenty minutes west.

Haddington, Hadina, the shire-town of the lastmen-

tioned county, is a royal burgh, which, with Jedburgh, Dunbar, North-Berwick, and Lauder, sends a member alternately to the British parliament. It lies pleasantly on the river Tine, over which is a handsome bridge of three large arches. It is a well-built town, with some very good houses, the streets well paved, has a good market, and the seat of a presbytery, consisting of sixteen parishes. Here are the ruins of an old nunnery, which was founded by prince Henry, son of St. David by his wife Ada, from which the latter town seems to derive its name. It has a good church of hewn stone, to which is contiguous the chapel of the Lauderdale family, with their's and other very noble tombs; but the church-choir is down, roof and all. The post-house here is a very good inn, and used to be reckoned inferior to none on the London road; and this now is commonly the cafe over all the great roads of Scotland. About two miles from this town is New-Milns, a fine seat belonging to Francis Charters, Esq; grandson of the late colonel Charters. In the minority of queen Mary, the English seized and fortified this town, and stood out a long siege under Sir George Wilford, against Monsieur Deslie, who attacked it with ten thousand French and Germans, which occasioned considerable actions in the neighbourhood. But at last Henry earl of Rutland coming with a great army, raised the siege, and, after levelling the works, conducted the English in it home. It gives title of earl to one of the Hamilton family, who have large estates and fine seats in the neighbourhood. No part in Scotland is surrounded with more little towns and houses of the nobility and gentry than this; among which Yester, the usual residence of the marquis of Tweeddale, is one of the most pleasant, and has very fine and large plantations round it. Haddington lies eighteen miles east of Edinburgh.

II. Mid-Lothian, or the shire of Edinburgh, like all other places adjoining to the metropolis, is the best cultivated of any in Scotland; were it not that, instead of hedges, the ground is for the most part inclosed with stone walls, which presents a disagreeable prospect. The town of Dalkeith, in this county, is famous for a fine seat belonging to the duke of Buccleugh, a descendant of the unfortunate duke of Monmouth, beheaded in the reign of James II. It is one of the most elegant seats in Scotland, and adorned with a great number of fine paintings: it is about five miles south of Edinburgh. About three miles north of Dalkeith is the castle of Craigmillar, noted for being the residence of Mary Queen of Scots, when she contrived the murder of her husband lord Darnly, 1566.

About five miles south-west of Edinburgh is Roslin, where is a stately and spacious Gothic chapel, and one of the most curious pieces of workmanship in Europe, there being not two cuts of the same sort in the whole structure. It was founded in the year 1440, by the famous William St. Clair, prince of Orkney and duke of Oldenburg, &c. who had erected many other public works, and was distinguished for the honours conferred on him by the greatest princes in Europe. Each buttress on the outside is adorned with statues as big as the life; others are in the niches, and on each side of the windows, which are spacious. The most curious part is the choir vault, and that called the Prince's pillar. It had anciently a provost and seven canons regular, with considerable revenues from the lairds of Roslin.

The principal sea-port town in this county is Leith. It is governed by its own bailiff, but subject to the jurisdiction of Edinburgh, which is a mile south-west of it, and is the port-town of that capital. It lies on the Firth of Forth, upon a river called the Water of Leith, which falls into the Firth on the west side of the town, forming a good mole or harbour, very much frequented. Here the passage-boats from Kinghorn on the Fife-side usually come from the North every tide, and return again regularly, though above seven miles over, and a very rough dangerous ferry. It continues of that breadth for five or six miles west, but grows narrower beyond Cramond, and Queen's-ferry is not above two miles over. During queen Mary's minority, Leith was fortified and defended by a French garrison, when

when the nobility, &c. of Scotland, who stood up for their liberties and the reformation, called in the assistance of queen Elizabeth to drive out the French. In 1544, John Dudley, viscount Lisle, landed here with two hundred ships, wasted Edinburgh, and at his return burnt this town. It soon recovered, and M. de Desfies, general for Francis II. king of France, who had married the aforesaid queen Mary, fortified it regularly, with a design, it was said, to conquer the whole island: upon which the English, at the desire of the protestant states, sending an army under lord Grey, soon forced the French to return home. Most part of the town was burnt during the siege, and all the works afterwards demolished. The entrance into the harbour is made good by a long jet, mole or pier on the east side, and by strong ranges of piles, break-waters or counter-piers, though not so long on the west side; all which are kept in excellent repair; so that the harbour is free and open, notwithstanding a flat shore and huge swell of the sea. A beacon or mast is set up at low-water mark, for the conveniency of navigation. The river divides the town into two parts, being joined together by a handsome stone-bridge of two arches. On the south side leading from the pier towards the bridge, is a spacious handsome street and quay, firmly wharfed up with stone and fenced with piles, and the shipping lay their broadsides close to its wall or wharf. The buildings opposite to, and parallel with the water, are very lofty and handsome, being generally about six stories high, and large sash windows. Here are likewise commodious cellars and warehouses, for laying up goods; the merchants of Edinburgh having the bulk of all their commodities here, in order to be ready for carriage, either by land or sea: so that Leith is not improperly called the warehouse as well as the port of the city. Here are glass-houses for making all sorts of green-glass, particularly bottles; also a sugar bakehouse and saw-mills for cutting timber, fitting deals, and the like.

That called North Leith lies on the other side of the harbour, where some large ships have been built, there being docks both for building and repairing of them. Here are the ruins of the citadel built by Oliver Cromwell, and demolished by Charles II. Of these brigadier Macintosh of Borlum took possession, with his Highlanders, in the year 1715, only for one night: for finding that their friends were not in a condition to join them, and the king's troops preparing to attack them, they marched off to the earl of Winton's seat. This was at the time they had formed a correspondence with certain centinels of Edinburgh castle, for betraying it into their hands, and for which some were afterwards hanged. On the south shore of the Firth, and two miles above Leith to the west, also to Prestonpans downwards, and other towns, there is good fishing for oysters and mussels, which not only supply Edinburgh and the adjacent country, but many boat-loads of them are carried to Newcastle upon Tyne, &c. whence they return with glass-bottles, window-glass, and other heavy goods. The custom-house is at South Leith, but the commissioners have their office at Edinburgh. Leith was formerly a great check to the capital when king James IV. was there, who, to keep the citizens in better obedience, often threatened to remove his palace and court of judicature hither. The citizens of Edinburgh often come hither in coaches or a-foot, for a walk on the mole, or other recreations; and at the numerous inns are very good accommodations, and at a reasonable rate. The sea-faring people, and those concerned with them, are at Leith all alert and busy. It is a pleasant short walk from the Nether-bow down-hill to Leith, and on one side of the road are gibbets with malefactors hanging in chains. The hackney coaches carry passengers at certain hours to and from Leith at a very moderate expence. Latitude fifty-five degrees fifty-eight minutes north, longitude two degrees fifty-nine minutes west.

III. Linlithgowshire, or West Lothian, commences at the river Almon, about five miles west of Edinburgh. It has the Firth of Forth on the north, on the north-west it is bounded by Stirling-shire, and on the south

by Lanerk. It abounds in coals, lime-stone, and white salt, besides corn and pasturage. In the reign of James IV. of Scotland, a mine was discovered in this county, which produced a great deal of silver.

The earl of Hopeton has a seat in this county reckoned the finest in Scotland. It stands about a mile south of the Forth, near the ancient village of Abercorn, where the Roman wall commenced which reached to the Clyde. It is built much in the form of the Queen's palace, and has a fine prospect of the Forth, and all the country on each side.

The county town is Linlithgow. It is vulgarly called Lithquo, and the same which Ptolemy always styles Lindum, as lying upon the side of a lake. It is one in the district of royal burghs with Lanerk, Selkirk, and Peebles, which alternately send one member to the British parliament. Here is a royal palace, in an island towards the middle of the lake, which stands on a hill, with an ascent of several steps in the form of an amphitheatre. The palace is a magnificent structure of hewn stone, begun by former kings of Scotland, and finished by king James V. The porch bears the name and arms of James V. On the gate of the outer court are the arms of Scotland, enriched with the orders of the Garter, St. Andrew, St. Michael, and the Golden Fleece; of all which orders he was a companion, being sovereign of the second; the first he had from his uncle king Henry VIII. and the two last from the king of France and the emperor, then king of Spain. In the inner court, which is larger than that at Hampton-court, there is a very curious fountain adorned with statues and water-works, erected by the same king James V. as upon the fountain is the arms of Scotland and France in one escutcheon. At each of the four corners of this court is a tower with fine apartments.

Close by the palace is a church, commonly called St. Michael's, of very excellent workmanship, with a lofty steeple; to which the late earl of Linlithgow added an extremely neat chapel. This church is large, with a handsome seat for the king. There is a small and easy descent from the palace to the town of Linlithgow, where is a large square, in the middle of which is another curious fountain, exceeding in all respects that in the inner court of the palace, and running at so many different places, that about a dozen may be served with water at once. On the south side of this square is the Tolbooth, very neatly built of hewn stone, having a lofty steeple, in which are bells and a clock. Here the sheriff and magistrates hold their respective courts: and it is the seat of a presbytery, consisting of nineteen parishes. It has a large street, about half a mile long, from one end of the town to the other, and adorned with fair buildings; on each side are divers wynds or lanes, which lead to several pleasant gardens. The lake itself, which lies north of the town, is a mile in length, and a quarter of a mile in breadth, abounding with perch, trouts, and other sorts of fish; and between it and the palace are very fine terrace-walks. This town appears to have great business, with a harbour for all kinds of shipping, near the castle of Blackness; where is a custom-house, with other buildings for the use of merchants. Here is a considerable manufacture of linen, for whitening and bleaching of which the water of that lake is reckoned of so extraordinary a quality, that a vast deal of linen is brought hither from other parts of the country. This town has had the two-penny Scotch act on ale since 1722, and it was renewed in 1733. This town gave the title of earl to the Levingston family, who were hereditary keepers of the palace, and king's bailiff here: among other titles, they had that of hereditary constable of Blackness-castle. But the last earl of Linlithgow and Calender forfeited it in the year 1716. The earl of Muray, who was regent of Scotland in the minority of his nephew king James VI. was murdered here, by a musket-bullet which one James Hamilton, of Bothwell-haugh, shot at him out of a window, as he was riding through the town; to which inhuman act he had been instigated by the Popish faction in Scotland, who were for restoring the then dethroned queen Mary.

In the palace above-mentioned king James V. called a chapter

a chapter of his nobles, knights companions, and added a collar of thyme and rue to the order of St. Andrew, enjoining the thistle to be worn on their mantles in the center of the cross; upon which he changed the motto "En defence, to Nemo me impune laceffit;" and ordered a throne for the sovereign, and twelve stalls for as many knights of the order, to be erected in St. Michael's church: but on his sudden death after the battle of Solway, and the troubles which ensued, this order lay dormant, till king James VII. revived it in a blue ribbon; queen Anne restored it to the green: and his late majestic king George I. published statutes for it. This palace is the least decayed of any in Scotland. In the neighbourhood of this town are several monuments of antiquity; as an ancient order at Kipps, and near it several large stones erected in a circle with remains of old camps, great heaps of stones and antique graves, being near Severus's wall, which began at Abercorn, four miles north-east from Linlithgow, and running cross the country west to the Firth of Clyde, ended at Kilpatrick near Dunbarton; and in the neighbourhood also are the two Duni pacis. Linlithgow lies eighteen miles west of Edinburgh, and twelve east of Stirling.

It was in St. Michael's church in this town 1513, that an aged man dressed in green came to James IV. of Scotland, whilst he was at vespers, and told him that if he proceeded on his expedition against the English, it would prove fatal both to him and his kingdom. As soon as the king came out of the church he enquired for the man, but could not find him. The king persisted in his resolution, and in a few weeks after was slain at the battle of Flowden. About four miles from Linlithgow was the famous monument of antiquity, vulgarly called Arthur's Oven. It was a Roman temple or altar supposed to be erected to the memory of one of their commanders, who had been killed near the wall of Agricola, and buried at this place.

Opposite the Lothians is Fifeshire. It was anciently called the shire of Ross, which name is still preserved in Kinross, i. e. the head of Ross, and also in Culross, i. e. the back part of Ross, as the Highland words Kaan and Cuil import. The name of Fife it had, they say, from one Fifus a nobleman; to whom Kenneth II. gave it for his great services against the Picts in 840. His posterity were first called Thanes of Fife, which seems to have been the first title of nobility in that kingdom, and afterwards created earls by Malcolm III. about the year 1057, and endowed them with greater privileges than any other earls in the country. Of these the Great Macduff, who subdued the tyrant Macbeth, was the first, whose posterity had the privileges of placing the king at his coronation in the chair, heading the vanguard of the king's army, and of compounding for murder with cattle or money; of which Macduff's cross in Abernethy, in Perthshire, not Murrayland, is a monument denoting king's ministers, as is still retained in Denmark. The Sibbalds of Balgonie, and upon failure of that family, the earls of Rothes, were hereditary sheriffs of Fifeshire, till this, with the other jurisdiction of Scotland, was by a late act of parliament absorbed in the crown. Fifeshire is a fine fruitful peninsula, situated between the Firth of Forth and that of Tay; the former dividing it from the Lothians on the south, and the latter from Strathern, the Carse of Gowry, and the shire of Angus, on the north, and also from part of Perthshire and Clackmannanshire on the north-west. It is bounded on the west by the Ochil-hills, Kinrossshire, and part of Perthshire; and has the German ocean on the east. It is commonly reckoned thirty-two miles long, and about seventeen broad. The east part is level, and the west more mountainous. The north and south parts are very fruitful in corn, and full of small towns, but none of them so flourishing as their situation would promise, with good bays and harbours; but the middle is more proper for pasture, there being abundance of cattle, especially sheep, the wool of which is much valued, as are also the hides of their black cattle, deer, and goats, which turn to a good account.

On the south side, towards the coast of the Forth, they have many coal-pits, that produce the Scotch coal; also several salt-pans, where they make very good white salt. The Ochil-hills on the west afford good pasture, intermixed with corn-fields; and between them are pleasant fruitful valleys. At Dalgate is a quarry of excellent free-stone; and near the water of Ore they find lead, as also numbers of fine crystals of various colours at the Bin (Byne) a peak of the Ochil-mountains, and at Orrock (Orerock) a craig on the water of Ore. Here also are mineral springs, as the Spa at Kinghorn and Balgriggy. Its principal rivers are the Leven, issuing from a lough of its name, and the Eden, both abounding with salmon, &c. The little towns, mostly royal burghs, on this coast of the Forth are at least a nursery for seamen; and the sea, besides variety of white fish, herrings being caught in great quantities in August and September, yields plenty of oysters, and other shell-fish. No shire in Scotland sends so many members to the British parliament; for besides the representative for the county, it deposes three more for the like number of districts of royal burghs, only that of Stirling and Queensferry are included in one of them; and are in number thirteen royal burghs, eleven of which are all on the coast, but Dumfermling and Cowpar in the middle of the country, besides other towns of note: and in it are four presbyteries, namely Cowpar, St. Andrew's, Kirkaldy, and Dumfermling. This shire has also more nobility inhabiting it than any other part of Scotland: among other seats inland, are Kinross, Lesly, Melvil, and Balgonie; but the royal palace of Falkland is in ruins, as also the royal palace of Dumfermling.

Fifeshire is almost in the form of a peninsula, and contains more sea port towns than any other county in Scotland; and the interior part is likewise extremely populous. There are many Roman camps, besides Danish antiquities all over Fifeshire. Near Aberdour in this county, the Danes were totally defeated by the Scots in the year 970, and a monument erected, upon which was an inscription, testifying that the Danes had bound themselves by oath never more to invade Scotland. At Kinghorn in this county, king Alexander III. the last heir male of the Canmore family, was killed by a fall from his horse 1285, which occasioned a war that lasted above forty years.

Angus, though commonly so called, and by the genuine Scots Æneia, as by Buchanan Angusia, yet in the rolls of parliament it is always called Forfar, from its country-town of the same name. It is one of the shires in the middle division of Scotland, or in the north of Scotland, in contradistinction to the south. It is divided from Braemar on the north, by the ridge of the Binnchinnin mountains. It has the firth of Tay to the south, which parts it from Fife, along which firth or bay, and the German ocean, some part of it lies to the east. The water of Tarf, and a line drawn from thence to the water of North-esk, separate it from the shire of Mearns to the north and north-east, and it is divided by a line twenty-seven miles in length, from Perthshire, and the district of Gowry, on the west and north-west. It is twenty-nine miles from east to west, and sixteen and a half where broadest, from north to south, according to some; but Templeman makes it thirty-four in length, and twenty-six in breadth, with an area of five hundred and fifty square miles. This diversity of dimensions may possibly arise from the former being computed in Scottish miles, which are generally long, and vary according to the different places in Scotland where they are reckoned; and the latter in measured English miles, are near these. Angus seems to be marked in the maps as a grand district of Forfarshire, and is that part of it which lies contiguous to the Firth of Tay. The shire of Forfar, with regard to its civil government, for which the crown now nominates and appoints a sheriff, who has been admitted an advocate at Edinburgh, comprehends Angus with its pertinent, namely, Glen-ila, Glen-esk, and Glenprossin. The shire of Forfar or Angus, by the articles of the Union, sends

sends one member to the British parliament. With regard to the ecclesiastical matters, whilst Scotland was under episcopacy, part of Angus and Mearns constituted the diocese of Brechin, as Forfar did a presbytery then; and still continues so, since Presbyterianism has been established after the Revolution. Angus and Mearns, in conjunction, form now a provincial synod, which consists of six presbyteries, and those of eighty-five parishes. According to the division of Scotland by the Romans, Angus was a part of Old Caledonia; and it was anciently divided between the Scots and Picts; the latter of which possessed the low champaign part next to the sea, and the former the highlands, namely, that part of the Grampian mountains and interjacent valleys which lie in this shire. But upon the utter subversion of the Pictish monarchy, by a great battle which went against that people, in the reign of Kenneth II. king of Scotland, it came wholly into the hands of the victorious Scots.

Gordon in his *Itinerarium Septentrionale* through Angus takes notice of more Danish antiquities in this county than in any other in Scotland.

Before the extirpation of the Picts in 839, the seat of the Scottish sovereignty seems to have been confined to Argyleshire and the western islands, but after that period we find them constantly settled in Angus. It was at Glamis in this county that Kenneth III. contrived the scheme of setting aside the ancient manner of succeeding to the crown; and was afterwards murdered by a lady at Fettercairn, a few miles distant. At a lake near Forfar, Malcolm II. son of the above Kenneth was murdered 1032, at the instigation of some of the pretenders to the royal authority; and there it was that the famous Macbeth murdered king Duncan, and took possession of the throne. It was likewise at Dunfinan in Angus, that Malcolm Canmore defeated Macbeth in 1057.

This shire, particularly in the low parts, and towards the coast, produces wheat, and all other sorts of grain, as barley or bear, oats, rye, pease, vetches or fitches, and these in very great abundance; with large quantities of hemp and flax. It is beautifully diversified with large hills, fruitful dales, lakes, forests, pastures, and meadows; and beautified with many castles, noblemen's or gentlemen's seats; the forts, if any, being now only a heap of ruins. Here are several quarries of free-stone and slate, in which the inhabitants drive a considerable trade. It is a very good country all along the coast; but so narrow, that in some places it is not much above five miles broad, when one comes to high hills, which run in a chain to the west and north, particularly the above-mentioned Grampian mountains, which are inhabited by Highlanders. In these are mines of lead, particularly near the castle of Inner-mackie, and plenty of iron ore, near the wood of Dalboggy. The higher grounds, called the Brads, which that word in Erse properly signifies, abound with hart, hind, roe-buck, doe, and wild fowl: and their salmon-trade turns to a very good account, both in kits, in the same manner as pickled at Newcastle, but more especially as salmon are salted white in barrels, many lasts of which (twelve barrels making a last) are sent up the Streights, and to other Romish countries in Lent. It gives title of earl to the noble family of Douglas, duke of this last name, who was hereditary lord lieutenant of the shire before the late British act, which, for a valuable consideration, has vested this and the like family-privileges of Scotland in the crown. But before this, however, the sheriffalty was in the king's disposal, which is now commonly given to a Scottish advocate, as hath been before observed. One of the former earls of Angus hearing a rebellion against king James V. defended the castle of Tantallon against him. Some time before this, the Scottish nobility, at the head of whom was one of the earls of Angus, took the minions of king James III. forcibly out of his court, and hanged them over Lauder-bridge, near the royal burgh of the former name. A late author (Maitland), writing of this his native country, observes that the gentry of it, who are very numerous, were

universally enemies to the Union with England; and not so much Presbyterian, as they are in the southern parts of the kingdom. But with regard to both these particulars, the aversion against such things being commonly local and temporary, the keenness of the satire must be considerably abated, both in Angus and other parts of Scotland, in the south and north from a succession of years elapsing since the establishment of the Union and presbyterianism, besides many other concurrent and intervening causes, which contribute not only to combat strong prejudices, but even to reconcile men's minds to designs of national utility: and if not altogether to national uniformity in religion; yet even the latter too at length takes place, both among the gentry and commonalty; and this is well known to be the case at present.

The county-town, as has been mentioned above, is Forfar; but Dundee is the town of the greatest note in the whole shire. Besides these is Montrose, Aberbrothock or Arbroth, Brechin, and a remarkable place called Brochty-craig.

The next county on the west is Perthshire, of which Perth is the capital; it is a large and plentiful country, bounded on the north and north-west by Badenoch and Lochabar, on the west and south-west by Argyleshire, Lenox, and Dunbartonshire; on the south by Clackmananshire, part of Stirlingshire, and the river and firth of Forth; on the south-east by Kinross-shire and Fife; and on the East by Angus. Its greatest length is seventy-three miles, and greatest breadth fifty-nine, including the subdivisions of Monteith, Broadalbin, Athol, Strathern, part of Gowry, and Perth Proper.

It abounds both in corn and pasture; the former in the lower grounds, and the latter in the higher, especially that commonly called the Carse of Gowry. It is interspersed with groves, fruit-trees, woods, rivers, and lakes.

The principal rivers are, 1. The Tay, one of the largest in all Scotland, issuing from a capacious inland lake in Broadalbin. 2. The Keith and the Ern, rising from Lochern in Strathern: all which have a great accession of other streams by the way.

In this county are five presbyteries, containing eighty-eight parishes.

Perthshire next to Argyleshire is the largest in Scotland, and it was at Scone in this county that the Scottish kings were crowned, in memory of the battle obtained by Kenneth II. against the Picts, which put a period to their sovereignty. At Perth, the county-town, king James I. of Scotland, was barbarously murdered 1437; and at this place in 1560, the reformers first begun pulling down the churches.

Amongst the many curiosities to be met with in this county, the following account of the river Devon has been sent us by one who viewed it on the spot.

"The river Devon rises from a few springs in Perthshire, about two miles east of the Sheriff-mair, where the duke of Argyle defeated the rebel army 1715, after a course of about eight miles south-east, with a very rapid current, it turns westward, and empties itself into the Forth about two miles below Stirling. On this river about twenty miles north of Edinburgh, there is a stone arch called by the country people, The Rumbling Bridge, from the great noise made by the water, and which I heard at half a mile's distance. About half a mile above the bridge the river falls into a narrow channel, and gradually loses itself amongst a prodigious heap of great stones which have fallen from the adjacent rocks, and form as it were so many irregular arches; the rocks on each side are covered with small birch trees, and hazel bushes, so that the whole forms a very romantic appearance. That part where the bridge is built is only thirty feet broad, although fifty yards above the stream of the river, and at a distance looks like a plank laid across the roofs of the houses in a narrow street. About fifty years ago the old bridge fell in, and not one stone of it was seen afterwards. The present bridge was built 1725, as appears by an inscription on the west side.

“Half a mile below the bridge, where the river assumes its former shape, being released from its confinement amongst the rocks, I went to see a curiosity which differs only in magnitude from the cataracts of the Nile; for, according to the descriptions which I have read of them in Norden, Pocock, &c. the idea I have formed is every way similar to what I saw at this place.

“The river continues its course gradually, but more swift as it approaches nearer to a rock, over which it falls into another bed, destined for its reception. The current is so rapid, and the fall almost perpendicular, that at a little distance one would imagine it a spout projecting from the rock. The noise was so loud, and the appearance so dreadful, that it brought to my mind those celebrated lines of Shakspear.

—————How fearful,
And dizzy 'tis to cast ones eyes so low!
The crows and choughs, that wing the midway air,
Shew scarce so gross as beetles. ———
—————I'll look no more,
Lest my brains turn —————
And the deficient sight topple down headlong.

“The people call this cataract, the Carlons Lin (i. e.) the Witches Pool, a name given to it I suppose in those times of ignorance and priestcraft when the clergy found it their interest to propagate the stories of hobgoblins, &c.

“About a quarter of a mile south of the river, I went to see a cave, very ingeniously cut in a hard solid rock, called by the inhabitants the Witches Chamber. Near the upper part of a rising ground, a very steep precipice presents itself, to which you ascend by steps formed of stones, which have apparently fallen from the rock at different times. At the lower part of the rock, there is a flight of ten steps, and cut with great regularity. To examine the workmanship of the steps, I was obliged to remove some earth with which they were covered; but how great was my surprize when I was shewn a door which led into one of the handsomest chambers I had ever seen in such a place. The door measured three feet in height, and two feet broad, but from the appearance of the floor within, the passage has been much higher formerly. The cave is exactly twelve feet broad, and sixteen in length: there is a place cut for a fire, and a chimney cut through the rock, sixteen feet or upwards, by which, with the door, light is conveyed into the apartment. At one side, and adjoining to the chimney, is a place large enough for a bed. Great art and industry had been used before it was completed, and I think it could not be the residence of any ordinary person, and it was evident to me that it had been cut out of the rock many ages ago. I thought it was possible that there might be some traditional account amongst the people, which, although disguised with fiction, might lead to some probable conjecture; but all was in vain. However, I believe it to have been designed for some person, who, for reasons now unknown, chose to retire from the noise of a tumultuous world, and probably long before the establishment of christianity in those parts, as I could not find any marks of crosses, &c. but on the walls, which is generally the case in all the hermitages which I have seen. I have been the more particular concerning this peice of antiquity, as it is neither taken notice of by Horsley in his *Britannia Romanorum*, nor even by Gordon in his *Itinerarium Septentrionale*.”

The county town is sometimes called Perth, but more often St. John's Town, from a large church here dedicated to that saint. This is the capital of all Perthshire, in the north of Scotland; is a royal burgh; and in the district with Dundee, St. Andrew's, Cowpar, and Forfar, which send alternately one member to the British parliament. This is also the seat of the sheriff, and one of the second rank in the kingdom. It is governed by a provost and bailies, &c.

It is a genteel well-built place, between two meadows on the west bank of the Tay, and vessels of good burden can come up to it at full tide. Here Scottish parliaments have frequently been holden. King Robert

Bruce took it from the English in the reign of king Edward I. after a strong resistance.

It was the principal place of arms and rendezvous for the Highlanders in 1715, under the earl of Mar; and thither they retired after the defeat at Dunblain, till the duke of Argyle marched with the king's forces against them, upon which they fled with the old Pretender. In 1745 it was successively possessed by the Highlanders, under the young Pretender, and the king's troops: upon all which accounts it is said to have been considerably enriched, and its structures, both public and private, greatly increased.

The linen manufacture is much carried on in this place, and vast quantities of it shipped for England. The merchants trade considerably to Norway and the Baltic. It gave title of earl to one of the Drummond family, who was commonly stiled Duke.

The town consists of two principal streets, well paved and built, running east and west, besides lanes south and north. It is reckoned to be about twenty computed miles north of Edinburgh. Latitude fifty-six degrees, twenty-five minutes north; longitude three degrees sixteen minutes west.

Argyleshire is the largest county in Scotland, and much celebrated by the ancient bards. The poems of Ossian are supposed to have been written in this place; and it is remarkable, that the Roman arms never penetrated into any part of it. It is sometimes called the shire of Inverary, belonging to the West highlands, in the middle division of Scotland. This country, which was the first seat of the Scots, when they landed from Ireland with Fergus their king (if that was the first settlement in the country), did, together with Perthshire and the western islands, constitute the kingdom of the Scots, or Highlanders; while the rest of Scotland was under the Picts and Romans. It is called in Latin Argathelia, Argalia, from Argathel, according to Moll's Geographical System, or Arg-withil, (i. e.) ar upon or near, and Gwithil the Irish, because it lies towards Ireland, whose inhabitants were called by the Britons Gwithil and Gnothel: but it would rather seem to be from the Erse Ard-gael, (i. e.) the high grounds of the Scots, Ard denoting height, and Gael the Scots highlanders, as they are still called in their own language, Klannah-gael.

Argyleshire, besides that properly so called, comprehends the following districts and islands: namely, Cowal, Lorn, Knapdale, Cantyre, and Askeodnish, all on the continent, with the islands of Ila; to the west lie the small ones of Colonsa, Oronsa, and Jura; to the north of which is Scarba, Lefmore, or Lessimore, St. Columbus or I-collum kyle, Tyre-ty or Tyrree. Near these are the two little islands of Kerniberg, Coll, South-uist and North-uist, &c. All which islands, it is to be observed, make part of the western islands of Scotland, which are called Hebrides. To this shire, according to Collier, belong part of Lochaber, Morven, Suynart, and Ardemurchen.

It has the Irish sea and firth of Clyde on the south, Monteith, Lenox, and part of Perthshire, on the east, Lochabar on the north east, and part of Perthshire on the north, with several of the western islands to the west, and north west. The continuator of Camden makes Argyleshire one hundred and twenty miles in length, and forty in breadth: that properly so called, is about forty miles long, and four where narrowest. It had formerly two shires, namely, Argyle, and Tarbar or Tarbet, now united into one, and comprehending the several districts and isles above-mentioned. According to Templeman, the area of Argyle, Cowal, and Knapdale, is eight hundred and forty-eight square miles; Lorn, three hundred and eighty-four; Mull, four hundred and twenty; Ila, two hundred and ten; Arrian, one hundred and ninety-eight; Bute, twenty-seven; and Cantyre, two hundred and forty-five; in all two thousand four hundred and ninety-two. The General Atlas makes this country ninety miles from the Mull of Cantyre on the south, to Lochaber on the north, and seventy where broadest, including the isles. The sea in this country runs up in several places a pretty way inland,

land, forming long bays called loughs; at the head of which our maps mark no fresh rivers running into them, only the appearance of two or three at the end of Lough Fynn.

Argyleshire in general is mountainous, and the bulk of the middling sort of the inhabitants (all of them speaking Irish, or rather Erse, in some degree of its purity), live by feeding of cattle, fishing, and formerly by hunting. The coast, especially as far as Loch-fynn, is full of high rocks and black mountains, covered with heath or heather, which feed great numbers of black cattle, mostly running wild, together with deer and other game in abundance. The flesh of their cattle, though small, is excellent meat: and the fat, when melted, does not harden, (they say) contrary to what other tallow after running usually does, but continues some days like an oil. But why it should become hard then, and not as soon as it has cooled, the accounts do not say. The inhabitants sell vast numbers of their black cattle into the Low-countries in Scotland, and doubtless vast droves of them come from thence into England also.

The number of loughs, or rather bays and creeks made by the sea, are reckoned to be seven. These may be the principal; but, by looking into the map, there appear to be many more, particularly on the coast of Lorn, Knapdale, Cantyre, and Cowal: the most considerable of these are Lough Fynn and Lough Long.

Argyle, Cantyre, and Lorn, are part of the ancient Caledonia, or country possessed by Fergus's colony of Scots, in contradiction to that of the Picts.

Argyle (sometimes called Lismore, from an island of that name where its bishop resided, in the times of episcopacy, was a diocese under the archbishop of Glasgow, and comprehended Argyle properly so called, Lorn, Cantyre, and Lechaber, with some of the western isles; the remainder of the Hebrides having been, under the bishop of the isles, who is prelate of Sodor and Man. The presbyteries were Denune (sometimes also the bishop's residence), Innerara, Cambelton, Kilmore, and Lorn. Now under presbyterianism, instead of the bishop, is the provincial synod of Argyle, containing five presbyteries, and under these forty-nine parishes. The principal place of Argyleshire is the royal burgh of Innerara.

Argyle for a long time gave title of earl, at present of duke, and in queen Anne's reign was added that of Greenwich in England, to the honourable family of Campbell, who are chiefs of the clan of that name, and descended (we are told) from the ancient and heroic kings of Ulster in Ireland.

The following account of the noble family of Argyle is very remarkable.

"The country of Argyle hath for a long time belonged to the chief of the Campbells, to whom it gives the title of duke, a family whose name denotes their valour, as signifying the field of war, Campus belli; nor has their behaviour been at any time unanswerable to it. He is the first earl in Scotland; and, besides the title of Argyle; is Lord Cantyre, Campbell, and Lorn; the last of which gives always title to the eldest son of the family, which makes a great figure in Scotland; because of the greatness of their clan, number of their vassals, honourable allies, and hereditary offices, such as Justice General of the shire of Argyle and the isles, lord lieutenant and sheriff of Argyle, heritable master of the household (i. e. hereditary lord steward of the house) to the king, and several other offices within his own bounds. They were justice-generals of all Scotland, till by contract betwixt Charles I. and the marquis of Argyle, then lord Lorn, in the year 1628, he resigned that office into the king's hands, and got secured to himself and his posterity to be justice-general of Argyle and the isles, and wherever he had lands in Scotland. But it is here to be observed, that these hereditary jurisdictions, at least in civil and criminal affairs, have all in Scotland been vested in the crown by a late act of the British parliament, and that for valuable considerations in lieu of them. (*Our account goes on.*) The

chief of the Campbells, one of the said earl's predecessors, in September 1300, made that famous indenture, yet extant, with Sir Alexander Seaton, and Sir Gilbert Hay; whereby they bind themselves to stand to their utmost to the defence of their sovereign lord king Robert Bruce, as well against French and English, as Scots; subscribed with all their hands, and sealed at Cambuskenneth. He honourably entertained and assisted their said king Robert against Baliol; and, for his good services, the king gave him Marjorey Bruce his own sister in marriage. His son assisted king David Bruce in his minority, joined with the lord Robert Stewart, one of the king's royal predecessors, defeated the English at Deunne, and took that castle from them; for which the king made him hereditary-governor of the said castle, allowing him a yearly pension; and created his cousin John Campbell, earl of Athol, who died without succession. King James I. (of Scotland) being detained eighteen years a prisoner in England, one of the said earl's predecessors, whose eldest son was married to the daughter of Robert Duke of Albany, and sister to duke Munloch the governor of Scotland, improved that opportunity so effectually for the advantage of the said king James I. that he prevailed with the governor to ransom and restore him to his father's throne. Colin, earl of Argyle did constantly adhere to king James II. who in his younger years was reduced to great straits by those who conspired against his authority; but was settled on the throne by this earl's assistance: for which good service he made him lord high chancellor of Scotland, and gave him several lands. Gilespicus (Gilespic) or Archibald, earl of Argyle, was killed at Flodden-field, as fighting valiantly for king James IV. Colin, earl of Argyle, was one of the three that governed Scotland in king James V.'s minority; and the only man able to make head against the Douglasses, being commissioned for that effect. Archibald, earl of Argyle, was lord high chancellor in queen Mary's reign; a great promoter of the Reformation, and opposer of the French tyranny, and then current persecution. Colin, earl of Argyle, his son and successor, was also lord chancellor of Scotland in king James VI's reign. Archibald, earl of Argyle, was in 1641 created marquis, joined with the parliament of Scotland, was a zealous asserter of the Presbyterian government, looked upon as one of the greatest statesmen of his time, contributed much to the reception and coronation of Charles II. in Scotland; and put the crown upon his head: yet after the restoration, anno 1661, he was condemned and beheaded, upon an indictment for alledged compliance with Oliver, being the epitemical fault of that time. He declared himself innocent on the scaffold. Archibald, his son, when lord Lorn, commanded king Charles II.'s foot-guards, signalized himself against Oliver, and never capitulated, till he was ordered to do so by the king: yet was forfeited also, but soon after restored to the title of earl; and condemned again in the latter end of Charles II.'s reign for explaining the test in these words, "I have considered the test; and am desirous to give obedience as far as I can. I am confident the parliament never intended to impose contradictory oaths; and therefore I think no man can explain it, but for himself; and reconcile it, as it is genuine, and agrees in its own sense. And I take it in so far as it is consistent with itself and the Protestant religion. And I do declare, I mean not to bind up myself in my station; and in a lawful way to endeavour any thing I think to the advantage of church or state; not repugnant to the Protestant religion and my loyalty. And this I understand as part of my oath." But escaping from the castle of Edinburgh (his estate being disposed of to others) he got over into Holland; whence with a few men he landed in Scotland, in the beginning of the late king James (VII. of Scotland, II. of England) his reign, a little before the duke of Monmouth landed in England. But having never got above two thousand men together, was defeated, taken, and beheaded at Edinburgh; June the thirtieth, 1685, upon the sentence of explaining the test. His zeal for the Protestant religion,

religion, and against introducing of Popery, was said to be the cause of his fall. He was reckoned an accomplished statesman, and a great soldier. His son Archibald came over with the prince of Orange, and was very instrumental in the Revolution in Scotland, and owned as the earl of Argyle by the parliament, before they took off the attainder against his father; which, by the claim of right, was declared to be a reproach to the nation. His lordship was sent from the nobility, with other two commissioners, from the barons and boroughs, to offer the crown of Scotland, in the name of the convention of the states of that kingdom, to their majesties king William and queen Mary; for whose service he carried over a regiment to Flanders, consisting mostly, both officers and soldiers, of his own name and family. His eldest son, (afterwards John duke of Argyle) was a youth of great expectation: concerning whom it is remarkable, that, when he was but five years old, he jumped out of a window three stories high (some say he fell that height out of his nurse's arms), without receiving any hurt; and, as near as can be calculated, it happened in the very minute that his grandfather suffered.—This account was given by the late lord's direction. Besides this note in Jer. Collier, which is annexed to the account above recited, towards the end of the preface to the second edition, corrected and enlarged to the year 1688, this author adds: "I have gone no further in time than the year 1688; so that whatever the reader meets with of a fresher date, is either the remainder of the old English edition, or else continued by some other hand, at the instance of the undertakers. The article Argyle is an exception of what I have said; and therefore, with all due regard to a noble family, I am obliged to declare, that, had that article been printed as I left it, it would have appeared with some alteration."

To enter into a discussion of that matter seems quite foreign to a work of this kind; and therefore we shall proceed.

This family has had the honour to match with the royal family, as has been shewn in some measure above, and others of the greatest note in Scotland; are possessed of several royalties (but these have been lately ceded to the crown, as has been already mentioned), and have abundance of vassals; each of whom is obliged, by virtue of an old tenure and ancient right, that whenever a daughter of this family is married, to pay her portion; for which purpose a tax is laid on them, according to the number of cattle they possess.

The late John duke of Argyle was a nobleman of a very popular character, and celebrated both in his military and political capacity: but his brother, the late duke, before well known under the name of Archibald, earl of Ila, was as distinguished for his own great knowledge in literature of all kinds, and in politics, as he was remarkable for his liberal encouragement of the arts and sciences, and the professors of them in every denomination.

This shire has many ancient castles and gentlemen's seats in it, most of which are possessed by branches of the Argyle family; and some of this name are said at least to be of equal, if not greater antiquity, than that which, as has been partly shewn before, is noted for having suffered much on account of its steady adherence to the Protestant religion, and the liberties of their country, especially from the Reformation to the Revolution.

This is that particular country in the Western islands of Scotland, which a certain person, in king James II.'s time, called the kingdom of Argyle, complimenting that prince, in a high strain of court-flattery, upon his having conquered two kings, when he suppressed the duke of Monmouth, whom, in derision, they called the little king of Lyme in Dorsetshire, and the earl of Argyle, to whom they gave, with much more propriety, the title of the Great King of the Highlands.

To this account of the noble family of Argyle we may add, that when earl Archibald was restored by the convention who presented the claim of rights, the reversion of title was granted to the heirs male of his

brother, John Campbell, of Manmore: and when in 1701, he was advanced to the title of duke, the same reversion was continued, as a reward for their many great services done in defence of the liberties of their country: Accordingly the two late dukes, sons of the above, both dying without male issue, the title descended to John Campbell, of Manmore, lately dead, and is now enjoyed by his son the present duke, married to the duchess dowager of Hamilton, by whom he has several children. His grace is likewise a peer of England, colonel of the first, or royal Scotch regiment of foot, and commander in chief of the forces in North-Britain.

Next to Argyle is Inverness-shire, one of the northern counties of Scotland, the town of which name is commonly reckoned the key into the North Highlands: and here, from Athol and Badenoch, the view of high mountains and hills continues north and north west. It formerly contained, we are told, all the country from the borders of Lorn in the West Highlands to the isles of Orkney, along the western coast of Scotland, and the isles likewise there. The sheriffdom was then hereditary in the family of Gordon; but now it is lodged in the king, and long ago circumscribed in much narrower limits. It contains that part of Murrayland which lies near Inverness, Strathpaine, Strathderin, Strathspey, together with Badenoch, to the Stratherrick; Lochaber on the west, the Aird on the north west, and the Laird of Glenmoriston's country on the north side of Lochness, as also the Isle of Skey, &c. It is bounded on the west by Ross-shire, or rather the adjacent part of Murray-shire, and that called Beuley firth, separating both shires: it has Nairnshire on the east; the Western or Deucalionian sea on the west, with Lorn, Broadalbin, and Athol, on the south. Its extent from east to west is about sixty miles; and from north to south fifty-five where broadest.

The county town is Inverness, originally Innerness, which, and Innerlochy, says Buchanan, denote harbours or places for vessels to land at: but if this be true, then all the places above-mentioned, and all others in Scotland with the same prefix of Inner, commonly pronounced Inver, have plainly the same derivation, as harbours were not much resorted to, nor shipping common in more early days. It rather seems to be a dwelling-place or habitation upon the Ness, as if *Eight Innue ar Ness*: so that the Tour's definition, "a town on the inner bank of the river Ness," cannot be admitted.

This is the principal town in the north of Scotland, and next to New Aberdeen, if not nearly on an equality with it, is the second best town of the north, and of the second class in the whole kingdom; being much larger than Perth or Montrose, and its buildings more stately and spacious. It lies about half a mile from the bottom of Murray-firth, and south west of that of Beuley; the river Ness being here not above three miles from the mouth of Lochness.

This is a very old royal burgh, and of earlier date than Dingwall, as the charter of the latter by king Alexander III. expressly grants it the same privileges as his town of Inverness, but does not mention these in it; and consequently Inverness must be prior. This is in the same district of boroughs with Forres, Nairn, and Fortrose, which by turns send one member to the British parliament. Its weekly market is on Friday, and very plentiful for flesh, fish, fowls, eggs butter, &c. though every day, but Sundays, is a peat-market. Here are five or six annual fairs, as at Martinmas, Candlemas, Rodmas, &c. The sheriff, and commissary, or judge for probation of wills, hold their courts here; and it is the seat of a presbytery, consisting of eleven parishes, including the three ministers of Inverness. It stands mostly on the south side of the Ness, over which is a handsome toll-bridge of hewn red stone from Red-castle, and consisting of seven arches. In one of the pillars of it is a prison called the vault, that looks through an iron-lattice window into the river. On the entrance to it next the Brigg-street, is an inscription, that it was erected about the close of queen Anne's reign. The Smith of Forres being the present site of

current of the Nefs here is rapid and high when swelled by the freshes in autumn and spring, the town is obliged every year to give it a thorough coating of lime, and insert stones with iron cramps where the force of the water has blemished or broke them out; and often by the force of the water the bridge shakes very much. The town is almost of a crucial form, though only the East-street and Brigg-street are in a direct line, from which the Castle-street, and Kirk-street somewhat deviate. The center of the town is pretty open, with genteel houses all around; and in the little area of the cross, which is walled round, grows an apple-tree with fruit; on which, after the battle of Culloden, some men were hanged. The buildings in this town have greatly increased within these few years from the ruins of the Sconce, being lofty, and of stone. The Kirk-street is of all the widest and best situated, the others being crowded up something by the adjacent hillocks, particularly the Castle-street; close to which stands that anciently called the Castle of Inverness, where several of the Scottish kings resided, or at least came frequently in their circuits for administering of justice, or quelling commotions among the Highlanders; the duke of Gordon being constable of several lands holding of it: the last who resided here was Mary queen of Scots, who also had a town-house in the Bridge-street, late Shipland's; over the entrance to which may still be seen her arms, with towers and turnpikes.

In the Castle-street is another old house with towers also, and over the entrance a remarkable inscription about the fifteenth century, "Feare God and a Robertson." The town has several lanes called vennails, and the same as wynds at Edinburgh. The magistracy of this burgh consists of a provost and four bailies, &c. Here are six incorporate trades under their respective deacons or wardens, and one of these is chosen annually deacon-conveener; who, with two more deacons, are adopted into the town-council.

These built a very large and grand house in the Kirk-street, not far from the church, called the Trades-house: and in this street are also many other lofty and elegant buildings. This town has had the two-pennies Scots act renewed several times; but it yields nothing now, in comparison with what it did a few years after its commencement in the year 1719. Here are two churches contiguous, called the Lowland or High-kirk, and the Highland or New-kirk; in the former the worship is performed in English, and in the latter in Erse; and the three ministers officiate in them alternately.

In the English church is a small, but neat Carrara marble tablet, with a Latin inscription in memory of the pious Dr. William Hay, the last bishop of Murray.

In the Highland kirk a curiously carved pulpit, by a mechanic of the town, pretty much attracts the eye. As the two-pennies act has failed of producing what was expected from it, only the English church has been repaired and new-plated. At the end of the Kirk-street is the suburb called the Fisher-town; next to that is the chapel-yard, a place of interment, over the entrance into which is the town-motto in large capitals (their arms being two camels) as a standing memento and necessary lesson to the living, who are not very famous for their unanimity, the venerable dead being already at rest: *Concordia res parvæ crescunt, discordia dilabuntur*. The other place for burying, and appropriated for some particular families, lies behind the church, where was anciently a monastery of Grey-friars; which latter name it still retains, and part of one of its pillars is still standing. They bury also in the church-yard.

The monuments of some in these burying-grounds are pretty neat according to the country-manner; but the inscriptions generally have nothing striking. Beyond the chapel-yard is the shore, where are both the old and new piers, but hardly any vessels in them, except two or three small barks that trade chiefly to London. The commodious situation of this place for an American trade is not improved. Further on is the Sconce or Cromwell's citadel, which was formerly a very handsome pentagon,

with draw-bridges, ditches, and high ramparts; great numbers of buildings within the area, and very regular streets or causeways; all which captain Skinner, of the Board of Works, traced. Here was kept a strong garrison all Cromwell's days: but upon the restoration it was demolished, and the ground given to the earl of Murray, who since sold it to the town. Some part of Inverness lies on the north side of the river, with the suburbs of the Little and Muckle Green; in the latter of which is commonly a Latin school. The town has also a grammar-school, in the form of an academy. One great improvement is the draining of a lough at the back of the town, levelling the ground, and also making all the avenues to it from the adjacent hillocks commodious for carriages: and this is intended for a market-place. The greatest benefactors to this town were Provost Alexander Dunbar, who left them the building called the Hospital, where is kept the grammar-school and the library; he, and Mr. George Duncan, a merchant of this place, &c. augmented that charity with considerable sums of money and lands; from the produce of which decayed burghers are maintained. Here is likewise one of Mr. Raining of Norwich's charity-schools, with a handsome salary for two masters: and a very elegant structure has lately been erected by the town upon the Barnhills, as a school-house, and dwelling for the head master. The other suburbs of Inverness are Castlehill's barony, and the Haugh.

A little north west of the town is a remarkable detached or insulated hill, called Tomnahurich: it resembles a large man of war overturned; and just by is a very high hill called Thor-a Vain, or Bean's hill; and that hero's burying-ground or chapel, sited Kyle-a-vain, lies below it. About three quarters of a mile out of town eastward, are two remarkable eccentric circles, called Achna-glach; now Stony-field. The most westerly stone of one of the circles is of prodigious magnitude; all the rest in this circle diminishing gradually to a very small bulk. The east circle is of very small stones: they seem to be mountain, or rock stones, and must have been carried a pretty way thither, as none such are to be seen within five or six miles of that neighbourhood: as there is a well just by, abounding with water, it should seem to have been some druidical temple, Pictish or Scottish monument for the dead, or some such thing of very high antiquity. Two miles from hence, still eastward, is the castle of Culloden; one of the seats of the late President Forbes, and on the level Muir, about a mile above it, was fought the battle of Culloden, in April 1746, in which the young Chevalier, his Highlanders, &c. were entirely defeated by the duke of Cumberland.

The river Nefs produces excellent salmon, and in great quantity; the four principal quarters of which, as belonging to the like number of burghers, who are proprietors of this fishery, are now rented by a company in London; upon their first supplying the consumption of the town at a certain price. The fish is taken by nets, dropt in select places of the river from a small flat-bottom'd vessel called a coble, and when entangled in the net, and brought on shore, the fishermen knock them on the head with a little stick or a stone that comes next to hand: and some they catch with harpoons (spears having two or three prongs) after they have got into wooden frames called Kists, conveniently laid and standing high on some particular parts of the river; or into the cofacks.

The women in this town are remarkably handsome, and as genteel as any in the most southerly parts of the island, making a very elegant appearance on a Sunday, or when dressed to appear in public. This place, particularly all round the cross, is full of merchants who deal in all sorts of home, but chiefly English goods, with tobaccos; and most of them trade in brandies, rum, &c.

Murray, or rather Motrey-land, the country of the ancient Moravii, is a large and pleasant tract in the north of Scotland, including the shires of Elgin and Nairn. It is a plain along the coast for upwards of thirty miles, very rich and fertile, the harvest being generally

generally early, and beginning about the close of July. It has some good towns in it, with several gentlemen's seats.

This country gives title of earl to one of the Stuart family, a descendant from the first earl of Moray, originally an abbot, afterwards regent of Scotland, and natural son of king James V. This is a tempestuous firth at times, and though in most places a dangerous rocky coast, it has several good havens on both sides. The mountainous and more barren parts of Moreyland are called Bramorrey, in which are Stradern, Stranairn, and other hilly tracts.

The title of earl of Murray was originally in the family of Gordon, but when the earl of Huntly was slain in battle by James, the natural son of James V. of Scotland, 1562, the title was given by queen Mary to the said James, her natural brother, together with the whole of the estate. When that princess fled into England, 1567, the earl of Murray was chosen regent of Scotland. His conduct has been differently represented by writers; but it is generally allowed that he was a very oppressive tyrant. The Hamilton family, as adhering to the captive queen, were singled out as objects of his vengeance. Having seized on the estate of a gentleman of that name, he turned his lady naked into the fields in a cold winter evening, where she actually perished. The husband swore revenge against the regent, and to effectuate this purpose, concealed himself in a house in Linlithgow, through which he knew the earl was to pass, and shot him dead in the street.

Rosshire is one of those northern counties in Scotland originally inhabited by the Picts, who were, without doubt, a part of the Ancient Britons, who, like the Caledonians, fled northward, in order to avoid the slavery imposed upon the Belgic Britons by the Romans. It was in those parts that even barbarians preferred liberty to slavery, and every year sallied forth in multitudes, to oppose the lawless force of tyranny, and chastise their countrymen in the south part of the island, for their mean abject submission to licentious robbers. The many walls erected by the Romans to prevent their incursions, will remain a lasting honour to their memory, as long as the British annals are read.

It is extremely well watered (hence its appellation) with rivers, and inland lakes, being intersected also by several bays or firths, which are branches of the Murray firth, in the German ocean, the latter lying on the north, and north-east; as also by those formed by the great Western ocean on the west, the country reaching quite both ways from east to west. It has Invernessshire, from which Bewley firth separates it, also part of the Isle of Sky, on the south and south-west, and Sutherlandshire with Eterdashowle in Strathnaver on the north. Its form is very irregular, being above fifty miles from north to south on the west side, and about sixty where longest, from east to west, but of unequal dimensions both ways, and in consequence variously reckoned.

It includes the peninsulas of Tayne, Cromartie, (though this be a distinct shire, which alternately with that of Nairn, sends one member to parliament) as also Ardmearach, a continuation of Cromartie.

Its largest town is Tayne, a royal burgh; as are Dingwall and Channery, both of them now venerable for their antiquity; and by turns the sheriffs courts are held in all three. These are the only towns in this shire.

Caithness, Cathness, or Welk, a shire of Scotland, and the most northerly of the main-land of that kingdom. It was once, according to Moll, part of the shire of Sutherland; but distinguished from it since the Union, by the return of a member to the British Parliament, which it does alternately with the shire of Bute, in the West-Highlands, or Western islands. The natives call it Gallow in their language, which has seemingly an affinity with Gaelic, i. e. Highlanders; and in most of the parishes they speak Eise, or a corrupted dialect of the Highland language, as well as broad Scotch. It has the German ocean on the east. Strathnaver and the shire of Sutherland, from which it is divided by Mount

Ord, and a range of hills, as far as Knocklin, as also by the water of Hallowdale, on the south and south-west; and on the north it is divided from the Orkneys by Pentland firth. It comprehends all the country beyond the river Ness, and the lough, or bay, into which it flows, not that near Inverness. So that all the tract to the east of the Ord-mountains was called Châtey-nessé, and afterwards Cath-nessé. It is thirty-five miles from north to south, and about twenty in breadth. Templeman, who extends it above six miles in both dimensions, gives it an area of six hundred and ninety square miles.

Here are a few woods of birch; but these are little better than coppices; and what trees they have are not so large as further south; so that they are forced to be supplied with timber from the neighbouring and more inland counties. In the forests, or heathy wastes of Mohrvin and Berrydale, is great plenty of red deer, and roe-bucks; and they have good store of black cattle, sheep, goats, and wild-fowl. At Dennet they have lead, at Old Urk copper, and iron ore in several parts. But little or no use is made of these natural advantages, since they work none of the minerals. The principal support of the inhabitants is from grazing and fishing. They have corn also; which, though a smaller grain, is very prolific, particularly their barley, which they call bear, and oats; a good deal of which, besides what they expend in home-consumptions, both in grain and oatmeal, used to be exported, especially to Inverness.

The people are so industrious in some places, particularly along the coast from Weik to Dunbeth, which is an interval of twelve miles, where there is no harbour, or bay, but a continued tract of hard rugged rock, have made little creeks, by art, for their fishing-boats to lie in; also passages like steps down from the rock to the bottom, and at top have built themselves houses or huts, to which they carry up their fish, and there salt and dry them fit for the market: and so make as much money of their fish as others do of their land. Here are several old chapels, like those to be met with in the Orkneys and Shetland, which are much resorted to by the superstitious ignorant people; and besides these are no less than three-score heaps of stones, supposed to be the reliques of paganism, or rather sepulchral monuments in a field of battle, to which the people resort with adoration, according to Mr. Brand; but it looks in other places more like some degree of compassionate notion for the deceased, never failing to throw each a stone to increase the heap, before they part.

The two principal towns of Caithness are Wick, which is a royal burgh; and Thurso, a burgh or barony. Stoma, or Stroma, is an island belonging to this shire in Picland-firth.

Orkneys, in Latin, Orcades, a stewartry or district in the north of Scotland, which including, together with the Orkney-isles, those of Shetland, are the most northerly parts of that kingdom, and send one member to parliament; besides Kirkwall the capital of Orkney, being one in the district of royal burghs, sends alternately another member.

The common language is the Scottish, or hard dialect of English; and some of the ancient people among them speak the Norns, Norse, or Norwegian tongue. On account of the resort of strangers among them for commerce, or in their way to America, they are generally a polite sort of people, and the men and women affect to dress gay, in imitation of their foreign visitants.

The coasts of these islands very much abound with fish, particularly herring; and our British buxles, together with those of the Dutch, resort thither in the season for carrying on the fishery. The women here are also handsome, and great knitters of stockings, some of which are made very fine. Their ewes are prolific, bringing forth sometimes three or four lambs; and some of their women bear at sixty-three.

They were anciently governed by their own kings, but reduced under the dominion of the Scotch, soon after these had subdued the Picts. The Normans, or a colony of Norwegians, made themselves masters of these islands in the year 1099, a few years after the invasion
